Preface to the XVI Annual Volume

OF THE

Indian Year Book, 1929.

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of arrangement must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before October have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

Preface to the XVI Annual Volume

OF THE

INDIAN YEAR BOOK, 1929.

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of arrangement must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before October have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

The Times of India, Bombay,
January, 1929.

An Indian Glossary.

ABKARI.—Excise of liquors and drugs.

ACHHUT.—Untouchable (Hindi) Asuddhar.

ADHIRAJ.—"Lord of the Lands:" added to "Raja," &c., it means "paramount."

AFSAR.—A corruption of the English "officer."

AHLUWALIA.—Name of a princely family resident at the village of Ahlu, near Lahore.

AIN.—A timber tree TERMINALIA TOMENTOSA.

AKALI.—Originally, a Sikh devotee, one of a band founded by Guru Govind Singh (who died 1708): now, a member of the politico-religious army (*dal*) of reforming Sikhs.

AKHARA.—A Hindu school of gymnastics.

AKHUNDZADA.—Son of a Head Officer.

ALIJAH.—Of exalted rank.

ALIGHOL.—Literally a Mahomedan circle. A kind of athletic club formed for purposes of self-defence.

ALI RAJA.—Sea King (Laccadives).

AM.—Mango.

AMIL.—A name given in Sind to educated members of the Lohana community, a Hindu caste consisting principally of bankers, clerks and minor officials.

AMIR (corruptly EMIR).—A Mohammedan Chief often also a personal name.

ANICUT.—A dam or weir across a river for irrigation purposes, Southern India.

ANJUMAN.—A communal gathering of Mahomedans.

APHUS.—Believed to be a corruption of ALPHONSE, the name of the best variety of Bombay mango.

ARZ, ARZI, ARZ-DASHT.—Written petition.

ASAF.—A minister.

ASPRISHYA.—Untouchable (Sanskrit).

AUS.—The early rice crop, Bengal, syn. Ahu, Assam.

AVATAR.—An incarnation of Vishnu.

AYURVEDA.—Hindu science of Medicine.

BABA.—Lit. "Father," a respectful "Mr." Irish "Your Honour."

BABU.—(1) A gentleman in Bengal, corresponding to Pant in the Deccan and Konkan. (2) Hence used by Anglo-Indians of a clerk or accountant. Strictly a 5th or still younger son of a Raja but often used of any son younger than the heir, whilst it has also grown into a term of address=Esquire. There are, however, one or two Rajas whose sons are known respectively as—1st, Kunwar; 2nd, Diwan; 3rd, Thakur; 4th, Lal; 5th Babu.

BABUL.—A common thorny tree, the bark of which is used for tanning, ACACIA ARABICA.

BADMASH.—A bad character: a rascal.

BAGH.—Tiger.

BAGHLA.—(1) A native boat (Buggalow). (2) The common pond heron or paddybird.

BAHADUR.—Lit. "brave" or "warrior"; a title used by both Hindus and Mohammedans, often bestowed by Government; added to other titles, it increases their honour but alone it designates an inferior ruler.

BAIRAGI.—A Hindu religious mendicant.

BAJRA OR BAJRI.—The bulrush millet, a common food-grain, PENNISETUM TYPHOIDEUM; syn. cambu, Madras.

BAKHSHI.—A revenue officer or magistrate.

BAND.—A dam or embankment (Bund).

BANYAN.—A species of fig-tree, FICUS BENGALENSIS.

BARSAT.—(1) A fall of rain, (2) the rainy season.

BASTI.—(1) A village, or collection of huts; (2) A Jain temple, Kanara.

BATTA.—Lit. 'discount' and hence allowances by way of compensation.

BAZAR.—(1) A street lined with shops, India proper; (2) a covered market, Burma.

BEGUM or BEGAM.—The feminine of "Nawab" combined in Bhopal as "Nawab Begum."

BER.—A thorny shrub bearing a fruit like a small plum, ZIZYPHUS JUJUBA.

BESAR.—Apparently a large landowner.

BEWAR.—Name in Central Provinces for shifting cultivation in jungles and hill-sides; syn. taungya, Burma; jhum, North-Eastern India.

BHADOI.—Early autumn crop, Northern India, reaped in the month Bhadon.

BHAGAT OR BHAKTA.—A devotee.

BHAG-BATAI.—System of payment of land revenue in kind.

BHAIBAND.—Relation or man of same caste or community.

BHANG.—The dried leaves of the hemp plant, CANNABIS SATIVA, a narcotic.

BHANWAR.—Light sandy soil; syn. bhur.

BHARAL.—A Himalayan wild sheep, OVIS NAHURA.

BHARAT.—India.

BHARATA-VARSHA.—India.

BHENDI.—A suculent vegetable (HIBISCUS ESCULENTUS).

BHONSLE.—Name of a Maratha dynasty.

BHUP.—Title of the ruler of Cooch Behar.

BHUGTI.—Name of a Baluch tribe.

BHUSA.—Chaff, for fodder.

BHUT.—The spirit of departed persons.

Note.—According to the Hunterian system of transliteration here adopted the vowels have the following values:—a either long as the a in 'father' or short as the u in 'cut,' e as the ai in 'gain,' i either short as the i in 'bib,' or long as the ee in 'feel,' o as the o in 'bone,' u either short as the oo in 'good,' or long as the oo in 'boot,' ai as the i in 'mile,' au as the ou in 'grouse.' This is only a rough guide. The vowel values vary in different parts of India in a marked degree.

BIDRI.—A class of ornamental metalwork, in which blackened pewter is inlaid with silver, named from the town of Bidar, Hyderabad.

BIGHA.—A measure of land varying widely; the standard bigha is generally five-eights of an acre.

BIR (BID).—A grassland—North India, Gujarat and Kathiawar.

BLACK COTTON SOIL.—A dark-coloured soil, very retentive of moisture, found in Central and Southern India.

BOARD OF REVENUE.—The chief controlling revenue authority in Bengal, the United Provinces and Madras.

BOR.—See BER.

BRINJAL.—A vegetable, SOLANUM MELONGENA; syn. egg-plant.

BUNDER, or bandar.—A harbour or port.

BURUJ.—A bastion in a line of battlements.

CADJAN.—Palm leaves used for thatch.

CHABUK.—A whip.

CHABUTRA.—A platform of mud or plastered brick, used for social gatherings, Northern India.

CHADAR.—A sheet worn as a shawl by men and sometimes by women. (Chudder.)

CHAITYA.—An ancient Buddhist chapel.

CHAMBHAR (CHAMAR).— A caste whose trade is to tan leather.

CHAMPAK.—A tree with fragrant blossoms MICHELIA CHAMPACA.

CHANA.—Gram.

CHAPATI.—A cake of unleavened breads (Chaupatti.)

CHAPRASI.—An orderly or messenger, Northern India; syn. pattawala, Bombay; peon, Madras.

CHARAS.—The resin of the hemp plant. CANNABIS SATIVA, used for smoking.

CHARKHA.—A spinning wheel.

CHARPAI (charpoy).—A bedstead with four legs, and tape stretched across the frame for a mattress.

CHAUDHRI.—Under native rule, a subordinate revenue official; at present the term is applied to the headman or representative of a trade guild.

CHAUKIDAR.—The village watchman and rural policeman.

CHAUTH.—The fourth part of the land revenue, exacted by the Marathas in subject territories.

CHAVR (CHORO, GUJARATI).—Village headquarters.

CHELA.—A pupil, usually in connexion with religious teaching.

CHHAONI.—A collection of thatched huts or barracks; hence a cantonment.

CHHATRAPATI.—One of sufficient dignity to have an umbrella carried over him.

CHHATRI.—(1) An umbrella, (2) domed building such as a cenotaph.

CHIEF COMMISSIONER.—The administrative head of one of the lesser Provinces in British India.

CHAIKOR.—A kind of partridge, CACCABIS CHUCAR.

CHIKU.—The Bombay name for the fruit of ACHRAS SAPOTA, the Sapodilla plum of the West Indies.

CHINAR.—A plane tree, PLATANUS ORIENTALIS.

CHINKARA.—The Indian gazelle, GAZELLA BENNETTI, often called 'ravine deer.'

CHITAL.—The spotted deer, CERVUS AXIS.

CHOLAM.—Name in Southern India for the large millet, ANDROPOGON SORGHUM; syn. jowar.

CHOLI.—A kind of short bodice worn by women.

CHOWRIE.—Fly-whisk.

CHUNAM, chuna.—Lime plaster.

CIRCLE.—The area in charge of—(1) A Conservator of forests; (2) A Postmaster or Deputy Postmaster-General; (3) A Superintending Engineer of the Public Works Department.

CIVIL SURGEON.—The officer in medical charge of a District.

COGNIZABLE.—An offence for which the culprit can be arrested by the police without a warrant.

COLLECTOR.—The administrative head of a District in Regulation Provinces corresponding to the Deputy Commissioner in non-regulation areas.

COMMISSIONER.—(1) The officer in charge of a Division or group of Districts; (2) the head of various departments, such as Stamps, Excise, etc.

COMPOUND.—The garden and open land attached to a house. An Anglo-Indian word perhaps derived from 'kumpan,' a hedge.

CONSERVATOR.—The Supervising Officer in charge of a Circle in the Forest Department.

COUNCIL BILLS.—Bills or telegraphic transfers drawn on the Indian Government by the Secretary of State in Council.

COUNT.—Cotton yarns are described as 20's, 30's, etc., counts when not more than a like number of hanks of 840 yards go to the pound avoirdupois.

COURT OF WARDS.—An establishment for managing estates of minors and other disqualified persons.

CRORE, karor.—Ten millions.

TARAI.—A moist swampy tract; the term especially applied to the tract along the foot of the Himalayas.

TARI, toddy—The sap of the date, palmyra, or cocoanut palm, used as a drink, either fresh or after fermentation In Northern India the juice of the date is called Sendhi.

TASAR, tussore.—Wild silkworms, ANTHERAEA PAPHIA; also applied to the cloth made from their silk.

TAZIA.—Lath and paper models of the tombs of Hasan and Husain, carried in procession at the Muharram festival; syn. tabut.

TEAK.—A valuable timber tree in Southern and Western India and Burma, TECTONA GRANDIS.

RAJ RAJESHWAR.—King of Kings.

RAMOSHI.—A caste whose work is watch and ward in the village lands and hence used for any chaukidar (*q. v.*) Actually a criminal tribe in Maharashtra.

RANA.—A title borne by some Rajput chiefs, equivalent to that of Raja.

RANI.—The wife or widow of a Raja.

RANZA.—Mausoleum, shrine.

RAO.—A title borne by Hindus, either equivalent to, or ranking below that of Raja.

REGAR.—Name for a black soil in Central and Southern India, which is very retentive of moisture, and suitable for growing cotton.

REGULATION.—A term formerly applied to certain provinces to show that the Regulations or full code of legislation applied to them.

REH.—Saline or alkaline efflorescences on the surface of the soil, Northern India.

RESERVED.—Forests intended to be maintained permanetly.

RICKSHAW.—A one or two seat vehicle on two wheels drawn by coolies, used in the hills.

RISALDAR.—Commander of a troop of horses.

ROHI-ROZ.—Nilgai.

ROHU.—A kind of fish, LABEO ROHITA.

ROTI.—Bread.

ROZA.—Muslim fast during Ramazan.

RYOTWARI.—The system of tenure in which land revenue is imposed on the actual occupants of holdings.

SADHU.—A Hindu Ascetic.

SADR, sudder.—Chief (adjective). Hence the headquarters of a District; formerly applied to the Appellate Courts.

SAFA JANG—A long-handled battleaxe carried by Jat Sikhs.

SAFFLOWER.—A thistle which yields a yellow dye from its petals and oil from its seeds (CARTHAMUS TINCTORIUS), ver. kardai, kushanti.

SAHEB.—The Native Hindu term used to or of a European (" Mr. Smith " would be mentioned as " Smith Saheb," and his wife " Smith Mem-Saheb," but in addressing it would be " Saheb," fem. " Saheba," without the name); occasionally appended to a title in the same way as " Bahadur," but inferior (=master). The unusual combination " Nawab Saheb " implies a mixed population of Hindus and Mohammedans.

SAHIBZADA.—Son of a person of consequence.

SAID, SAYID, SAIYID, SIDI, SYED, SYUD—Various forms for a title adopted by those who claim direct male descent from Mohammed's grandson Husain.

SAL.—A useful timber tree in Northern India SHOREA ROBUSTA.

SAMBAR.—A deer, CERVUS UNICOLOR; syn. sarau.

SAN.—Bombay hemp, CROTALARIA JUNCEA.

SANAD—(1) A charter or grant, giving its name to a class of States in Central India held under a sanad, (2) any kind of deed of grants.

SANGATHAN.—Literally tying together. A movement which aims at unity and the knowledge of the art of self-defence among Hindus. Roughly similar to Fasciemo.

SANNYASI.—A Hindu mendicant.

SARI.—A long piece of cloth worn by women as a shawl.

SARANJAM.—Land held revenue free or on a reduced quit-rent in consideration of political services rendered by the holder's ancestors originally feudal tenure land for maintaining troops.

SARDAR (corrupted to SIRDAR).—A leading Government official, either civil or military, even a Grand Vizier. Nearly all the Punjab Barons bear this title, It and " Diwan " are like in value and used by both Hindus and Mohammedans. So, but Mohammedans only, are " Wali," " Sultan," " Amir," " Mir," " Mirza," " Mian," and " Khan."

SARKAR.—(1) The Government; (2) a tract of territory under Muhammadan rule, corresponding roughly to a Division under British administration.

SARSUBAH.—An officer in charge of a Division in the Baroda State corresponding to Commissioner of British territories.

SATI.—Suicide by a widow, especially on the funeral pyre of her husband.

SAHUKAR, SAUKAR, SOWKAR.—Banker, dealer in money, exchange etc.; money lender.

SATYAGRAHA.—(lit.) One possessed by the truth; one who follows the truth wherever it may lead. (Commonly used to denote the passive resistance movement.)

SATTA.—Speculation.

SAUDAGAR.—Merchant.

SAWAI.—A Hindu title implying a slight distinction (lit. one-fourth better than others).

SAWBWA.—A title borne by chiefs in the Shan States, Burma.

SEMAL or cotton tree.—A large forest tree with crimson flowers and pods containing a quantity of floss, BOMBAY MALABARICUM.

SEROW, sarau.—A goat antelope, NEMORHAEDUS BUBALINUS.

SETH, SHETH.—Merchant, banker.

SETTLEMENT.—(1) The preparation of a cadastral record, and the fixing of the Government revenue from land; (2) the local inquiry made before Forest Reserves are created; (3) the financial arrangement between the Government of India and Local Governments.

SHAHID—A martyr.

SHAHZADA.—Son of a King.

SHAIKH or SHEIKH (Arabic)—A chief.

SHAMS-UL-ULAMA.—A Mohammedan title denoting " learned."

SHAMSHER-JANG.—" Sword of Battle " (a title of the Maharaja of Travancore.)

SHANBHOG.—See PATWARI.

SHASTRAS.—The religious law-books of the Hindus.

SHEGADI, seggaree.—A pan on 3 feet with live charcoal in it.

SHER, ser, seer—A weight, or measure varying much in size in different parts of the country. The Railway ser is about 2 lbs.

SHETH, shethia.—A Hindu or Jain merchant.

SHIGURAM.—See TONGA.

SHISHAM or sissu.—Blackwood. A valuable timber tree. DALBERGIA SISSOO.

SHRUTI.—Literally "heard". Vedas revealed to inspired Rishis.

SHUDDHI.—Literally purification. A movement started in Rajputana and Northern India for the reconversion to Hinduism of those, like the Malakhana Rajputs, who, though Mahomedans for some generations, have retained many Hindu practices.

SIDI.—A variation of "Said."

SILLADAR.—A native trooper who furnishes his own horse and equipment.

SINDHIA.—See under "Gaekwar."

SMRITI.—Unrevealed Laws, as opposed to Shruti-revealed Vedas.

SOLA.—A water-plant with a valuable pith, AESCHYNOMENE ASPERA.

SONI, SONAR.—Goldsmith.

SOWAR.—A mounted soldier or constable

SRI OR SHRI.—Lit. fortune, beauty, a Sanscrit term used by Hindus in speaking of a person much respected (never addressed *to* him; nearly = "Esquire"): used also of divinities. The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*).

SRIJUT, SRIYUT.—Modern Hindu equivalent of "Mr."

STUPA or tope.—A Buddhist tumulus, usually of brick or stone, and more or less hemispherical, containing relics.

SUBAH.—(1) A province under Mahomedan rule: (2) the officer in charge of a large tract in Baroda, corresponding to the Collector of a British District; (3) a group of Districts or Division, Hyderabad.

SUBAHDAR.—(1) The governor of a province under Mahomedan rule; (2) a native infantry officer in the Indian Army; (3) an official in Hyderabad corresponding to the Commissioner in British territory.

SUB-DIVISION.—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector.

SULTAN.—A King.

SUNNAT.—Traditional law followed by Sunnis.

SUPARI.—The fruit of the betel palm, ARECA CATECHU.

SUPERINTENDENT.—(1) The chief police officer in a District; (2) the official in charge of a hill station; (3) the official, usually of the Indian Medical Service, in charge of a Central Jail.

SURTI.—Native of Surat, specially used of persons of the dhed caste who work as house servants of Europeans, and whose house speech is Gujarati.

SWAMI.—A Hindu religious ascetic. Also applied to Shankaracharyas, Mahants of Maths, etc.

SYCE, sais.—A groom.

SYED, SYUD.—More variations of "Said."

TABLIGH.—The Mahomedan conversion movement.

TABUT.—See TAZIAH.

TAHSIL.—A revenue sub-division of a District; syn. taluka, Bombay; taluka, Madras and Mysore; township, Burma.

TAHSILDAR.—The officer in charge of a tahsil; syn. Mamlatdar, Bombay; township officer, or myo-ok, Burma; Mukhtiarkar, Sind; Vahivatdar, Baroda. His duties are both executive and magisterial.

TAKAVI.—Loans made to agriculturists for seed, bullocks, or agricultural improvements; syn. tagai, Bombay

TAL.—Lake; Musical time.

TALATI.—Village accountant.

TALAV, or talao.—A lake or tank.

TALUK, taluka.—The estate of a talukdar in Oudh. A revenue sub-division of a District, in Bombay, Madras and Mysore; syn. tashil.

TALUKDAR.—A landholder with peculiar tenures in different parts of India. (1) An official in the Hyderabad State, corresponding to the Magistrate and Collector (First Talukdar) or Deputy Magistrates and Collectors (Second and Third Talukdars); (2) a landholder with a peculiar form of tenure in Gujarat.

TALPUR.—The name of a dynasty in Sind.

TAMAKHU, TAMBAKU.—Tobacco.

TAMTAM, tumtum.—A North Indian name for a light trap or cart.

TANK.—In Southern, Western, and Central India, a lake formed by damming up a valley, in Northern India, an excavation holding water.

TANZIM.—Literally "organization." A movement among the Mahomedans which aims at securing better education and a closer approach to unity among Mahomedans in India.

TAPEDAR.—See PATWARI.

TARAI.—A moist swampy tract; the term especially applied to the tract along the foot of the Himalayas.

TARI, toddy—The sap of the date, palmyra, or cocoanut palm, used as a drink, either fresh or after fermentation In Northern India the juice of the date is called Sendhi.

TASAR, tussore.—Wild silkworms, ANTHERAEA PAPHIA; also applied to the cloth made from their silk.

TAZIA.—Lath and paper models of the tombs of Hasan and Husain, carried in procession at the Muharram festival; syn. tabut.

TEAK.—A valuable timber tree in Southern and Western India and Burma, TECTONA GRANDIS.

TELEGRAPHIC TRANSFERS.—See Council bills.

UMBAR.—A wild pig—(FICUS GLOMERATA).

UNIT.—A term in famine administration denoting one person relieved for one day.

URDU.—Hindustani Language as spoken and written by Musalmans opposed to Hindi, spoken and written by Hindus.

URIAL.—A wild sheep in North-Western India, OVIS VIGNEI.

URID, UDID.—A pulse, 'black grain' (PHASEOLUS MUNGO).

USAR.—Soil made barren by saline efflorescence, Northern India.

USTAD.—Master, teacher, one skilled in any art or science.

VAHIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda; syn. tahsildar.

VAID or baidya, Bengal.—A native doctor practising the Hindu system of medicine.

VAKIL.—(1) A class of legal practitioners; (2) an agent generally.

VEDA.—Revealed sacred books of Hindus.

VEDANTA.—The philosophy of the Upanishads.

VIHARA.—A Buddhist monastery.

VILLAGE.—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish.

VILLAGE UNION.—An area in which local affairs are administered by a small committee.

WADA or WADI.—(1) An enclosure with houses built round facing a centre yard; (2) private enclosed land near a village.

WAKF.—A Muhammadan religious or charitable endowment.

WALI.—Like "Sardar." The Governor of Khelat is so termed, whilst the Chiefs of Cabul are both "Wali" and "Mir."

WAO.—A step well.

WATAN.—A word of many senses. In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Government or to the village community.

WAZIR.—The chief minister at a Mahomedan court.

WET RATE.—The rate of revenue for land assured of irrigation.

YAMA.—Hindu god of death.

YOGA.—A system of Hindu philosophy; Practice of breath control etc., said to give supernatural powers.

YOGI.—A Hindu ascetic who follows the yoga system, a cardinal part of which is that it confers complete control over the bodily functions enabling the practiser, for instance to breathe in through one nostril and out at the other.

YUNANI.—Lit. Greek; the system of medicine practised by Mahomedans.

ZABARDAST.—Lit. "Upper hand," hence strong, oppressive.

ZABARDASTI.—Oppression.

ZAMINDAR.—A landholder.

ZAMINDARI.—(1) An estate; (2) the rights of a landholder, zamindar; (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord.

ZANANA.—Of women.

ZIARAT.—Pilgrimage. Ziarat-gah, any shrine or tomb to which people go in pilgrimage.

ZILA.—A District.

ZOR-TALABI.—Tribute paid to Junagadh Darbar by numerous Kathiawar States.

ZULM, ZULUM.—Tyranny, Oppression.

The Peoples of India.

It is essential to bear in mind, when dealing with the people of India, that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical type of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical charactrestics have been evolved locally. They have been displaced in the North-West by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the North-East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Risley (Caste, Tribe and Race, Indian Census Report, 1901; the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negritos may be disregar ded.

The Turko-Iranian, represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. Probably formed by a fusion of Turki and Persian elements in which the former predominate. Stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentous length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir, and having as its characteristic members the Rajputs, Khattris, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful, head long; nose narrow, and prominent, but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani, found in the United Provinces, in parts of Rajputana, and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture, in varying proportions, of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group, and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans, while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian, or Bengali type of Lower Bengal and Orissa, comprising the Bengal Brahmins and Kayasthas, the Mahomedans of Eastern Bengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad; complexion dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in India, and its members may be recognised at a glance throughout the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid type of the Himalayas, Nepal, Assam, and Burma, represented by the Kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim; the Limbus, Murmis and Gurungs of Nepal; the Bodo of Assam; and the Burmese. The head is broad; complexion dark, with a yellow tinge; hair on face scanty; stature short or below average; nose fine to broad, face characteristically flat; eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean; the complexion very dark, approaching black; hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear

flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest-clad ranges, terraced plateau, and undulating plains which stretch roughly speaking, from the Vindhyas to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is conterminous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo Aryan or Mongoloid people, the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, of Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

The areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly; and although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise clearly enough that the physical characteristies of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

MAIN STATISTICS OF THE INDIAN EMPIRE.

The Indian Empire has an area of 1,805,332 square miles, about 3,000 square miles being added at the last census owing to the enumeration by estimate of certain tracts in Burma which had been excluded from previous censuses.

Of the total area 1,094,300 square miles, or 61 per cent. lie in British Territory, while the Indian States cover an area of 711,032 square miles, or 39 per cent. The total population is 318,942,480, British Territory containing 247,003,293 persons, or 77 per cent., and the Indian States 71,939,187 persons, or 23 per cent. of the whole population. It is usual to illustrate these figures by comparison with the countries of Europe and in respect of area and population the Indian Empire has been frequently compared to Europe without Russia. The war has, however, considerably altered the national and political distribution of countries and the new political map of Europe is perhaps hardly yet sufficiently familiar to form a graphic contrast. Turning further west we find that India with an area about half that of the United States has a population almost three times as large.

The most important statistics are set out in the following table :—

——	India.	British Provinces.	Indian States.
Area in Square Miles	1,805,332	1,094,300	711,032
Number of Towns and Villages	687,981	500,088	187,893
(*a*) Towns	2,316	1,561	755
(*b*) Villages	685,665	498,527	187,138
Number of Occupied Houses	65,198,389	50,441,636	14,756,753
(*a*) In Towns	6,765,014	5,046,820	1,718,194
(*b*) In Villages	58,433,375	45,394,816	13,038,559
Total Population	318,942,480	247,003,293	71,939,187
(*a*) In Towns	32,475,276	25,044,368	7,430,908
(*b*) In Villages	286,467,204	221,958,925	64,508,279
Males	163,995,554	126,872,116	37,123,438
(*a*) In Towns	17,845,248	13,971,136	3,874,112
(*b*) In Villages..	146,150,306	112,900,980	33,249,326
Females	154,946,926	120,131,177	4,815,749
(*a*) In Towns..	14,630,028	11,073,232	3,556,796
(*b*) In Villages	140,316,898	109,057,945	31 258,953

Density.—Over the whole of India the population per square mile averages 177, the mean density in the British Provinces being 226 and in the States 101. If the districts (and small States) are taken as a unit, and the cities are excluded, the mean density ranges between a minimum of 1 and a maximum of 1,882 per square mile. The unequal distribution of the population of India is due to causes analysed in previous editions of the Year Book; it is chiefly dictated by physical conditions. Other influences are at work, such as the state of law and order, the means of communication, climate, and the existence of irrigation. Indusarial factors are becoming more and more important as the population moves out of the congested rural tracts to supply the labour needed for industrial enterprise—for the tea in Assam, the docks and jute mills of Calcutta, the mineral of Bengal and Chota Nagpur, the cotton of Bombay and the coffee and rubber of Southern India. For the purposes of comparison the manner in which the population is distributed in other countries of the world is indicated in the following statement :—

Belgium	654
England and Wales	649
France..	184
Germany	332
The Netherlands	544
Austria	199
Spain	107
Japan	215
United States	32
New Zealand	1·18

MOVEMENT OF THE POPULATION.

The population of India has increased by 1·2 per cent. during the decade. The figures of previous censuses with the variations per cent. are given below. The average increase since the census of 1872 falls at a rate of 5·5 per cent., but the real gain is considerably less than this figure owing to two factors, (*a*) the additions of area and population included at each census and (*b*) the progressive increase in the accuracy of the enumeration from census to census. So far as the present census is concerned the additional area and population included amount to 2,675 square miles and 86,533 persons, respectively, while for the present purpose it may be taken that the enumeration of 1921 was, as regards numbers, as accurate but not more accurate than that of 1911. The real increase in the population during the last 49 years is thus estimated at about fifty-four millions or 20·1 per-cent.

Census of	Population.	Variation per cent. since previous census.
1872	206,162,360	—
1881	253,896,330	+23·2
1891	287,314,671	+13·2
1901	294,361,056	+ 2·5
1911	315,156,396	+ 7·1
1921	318,942,480	+ 1·2

Factors in the Movement.—The increase was slightly greater in the British districts (1·3) than in the States (1·0). Assam and Burma show comparatively high rates of increase; immigration is an important factor in the rise in Assam, but neither of these Provinces was exposed to the invasion of influenza which wiped off the whole of the natural increase in the Central Provinces and Berar, Bihar and Orissa, and Bombay, and substantially reduced the population in the United Provinces and Rajputana, the Central India Agency, and Hyderabad State. The stimulus given to agricultural prosperity in the Punjab by a large expansion of canal irrigation did much to neutralise the effects of the high death rate in 1918. In Bengal and Madras unhealthy conditions were more localised and the development of the population was only partially retarded.

The War.—The war itself had little direct effect on the population of India. Such effect could operate in three ways (1) by death casualties, (2) by increasing the number of persons outside India at the census, and (3) by decreasing the birth-rate. The actual number of death casualties among the officers and ranks of Indian Army units and labour corps was 58,238. The maximum number serving out of India in combatant and labour units at any one time between 1914 and 1919 was, approximately, Indian troops 250,000, labour corps 230,000, total 480,000; the number about the time of the census being troops 105,000, labour corps 20,800, total 125,800. So far as the larger totals are concerned the war is not a direct factor of any importance in the census in any province.

Economic Conditions.—In considering the economic factors which determined the movement of the population during the decade it can be divided into two periods, a fairly normal period from 1911 to 1917 and the disastrous epidemic year 1918, accompanied by scarcity and followed by a second crop failure in 1920. In 1917 conditions in India began to respond to the world conditions of the war, men for the fighting and labour units and food, munitions and war material of all kinds were demanded. The strain on the railway organisation dislocated the local markets and the distribution system of the country was impaired. The rising prices of imported necessities hit the poorer classes. Then followed the disastrous seasons of 1918 and 1919. Famine relief organisation is now so highly perfected in India that scarcity is not necessarily accompanied by high mortality but influenza, starting in 1918, visited almost every portion of the country and in a few months wiped out the natural increase in the population of the previous seven years.

Public Health.—The distinctive feature of the decade 1901-1911 was plague. The recorded number of deaths from plague in the ten years was 6½ millions. In the recent decade the deaths were less than half that number. Cholera is normally most prevalent in the Eastern Provinces.

Virulent as the epidemic can still be when its hold is established it is now usually of a temporary and local nature, and the total death-rate in British India from the disease during the decade did not amount to more than 1·5 per cent. By far the largest number of deaths

in India are entered under the category of "fever," and allowing for inaccuracy of diagnosis it has usually been assumed that about two-thirds of the deaths so recorded may be ascribed to malaria. Recent investigations made in special areas, however, suggest that this proportion has been considerably overestimated and that malaria only accounts for from one-fifth to one-fourth of the number of reported fever cases, the remainder being cases of dysentery, pneumonia, phthisis and other diseases.

In the last few years the prevalence of an affection which is the cause of considerable mortality called *Relapsing Fever* has received considerable attention by the Health Department. This disease has been diagnosed as common in most parts of the country, specially in the northern provinces and in the Central Provinces and Berar and Bombay, but the extent of the mortality which can be ascribed to it cannot at present be estimated. Nor can figures be given of phthisis which is undoubtedly responsible for considerable mortality; especially in the towns of western India, the deaths from this disease in Ahmedabad amounting in 1918 to 5 per mille of the population. All other factors in the health of the people have been overshadowed by the influenza epidemic of 1918 and 1919 which has dominated the population figures at the 1921 census.

Influenza :—The influenza epidemic of 1918 invaded India in two distinct waves. The first infection apparently radiated from Bombay, but it is impossible to say where the more virulent virus of the second invasion came from.

The rural areas were most severely infected, the reason probably being that while villages have little advantage over towns in the matter of overcrowding, sanitation and ventilation the urban areas have the benefit of qualified medical aid and organised effort. Mortality was specially high among adults (20-40), particularly among adult females, the disease being generally fatal to women in pregnancy. At the worst period whole villages were absolutely laid desolate by the disease. There was sometimes no means of disposing of the dead, crops were left unharvested and all local official action was largely paralysed, owing to the fact that the majority of the official staff were put out of action by the epidemic. To add to the distress the disease came at a period of widespread crop failure and reached its climax in November when the cold weather had set in; and, as the price of cloth happened at the time to be at its highest, many were unable to provide themselves with the warm clothing that was essential in the case of an illness that so readily attacked the lungs. The disease lasted in most provinces well into 1919 and gave a high mortality in that year in Bengal and the United Provinces. Even after it had subsided there were in the Central Provinces, Bombay and Burma mild recrudescences later in the year, while local outbreaks continued over the country during the next two years.

There is no direct means of ascertaining the mortality from the epidemic. Various estimates have been made based on the excess mortality over some suitable mean. The average of these calculations gives a total number of deaths in the areas under registration of about 7,100,000 in 1918, to which must be added, as the results of similar calculation, another 1½ million deaths in 1919, giving a total recorded mortality of nearly 8½ millions in the two years. Even this, however, must be a substantial underestimate since, owing to the complete breakdown of the reporting staff, the registration of vital statistics was in many cases suspended during the progress of the epidemic in 1918.

The total influenza mortality for India is put at between 12 and 13 millions. This is a conservative estimate. Even this estimate makes the influenza mortality, a large part of which occurred in three or four months, exceed by nearly two millions the total estimated deaths from plague in twenty years. On an estimated case mortality of ten per cent. the total number of persons affected was 125 millions or two-fifths of the population of India. There was a further reaction on the birth rate.

Houses and Families.—The average number of persons per house has not changed in the last decade, though there was a decline between 1881 and 1911. The trend of the figures varies in different provinces, but they do not afford substantial ground for any material inference. It would, for example, be expected that the incidence of the influenza mortality would fall fairly evenly upon the individual households and would therefore cause a reduction in the number of persons per house. It does not appear to have done so either in Bombay, the United Provinces, the Central Provinces, or Rajputana, while in Bengal, where there is a rise in the population, there is a fall in the size of the household. The figures are unsatisfactory, and though they invite a discussion on the condition of the joint family it is doubtful if they can really be held to illuminate it. The general opinion of the Provincial Superintendents is that they do not do so and that other indications do not show that the joint family system has yet undergone any radical change, at any rate in the agricultural tracts of the country.

Census.	Persons per house.	Houses per square mile.
1921	4·9	36·1
1911	4·9	35·8
1901	5·2	31·6
1891	5·4	33·9
1881	5·8	31·7

NOTES.—

(1) The figures for the Provinces are inclusive of the States attached to them except in the case of Madras where they exclude Cochin and Travancore.

(2) The Actual and Natural population shown in this table is less by 56,500 persons owing to the exclusion of Aden where Table XI was not compiled.

(3) Columns 2 and 6—Persons not enumerated by birth-place or whose birth-place was not returned have been included in these columns.

(4) Columns 4 and 8—The figures against India in columns 4 and 8 represent emigrants to foreign countries, details of which for 1921 will be found in Subsidiary Table V of Chapter III.

AREA OF INDIA AND THE PROVINCES AND STATES.

Future Population of India.—A study of the growth of the population of India and the problems which it presents is vitiated by the abnormal conditions of the past decade. It was pointed out in the census report of 1911 that the rate of increase of population between 1872 and 1911 was equivalent to about 19 per cent., and that at this rate the population would double itself in about a century and a half. The real increase in the last fifty years in the population of India is just over 20 per cent. At this rate the doubling will take another 190 years. But calculations of this kind, though of interest, can hardly be taken seriously. Almost every one of the last five decades has witnessed some special disaster. A severe famine in South India checked the increase in the decade 1872-1881. The decennium 1891-1901 was dominated by the great famines of the closing period. Growth in Northern and Western India was checked in the succeeding decade by plague and we have had in the past decennium an epidemic which has caused more concentrated mortality than any previous calamity. The decade 1881-1891 alone was free from any exceptional calamity and is usually considered a period of fairly normal progress.

Difference between the birth-rate and death-rate estimated by the actuary for certain provinces in certain decades.

TOWN AND COUNTRY.

The progress of urbanisation in India—if there has been any progress at all—has been very slow during the past thirty years, the whole increase being less than one per cent. An examination of the statistics shows that whilst towns with populations above 50,000, increased by over 16 per cent. in the decade, the increase was considerably less in those between 5,000 and 50,000, whereas the population of towns between 10 to 20 thousand did not keep abreast of the progress of the general population of the country. The statistics reveal the gradual decadence of the medium-size country town and the growth of the larger cities under the influence of commercial and industrial development

DISTRIBUTION OF POPULATION IN GROUPS OF TOWNS ACCORDING TO SIZE AND IN RURAL TERRITORY.

Rawalpindi and Cantonment	101,142	11,802	532	+17·0

In these statistics the population of Calcutta is taken as embracing the suburbs, and this method is apparently adopted in dealing with Calcutta only. It is not, for instance, adopted in dealing with the considerable suburbs of Bombay just outside the limits of the Island. The actual population of Calcutta within the Municipal area is 885,815.

Migration.—Of the population of the Indian Empire only 603,526 were enumerated as born in other parts of the world. Of these about four-fifths came from other Asiatic countries, such as Nepal, Afghanistan, China, Siam, Ceylon, and Arabia and the remainder mostly from Great Britain and other countries of Europe. The emigration from India is approximately 1·7 million, so the numbers who move between India and other countries is about two millions. Of the total immigrant population of 707,000 in Burma 573,000 are Indians, 102,000 Chinese, representing 80 and 15 per cent. respectively of the whole number. Of the Provinces which contribute most largely to the streams of migrants the most conspicuous are Bihar and Orissa, about 1½ million, the United Provinces about 1 million, Madras ⅗th of a million, Rajputana 3-5th of a million and Hyderabad 1-6th of a million. The number of persons resident in India who were born outside the Indian Empire is 603,526 and of these 274,000 were born in Nepal, 116,000 in the British Isles, 108,000 in China and 48,000 in Afghanistan.

The statistics of emigration outside India are far from complete.

The number of Indians belonging to regiments and labour-corps outside India at the time of the census was about 125,000. Of these the majority were probably in Mesopotamia and Palestine. According to the returns the number of Indians in the colonies, irrespective of birth-place, amounts to 1,662,000, of whom 1,028,000 or about two-thirds are males. More than four-fifths are Hindus and about half of the remainder are Musalmans. The colonies which attract an appreciable number of emigrants are shown below. About one-ninth of the emigrants failed to specify their province of birth, and of the remainder no less than 841,000 or 80 per cent. were from Madras, 24,000 from Bombay, 18,000 from the Punjab, 17,000 from the North-West Frontier Province and 11,000 from Bengal. The majority of the emigrants work as agricultural labourers on rubber, tea, coffee and other plantations. Under the Defence of India Rules indentured labour emigration was stopped in March 1917, but there had been a considerable outflow of labourers to the colonies in the previous years and more than 2·4 millions of natives of India passed through the ports of Madras and Calcutta as indentured labourers for the various colonies during the decade. Of the labourers 33,000 went from Calcutta, but the bulk were from the Madras Presidency and their destination was Ceylon and the Straits Settlements. There is very little emigration from the ports of Bombay and Karachi. Altogether about two million labourers returned to India from the colonies during the decade.

RELIGIONS.

The subject of religion is severely controversial in India, where often it is coloured by politics and racialism. As the Year Book aims at being impartial, all disputed inferences are excluded. Speaking broadly, of every hundred persons in the Indian Empire 68 are Hindus, 22 Mahomedans, 3 Buddhists, 3 follow the religion of their tribes, one is a Christian and one a Sikh. Of the remaining 2 one is equally likely to be a Buddhist or a Christian, and the other most probably a Jain, much less probably a Parsi and just as possibly either a Jew, a Brahmo, or a holder of indefinite beliefs. The enumerated totals of the Indian religions are set out in the following table:—

Religion.	Actual number in 1921. (000's omitted.)	Proportion per 10,000 of population in 1921.	Variation per cent, (Increase + Decrease—). 1911-1921.
Indo-Aryan	232,723	7,362	+ ·1
Hindu	216,735	6,856	— ·4
Brahmanic	216,261	6,841	— ·5
Arya	468	15	+92·1
Brahmo..	6	·2	+16·1
Sikh	3,239	103	+ 7·4
Jain	1,178	37	— 5·6
Buddhist	11,571	366	+ 7·9
Iranian [Zoroastrian (Parsi)]	102	3	+ 1·7
Semitic	73,511	2,325	+ 4·2
Musalman	68,735	2,174	+ 5·1
Christian	4,754	150	+22·6
Jew	22	·6	+ 3·8
Primitive (Tribal)	9,775	309	— 5·1
Miscellaneous (Minor Religions and religions not returned)	18	1	—51·5

The Hindus largely predominate in the centre and south of India, and in the Madras Presidency they are no less than 89 per cent. of the population. Hindus are in the majority in Assam, Bihar and Orissa, the United Provinces, the Central India tracts, Rajputana and Bombay. Muhammadans monopolize the North-West Frontier Province, Baluchistan and Kashmir and are considerably in excess in the Punjab and Eastern Bengal and Sind. They form about 28 per cent. of the population of Assam, 14 per cent. in the United Provinces and 10 per cent. in Hyderabad. The Buddhists are almost entirely confined to Burma where they are 85 per cent. of the population. The Sikhs are localized in the Punjab and the Jains in Rajputana, Ajmer-Merwara and the neighbouring States. Those who were classed as following Tribal Religions are chiefly found in Bihar and Orissa, the Central Provinces and Assam, but Bengal, Burma, Madras, Rajputana, Central India and Hyderabad also returned a considerable number under this head. More than three-fifths of the total number of Christians reside in South India including the Hyderabad State. The remainder are scattered over the continent, the larger numbers being returned in the Punjab, the United Provinces, Bengal, Bihar and Orissa, Burma, Bombay and Assam. The Parsis and Jews are chiefly residents of the Bombay Presidency.

Christians.—The Christian community now numbers just 4¾ millions of persons in India or 1½ per cent. of the population. Fifty-nine per cent. of Christians are returned from the Madras Presidency and its States, and the community can claim 32 persons in every 1,000 of the population of the British districts of Madras and as large a proportion as 27 per cent. in Cochin and 29 per cent. in Travancore, where the increase during the decade was about 30 per cent. Elsewhere the Christians are scattered over the larger Provinces and States of India, the Punjab and Bihar and Orissa each having over 300 thousands, Bombay, Burma and the United Provinces between 200 and 300 thousands and Bengal and Assam between 100 and 150 thousands. Divided racially Europeans (and allied races) number 176 thousands, Anglo-Indians, 113 thousands and Indians nearly 4½ millions, so that out of every 100 Christians 93 are Indians, 4 are Europeans and 3 are Anglo-Indians.

35—40	636	565	622	556
40—45	621	621	634	631
45—50	392	346	380	338
50—55	434	438	432	443
55—60	185	168	177	164
60—65	266	298	257	305
65—70	81	79	83	75
70 & over	160	180	145	175
Mean age	24·8	24·7	24·7	24·7

In the whole of British India the infant death-rate amounts to about one-fifth of the total death-rate for all ages and about one-fifth of the children die before the age of one year. The ratios of deaths vary in different provinces the birth-rate being an important factor. Thus they are specially high in the United Provinces and Central Provinces where the birth-rate is high and low in Madras which has a lower general birth-rate. The recorded rates in some of the cities are phenomenally high but may, owing to the defective reporting of births, be somewhat exaggerated.

Special causes contribute to the high mortality of infants in India. Owing to the custom of early marriage co-habitation and child-birth commonly take place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery, seriously affects the health and vitality of the mother and through her of the child. Available statistics show that over 40 per cent. of the deaths of infants occur in the first week after birth and over 60 per cent. in the first month. If the child survives the pre-natal and natal chances of congenital debility and the risks of child-birth, it is exposed to the dangers of death in the early months of life from diarrhœa or dysentery.

Delhi	233

Sex Ratio.—In the whole of India there is an excess of males over females, the figures being 945 females per thousand males. These results being opposed to experience in most other countries of the world have been challenged and attributed to errors in the Indian census. This reasoning is rejected by the Census authorities, who insist that the disparity between the sexes is due to special conditions in the Indian Empire. The sex ratio has fallen in the last twenty years throughout India. The statistics of birth suggest that the proportion of females born to males born has, if anything, declined during this period, and in any case there has been a marked decline in the last five years of the last decade in most provinces. The decline in the proportion of women however is chiefly due to (*a*) the absence of famine mortality which selects adversely to males and (*b*) the heavy mortality from plague and influenza which has selected adversely to females.

Marriage.—The subject of polygamy has been discussed fully in the report of 1911. Both Hindus and Muhammadans are allowed more wives than one, Muhammadans being nominally restricted to four. As a matter of practice polygamy is comparatively rare owing to domestic and economic reasons and has little effect on the statistics. The table shows the number of married women per 1,000 married men in India and the main provinces. No definite conclusions however can be drawn from these figures because (1) they probably contain a certain number of widows, divorces and prostitutes who have wrongly returned as married and (2) it is impossible accurately to gauge the effect of migration on the figures of the married in any area. The custom of polyandry is recognized as a regular institution among some of the tribes of the Himalayas and in parts of south India. It is also practised among many of the lower castes and aboriginal tribes. Its effect is reflected in the statistics of a few small communities such as the Buddhists of Kashmir where the proportion of married women to married men is exceptionally low, but otherwise the custom is of sociological rather than of statistical interest.

Number of married females per 1,000 *males.*

Madras	1,061
Punjab	1,021
United Provinces	1,013

Widows.—The proportion of widowers in the populations, *viz.*, 6·4 per cent., does not differ widely from the figure for European countries, but the number of widows is strikingly

large. The large number of Indian widows is due partly to the early age of marriage, partly to the disparity in the ages of the husbands and wives but chiefly to the prejudice against the remarriage of widows. The higher castes of Hindus forbid it altogether and, as the custom is held to be a mark of social respectability many of the more ambitious of the lower castes have adopted it by way of raising their social status, while Muhammadans who are closely brought into touch with their Hindu neighbours are apt to share the prejudice

Proportion of widows in the population per 1,000.

Early Marriage.—The figures clearly show an increase in the numbers of those in the early age-categories who are still unmarried. The movement is most marked in the Hindu community but is shared by the other religions, the change being less noticeable among the Buddhist and Christian communities who are not addicted to early marriage. The change is most conspicuous in the age-categories 10 to 15 for women and 10 to 20 for men.

SOCIAL AND ECONOMIC CONDITIONS.

Literacy.—The number of persons in India Literate in the sense of being able to write a letter and read the reply is 22·6 millions, amounting, if children under five years of age are excluded, to 82 in every thousand of the population. Of males 139 in every thousand at age five and above are eliterate, the corresponding proportion in the case of females being 21.

The Hindus have one literate person in every thirteen; for males the ratio is one in eight and for females one in sixty-three. The proportion of Sikh males who are literate is less than that of Hindus. One Mahomedan male in 11 and one female in 116 can read and write. The low position of Musalmans is partly due to the fact that in Bengal, the Punjab, North-West Frontier Province and Sind, where they predominate, they are mostly agricultural. Where they are in a minority, as in the Central Provinces, United Provinces and Madras, they are usually town-dwellers and have a considerably higher proportion of literates. The Hindu community embraces every stratum of society and the proportion of literacy is seriously affected by the inclusion of the vast mass of the lower rural classes. Some of the higher Hindu castes have more literate males than the Parsis whilst others are on a level with or even below the aboriginal tribes.

English.—In the whole of India 2·5 million persons or 160 males and 18 females in every ten thousand persons of each sex aged five and over can read and write English.

One in thirty males in Bengal and one in forty-three in Bombay are literate in English. In Madras, Assam and Burma the proportion is 2 per cent. while in Bihar and Orissa, the Central Provinces and the United Provinces it is below 1 per cent. Of the States Cochin and Travancore have between 3 and 4 per cent., but in others the proportions are much lower. More than half the number of Parsi males and one-fourth of their females can read and write English. Of Christians nearly all the Europeans and many of the Anglo-Indian are literate in English; but except on the southern coast English literacy is rare among the Indian Christians and the regional proportions therefore largely follow the racial distribution. Though the proportions in the other communities, taken on the total populations, are small, some of the higher castes have a fairly large number of English-knowing members. In Bengal about half of the Baidya males and a quarter of the Brahman and Kayastha males are literate in English, while in Madras more than a quarter of the Tamil Brahmans can claim this accomplishment. Of the Jain in Kathiawar nearly a tenth are literate in English though the Chaturth Jains of Kolhapur, who are cultivators, are less literate than the average of the Presidency. During the decade the number of males knowing English rose by 51 per cent. and that of females by 57 per cent. Among the main Provinces the greatest progress has been made by Bengal, Assam and Bombay and in the States by Cochin, Travancore, Mysore and Baroda.

Languages.—In the whole Indian Empire 222 languages were returned at the census, dialects, as has been previously explained, not having been separately considered. The

principal languages are given in the following statement:—

Language.	Number of speakers in (000's omitted). 1921.	1911.	Percentage of increase or decrease.
Western Hindi ..	96,714	96,041	+ 1
Bengali	49,294	48,368	+ 2
Telugu	25,601	23,543	+ 2
Marathi	18,798	19,807	— 5
Tamil	18,780	18,128	+ 4
Panjabi	16,234	15,877	+ 2
Rajasthani ..	12,681	14,068	—10
Kanarese	10,374	10,526	— 1
Oriya	10,143	10,162	—·2
Gujarati	9,552	9,238	+ 3
Burmese	8,423	7,894	+ 7
Malayalam ..	7,498	6,792	+10
Lahnda or Western Panjabi ..	5,652	4,779	+18

The necessity of a common medium of conversation and intercourse, which has given rise to bi-lingualism and the consequent displacement of tribal languages, has formed the subject of a considerable amount of discussion and suggestion during the last decade and a good deal has been written on the possibility of a *lingua franca* for India. The combined speakers of Eastern and Western Hindi considerably exceed in number the strength of any other individual language in India, and if we add to these two languages Bihari and Rajasthani, which so resemble Hindi as to be frequently returned under that name in the census schedules, we get well over 100 millions of speakers of tongues which have some considerable affinities and cover a very large area of northern and central India. In their pure forms these four languages may be scientifically distinct; but this is not the popular view. There is a common element in the main languages of northern and central India which renders their speakers, without any great conscious change in their speech mutually intelligible to one another, and this common basis already forms an approach to a *lingua franca* over a large part of India.

Infirmities.—These are classes under four main heads—insanity, deaf-mutism, blindness and leprosy. The appended statement shows the number of persons suffering from each infirmity at each of the last five censuses and the proportion per hundred thousand of the population:—

Infirmity.	NUMBER AFFLICTED WITH RATIO PER HUNDRED THOUSAND OF THE POPULATION. 1921.	1911.	1901.	1891.	1881.
Insane	88,305 28	81,006 26	66,205 23	74,279 27	81,132 35
Deaf-mutes..	189,644 60	199,891 64	153,168 52	196,861 75	197,215 86
Blind	479,637 152	443,653 142	354,104 121	458,868 167	526,748 229
Lepers	102,513 32	109,094 35	97,340 33	126,244 46	131,968 57
TOTAL ..	860,099 272	833,644 267	670,817 229	856,252 315	937,063 407

There had been a continuous decline in the total number as well as in the proportion of persons recorded as afflicted up to 1901. This fall has been ascribed, partly, to a progressive improvement in the accuracy of the diagnosis and, partly, to an actual decrease in the prevalence of the infirmities, owing to the improvement in the material condition of the people to better sanitation and (especially in the case of blindness) to the increasing number of cures effected with the aid of modern medical and surgical science. In the decade ending 1901 the relatively high mortality of the afflicted in the two severe famines must have been a considerable factor in the decline shown at that census, but the method of compilation adopted in 1901 and in the previous census was defective, and, certainly in 1901, many of the persons afflicted must have escaped notice in the course of tabulation. Compared with the year 1891, there was a slight decrease in the total number of persons recorded as afflicted in 1911, the proportion per hundred thousand persons falling from 315 to 267. The small increase in the present decade, amounting to 26,455 persons or one per 100,000 may be due to improvement in record and tabulation but is certainly unexpected.

Caste.—The enormous complexity of the caste system makes it impossible to give more than the briefest results here; the curious must be referred to the extensive literature on the subject, and to the whole chain of census reports where it is discussed in various aspects. All we can do here is to give the census figures of the main castes, with a comparison with 1911.

Variation in certain main castes.

Caste.	Persons. 1921	Persons. 1911
Ahir	9,032,861	9,481,194

There has been much discussion of recent years of the position and numbers of "The Depressed Classes"—a term which has never been accurately defined, but which may be described as the classes outside the pale of Hindu Society. Their numbers are given in the census as between 55 and 60 millions.

The main figure of Europeans and Anglo-Indians are given below :—

Province, State or Agency.	European and Allied Races in 1921.			Total European and Allied Races in 1911.	Anglo-Indians.	
	British Subjects.	Others.	Total.		1921.	1911.
India	163,918	10,139	174,057	197,639	113,012	100,420
Provinces	148,525	9,124	157,649	178,130	96,529	86,196
States and Agencies	15,393	1,015	16,408	19,509	16,483	14,224

OCCUPATIONS.

India is essentially an agricultural country and agriculture proper supports 224 millions of persons or 71 per cent. of the population of the Empire. If we add the pastoral and hunting occupations the percentage rises to 73, while a considerable proportion of the unfortunately large number of persons in the category of vague and unclassifiable occupations are probably labourers closely connected with the occupations of the land. Industries support 10 per cent. of the population, but the bulk of these are engaged in unorganised industries connected with the supply of personal and household necessities and the simple implements of work. Organized industries occupy only 1 per cent. of the people. In trade and transport, on which less than 6 per cent. and 2 per cent., respectively, depend a not inconsiderable number are connected with the disposal of the various kinds of agricultural products. The administration and protection of the country engage only 4,825,479 persons, or 1½ per cent. of the population, and the remainder are supported by domestic, miscellaneous and unproductive occupations. Though the extent to which agriculture predominates in individual provinces varies, there is no region in which it does not in some form easily take the first place.

In spite of the trade of Calcutta and the numerous industrial and mining concerns of Bengal and Bihar and Orissa the population of the eastern provinces is overwhelmingly agricultural and contains a higher percentage of persons supported by the land than any other tract of India. Of industrial workers the largest proportions in the local population are in the Punjab, the United Provinces and Bombay. Of these three provinces, however, agriculture dominates the economic life of the first two, where the industrial occupations, though they engage a substantial number of persons, are mostly of the cottage industry type. In Bombay the development of organized industry is of some economic importance, but is at present largely confined to a few of the biggest cities. In the category of unclassified occupations the majority of persons are labourers whose particular form of labour is unspecified and the rest mostly unspecified clerks.

Compared with 1911 the agriculturists have increased a little faster than the total population, though fishermen and hunters are fewer. Miners have risen in number with the recent expansion of the industry. Industries have substantially decreased and of the principal forms of industry the textile workers have dropped considerably, as also have potters and workers in wood and metal. An increase under transport by rail is countered by a drop under transport by road. Trade has increased, trade in textiles showing a slight rise and trade in food a slight drop. The number employed in public administration is practically stationary, but the army has risen while the police has fallen heavily. Law and medicine have gained at the expense of religion, and though instruction has spread letters have fallen. Rentiers are fewer and domestic servants as many. Beggars and vagrants, the raw material of crime and disease, have decreased but criminals, the finished article, have risen in numbers.

Occupation or means of Livelihood.

Occupation.	Number of persons supported.
INDIA	316,055,231

Domestic Service	4,570,151
All others	14,831,933

NOTE.—Occupation was not recorded for 2,887,249 persons.

Collieries.—Of a total of 288 thousand supported by collieries 205 thousand are actual workers. The most important coal mines lie in the provinces of Bihar and Orissa and Bengal. The Jherria coal-field in Manbhum, the importance of which is due to its accessibility and the superior quality of its coal, alone produces over fifty per cent. of the total annual output of coal in India. According to the industrial census the total population employed in the coal mines of Manbhum was 82,619, of whom 347 were managers, 1,519 belonged to the supervising and technical staff and 1,482 to the clerical staff, while 32,843 were skilled and 46,428 unskilled workers.

Textiles—Cotton.—Of the industries the textile industries are by far the most importants the number of persons occupied in industries connected with cotton being returned as 5,872,000 or just three-quarters of the whole number of those supported by textile industries.

The bulk of the organized establishments are in the western tracts, where the large cities owe a considerable portion of their prosperity to the development of the textile industries and the cotton-growing country is covered with mechanically worked gins and presses for the preliminary treatment of the raw material. Of the 2,037 establishments connected with cotton manufacture, employing in all 434,000 persons, no less than 737 establishments, with 277,000 employees or 64 per cent. of the personnel, belong to the western Presidency and its States.

Jute.—The spinning, pressing and weaving of jute support a population of 493,099, as compared with 362,369 ten years ago. There are a few mills and presses in Assam, Bihar and Orissa, and Madras, but the industry is practically confined to Bengal.

Nature of Ownership.—Of the total number of 15,606 establishments 677 are owned by Government, 3,292 by registered companies and 11,637 by private persons. The Government owned concerns are mostly railway and engineering workshops and other concerns such as brick and tile factories connected with the construction of roads and building and printing presses. The tea and rubber plantations are mostly the property of companies. Out of the 795 tea plantations in Assam 632 belong to companies. On the other hand the coffee plantations of Madras, which are much smaller concerns than the tea gardens, are mostly privately owned, only 23 out of 127 belonging to companies in Madras and 10 out of 242 in Mysore. The collieries are mostly company-owned, but of the 42 manganese mines of the Central Provinces half are owned by companies and half by private persons. Of the 392 cotton ginning mills in Bombay 333 are private owned, but of the cotton weaving mills 129 out of 345 are owned by companies. Similarly the jute presses are mostly private, while 60 out of the 62 jute mills of Bengal are company owned. Practically all the printing presses are private concerns, and so are a large number of the general workshops and such concerns like flour and rice mills and brick and tile works, which are mostly on a small scale. European companies own the majority of the tea gardens of Assam and Bengal, but as has already been seen Indian enterprise is growing in regard to the private ventures. Indigo in Bihar and Orissa, coffee in Madras and rubber in Travancore are mostly in European hands but the coffee plantations of Mysore are largely owned by Indians. Most of the large collieries of Bengal are held by European companies, but 65 out of the 73 private concerns belong to Indians. The cotton industry of Western India is almost entirely Indian; while the jute mills of Bengal are in European hands though the small presses are mostly owned by Indians. The rice and flour mills and the brick and tile factories, with the exception of a few large concerns, are in the hands of Indians.

Women as Workers.—The adult women (unskilled) number 508 per 1,000 adult men and the proportion of the children of both sexes under 14 years old is 140 per 1,000 adults. By far the majority of women labourers, *viz.*, 322 out of 540 thousand, are on the plantations, where their proportion per 100 men is as high as 94, the children being 190 per 1,000 adults. Women and children are also numerous in the textile and mining industries and in the former there are 408 adult women (unskilled) per 1,000 men and in the latter 521. Nearly 30 per cent. of the women employed in textile industries are recorded as skilled. About 61 per cent. of the total number of children employed in organized industries are boys and the girls almost equal the boys on the plantations and in the mines and form about one-fifth of the child labour in the textile industries. In the larger industries (20 persons and above) both female and child labour has dropped since 1911, the proportion of women (unskilled) being 515 now against 561 in 1911 per 1,000 men and the proportion of children per 1,000 adults 141 against 191 in 1911. The figures vary curiously in different industries and suggest that they are not altogether trustworthy. Women have increased in the plantations and textiles and declined in the mines. Children have decreased in the plantations and textiles and increased in the mines. Both women and children find considerable employment in the establishments connected with glass, pottery, cement and building and to a less extent in those of food and dress.

Occupation of Europeans.—Of the 103,405 male Europeans, 63,538 belong in some capacity to the category of Public Force, *i.e.* the Army, Navy, Air Force and Police; over 9,000 to Transport, *i.e.*, largely railway officials and about 6,000 to Public Administration; 4,600 to Mines and Industries; 5,900 to professions; 4,600 to trade, while there are about 4,200 imperfect entries, a number which together with the known deficiency in the census of Europeans generally somewhat detracts from the value of the details. The abnormal constitution of the foreign European population is exhibited by the small number of dependants *viz.*, 62,000, as against 111,000 workers, whereas the number of Anglo-Indian dependants is just about double the number of their workers. Nearly one-third of the Anglo-Indian males are employed on Transport, *i.e.*, chiefly Railway, and the remainder mostly find employment as clerks and upper subordinates.

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles: folded brims, projecting brims: long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water, he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *gosha* and their dress and persons are hidden by a veil when they appear in public: a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads. Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular object of representation in gold or silver.

Caste Marks.—Caste marks constitute a modest personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind o. yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elæocarpus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas. respectively. The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva.—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon's crescent in his matted hair, and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin, and his vehicle is a white bull. His wife Parvati and his son Ganesha sit on his thighs. An esoteric meaning is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future: the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpati.—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati.—Parvati, the female energy of Shiva, is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful, others terrible and ugly. Kali, the tutelary deity of Kalighat or Calcutta, is one of her fierce manifestations In this form she is black: a tongue smeared with blood projects from her gaping mouth: besides her weapons, she carries corpses in her hands, and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi. Gouri, to whom offerings are made in Indian homes at an annual festival, is benign. On the other hand the epidemic diseases like the plague and smallpox are caused by certain goddesses or "mothers."

Vishnu, the second member of the Hindu trinity, is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus, on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers, and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations, Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana, the abductor of his wife. Krishna is also a human figure, generally represented as playing on a flute, with which he charmed the damsels of his city, esoterically explained to mean his devotees.

Brahma is seldom worshipped: only a couple of temples dedicated to him have yet been discovered in all India.

Minor Deities—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them, though not mentioned in ancient literature, are celebrated in the works of modern saints.

The **Jains** in their temples, adore the sacred personages who founded and developed their sect, and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception, and in the opinion of Hindu theologians they are atheists. So also the **Buddhists** of Burma pay almost the same veneration to Prince Siddhartha as if he was a god, and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also atheists.

Images—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder, and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu: the swan of Brahma: the peacock of Saraswati: Hanuman, the monkey of Rama: one serpent upholds the earth, another makes Vishnu's bed: elephants support the ends of the universe, besides one such animal being Indra's vehicle: the goddess Durga or Kali rides on a tiger: one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal: to the Brahman vegetarian her milk is indispensable, and he treats her as his mother. So did the Rishi of old, who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones, on which the image of a serpent is carved, may be seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Gandaki and the Narmada, which have curious lines upon them, are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers: food in a vessel is placed before it, lamps are waved, and the worshipper goes round it, and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place: jewels are placed on the idol: and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated: the latter may shock him, for a Hindu dead body is generally carried on a few pieces of bamboo lashed together: a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent, and resembles the Christian coffin. Some Hindus, however, carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead: others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Bapu Lal, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red: gold or silver: gem, diamond, ruby, pearl, or merely a stone: small or tall, weak or strong: a lion, a snake, a parrot, or a dog: and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means white, and so does Arjuna: Krishna black Bhima terrible: Nakula a mongoose: Shunaka a dog: Shuka a parrot: Shringa a horn. Among the names prevalent at the present day Hira is a diamond: Ratna or Ratan a jewel: Sonu or Chinna gold: Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy: Vishnu is a pervader: Govinda is the cowherd Krishna: Keshava has fine hair: Rama is a delighter: Lakshmana is lucky: Narayana produced the first living being on the primeval waters: Ganesha is the Lord of Shiva's hosts: Dinakara is the luminary that makes the day: Subrahmanya is a brother of Ganesha. Sita is a furrow: Saitri a ray of light: Tara a star: Radha prosperity: Rukmini is she of golden ornaments: Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children; and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness, she gives them ugly names, such as Keru, rubbish, or Ukirda, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Manu counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviousness and inconstancy, as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday, its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday wth a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishyas, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gidumal, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names, like Bose and Ghose, Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession: in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris, Malabaris and Bilimorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Batliwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell-tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B. C. 250, can only be conjectured by their advancement in literature; and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them; or direct records of artistic work of an earlier date than B. C. 250 do not exist. The chief historic schools of architecture are as follows:—

Name.	Dates.	Locality of the best Examples.
Buddhist	..B.C.250—A.D.750.	Ellora, Ajanta, Kali, Sanchi.
Jaina ..	..A.D.1000—1300.	Ellora, Mount Abu, Palitana.
Brahminical..	A.D. 500 to the present day.	Ellora, Elephanta, Orissa, Bhuvaneswar, Dharwar.
Chalukyan	..A.D.1000—1200.	Umber, Somnathpur, Ballur.
Dravidian	..A.D.1350—1750.	Ellora, Tanjore, Madura, Tinnevelly.
Pathan	..A.D.1200—1550.	Delhi, Mandu, Jaunpore.
Indo-Saracenic	A.D.1520—1760.	Lahore, Delhi, Agra, Amber, Bijapur.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Topes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and collonades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint; a porch, and an arcaded courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without losing its own special characteristics of which the star-shaped plan of the shrine, with the five fold bands of external ornament, is the principal feature. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date exhibit a certain Turkish influence, especially in the great tomb of Mahmoud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur, and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fattehpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghauts or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline; but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement, the fine sense of decorative arrangements of line and mass; and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces, but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention; and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low; and is mainly confined to the decoration of mouldings, architraves, lintels, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory; but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour, but the only paintings, in the modern acceptation of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristic of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapt in mystery as is that of the artists who painted them; for no other paintings of similar power and character are known to exist; and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owned its origin to the introduction of Persian artists by the Moghul Emperor Akbar; and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling in technique the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art the caligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters; but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term, and, as the question has a distinct bearing upon the modern development of painting, a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same, though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained; and development has been upon the line of decorative fitness, harmony of colour, and expressive action. Their art has throughout been decorative, and when natural objects have been depicted, their treatment has been that of a flat pattern. The European painters, after the period above mentioned on the contrary, sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective; and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade; and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor; to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practice. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah-Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters, the execution of a single picture was subdivided; one craftsman painting the face, a second the drapery, and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were all imported from England; and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archæologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation; but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The **Schools of Art** then instituted throughout England were imitated in a timid and tentative manner in India: and were attached to the educational system, which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country, and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State, upon the ground that they had become schools of painting and had thus been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere; and as two of them, that at Madras and that at Lahore, have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field; for in addition to classes for modelling, painting and design it possesses a special school of architecture; a range of technical workshops, in which instruction is given in the applied arts; and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, banished from within its walls every vestige of European art; and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability; backed by intense enthusiasm for the views he held, which he advocated with admirable persistence; he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abinandranath Tagore, an artist of fine imagination and fancy, endowed with technical ability of a high order, combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded, about twenty years ago, what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models; and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput schools, and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford and the movement has had to depend for encourage-

ment mainly upon Europeans in England and India.

Bombay School of Art.—The attitude towards the development of art in modern India taken by Mr. Cecil Burns, who long guided the policy of the Bombay school, was diametrically opposite to that favoured by Mr. Havell. While yielding to no one in his admiration for the ancient art of India, and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained; with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past; that without this spirit, the conventions the ancient artists adopted are mere dead husks; and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters; that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art; and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr. Burns held that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take. Which of these two very divergent theories will produce the result both these gentlemen unite in wishing to see brought to pass, time alone will show. Certain it is that the driving force of any artistic impulse must come from within the nation, and that India, like every other country, in its art, as in other matters, must work out its own salvation.

Among the developments during Mr. Burns' administration were the founding of the Architectural School, the extension of drawing classes in the Government Schools, and the appointment of an Inspector of Drawing to inspect and report on the drawing classes in the Schools. A Pottery Department was also started and was abolished in 1926. Mr. Burns retired in 1918 and was succeeded in 1919 by the present Principal, Mr. W. E. Gladstone Solomon, A.R.B.C. The latter has studiously avoided any dogmatic theories as to the ultimate end which Indian art is destined to attain, though he has consistently pointed out the Indian's pre-eminence in the decoration of wall spaces.

The guiding principle with Mr. Solomon has been to teach the students to draw and to paint what they see; and further to encourage by all possible means their natural progress in the decorative direction towards which their inherent instinct most obviously urges them He has always maintained that theory in regard to the training of Indian Art students it is itself unproductive and can only be proven by practice; and as Mr. Solomon has now held the post of Principal for several years it is possible to gauge the results achieved by his system of training.

The Life Classes which were started at the end of 1919 have recently been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training; for even in Europe, too much of the study from Life is quite capable of negativing its own object. In India, where the decorative instinct is inherent, and where the possibilities of freehand drawing are still understood, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study, and at the same period, a Class of Indian Decorative Painting was inaugurated in the Bombay School of Art under the direction of the Governor of Bombay (Lord Lloyd). As this class specialises in **Mural Painting** it has long been popularly known as the Class of Mural Painting. This class has executed the decorations for many public and private buildings, and painted the ceiling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924. A great deal of controversy, which has been characterised by its academic rather than its practical note, has centred round these new movements in art training in India; but the Bombay School of Art has retained the patronage and support of the public and the increase in the number of its students (who now number over 600 in all sections of the School) has been continuous since it took its present line. It is significant that the widespread revival of public interest in Art in Western India has synchronised with these activities.

The School of Art has of late years enjoyed the patronage of successive Governors of Bombay and, largely due to the efforts of Sir Leslie Wilson, the Government of India inaugurated a competition of Indian Artists in 1927 for the decoration of wall spaces in the new buildings at New Delhi. It is a very promising result that five artists from Bombay and and the Bombay and Lahore Schools of Art proved successful in this first essay, and have been chosen for the work of painting certain wall spaces in the Secretariat.

Indian Architecture.

I. ANCIENT.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one, and with a few exceptions the only recognized authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work.

Fergusson's first architectural period is then the Buddhist, of which the great tope at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajunta, Nasik, Ellora and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the "Chalukyan" of South-central India, and the "Northern or Indo-Aryan style." The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of "Hindu"—however unscientific he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study:—Those at Mukteswara and Bhuvaneswar in Orissa, at Khajuraho, Bindrabun, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautful architectural examples in India. So also are the palaces of Amber, Datiya, Urcha, Dig and Udaipur.

Indo-Saracenic.

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a tabu on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the aesthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as "Classic" architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has, being Hindu, a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahometan buildings.

Foreign Influence.

There would appear to be a conflict between archæologists as to the extent of the effect on Indian art produced by foreign influence under the Mahometans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahometan buildings of India and those of North Africa and Europe, the introduction of the minaret and, above all, the historical evidences that exist of the presence in India of Europeans during Mogul times, are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauties and significances not to be seen in the Graeco-Bactrian sculptures, and point to those of Borobuder in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits af the controversy, with respect to sculpture ot any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahometan and Hindu buildings outweigh those between Indian and Western Mahometan work, especially in the light of the dis-similarities between the latter. They admit the changes produced by the advent of Islam but contend that the art, though modified, yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Fergusson is usually regarded as the leader of the former school while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Fergusson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression, though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Musjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Musjid, the Fort, the tombs of Humayon, Sufdar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jali"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Musjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

Indian Architecture.

I. ANCIENT.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Musjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Musjid, the Fort, the tombs of Humayon, Sufdar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jali"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Musjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

that of the prevailing material, the hard uncompromising Dekhan basalt. In a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarat freestone, while at Delhi and Agra the freer choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres.

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much animadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the *metier*, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can shew many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against everything official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value, both in a pecuniary sense and otherwise. It is also to be observed that the survival of a relic of the popular idea of the time before his advent, to the effect that though an architect might occasionally "design" a building it was always an engineer who built it, is still indicated by the architect in some cases deeming it advisable to style himself "architect and engineer."

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged—to be a remarkable survival—almost the only one left in the world—of "living art," but which is threatened with gradual extinction by reason of the spread of Western ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the "indigenous Indian" school of archæologists already mentioned, and to have based their ideas on their own reading of the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archæology and art, have pointed to the "death" of all the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival." The British in India, they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital has accordingly been entrusted jointly to a London and to a South African architect, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned.

But this controversy, however vital to the interests of the country's architecture, is too purely technical and academic for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention lies in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the various modern buildings of British India as well as examples of the "master builders" work in nearly every native town and bazaar. The town of Lashkar in Gwalior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious. The extent to which the "unbroken tradition from the past" exists may there be gauged by the traveller who is architect enough for the purpose.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprise those applied to articles devoted to religious ritual; military weapons and troppings, domestic accessories; and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often undiscriminating, in their employment of ornament; the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediæval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical; that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving; while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials; veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be on eminently suited to the genius of the Indian craftsman; and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious

stones by Indian jewellers may here be referred to. Sir George Birdwood states that "the Indian jeweller thinks of producing the sumptuous, imposing effect of dazzling variety of rich and brilliant colours and nothing of the purity of his gems." This is true in a general sense and "full many a gem of purest ray serene" was utterly ruined by crude cutting and piercing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut, many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, most of the ancient wood work has been destroyed by the action of the climate and the teeming insectivorous life of India; and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nasik, and other parts of Western India are notable for their picturesqueness and beauty: the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand; and the shapes are those which grow naturally from the working of the material with the simplest implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised of one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations, ornaments of gold and silver were regarded in the light of portable wealth, a practice which naturally made for massiveness. These solid ornaments are most effective and picturesque; and, despite an enormous output of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments, religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures, and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal, if not superior, in stone, wood, and metal; but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum bloom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But for beauty of surface and variety of texture no machine-made fabrics have ever equalled

the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom; and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia; but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed, only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence, were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century, they were executed by hand labour. The processes involved had not been discovered by scientific inquiry, such as is now understood by the phrase, but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine, and the application of mechanical power and scientific research to industry in Europe, mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsmen. In place of the ancient ideal of variety in design and treatment, which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman; the organised factory, the small workshop; specialisation and division of labour have taken the place of general proficiency among the artisans: the function of the designer has been separated from that of the craftsman; local markets have been extended to serve the whole world, and the skilled handicraftsman has, in a great measure, become a machine-minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions; and during the greater portion of that period India protected by the difficulties of transport, continued its immemorial practice. Fifty years ago this protective barrier was removed by the opening of the Suez Canal, and the handicrafts, men of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship, was attributed to the conservative practice of the craftsmen; to the gradual loss of foreign markets, and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period, an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes namely, to the introduction of machinery. Attention had been so concentrated upon speedy production, mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1851 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England, where the artistic industries were already highly organised and were commercially successful, and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs, new or old, and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry. In India their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living, but to revive those which were moribund, and resurrect those which were dead. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsmen has been recognised; and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. If, in addition, the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan, industrial art in India will quickly emerge from the cloud of depression, which has hung over it for a century past into the sunlight of prosperity.

Archæology.

The ancient monuments of India are as varied as they are numerous. Until a few years ago, the earliest known were the brick and stone erections of the Maurya period, a group of mounds at Lauriya Nandangarh, illustrative of the Vedic funeral customs and assignable roughly to the 7th or 8th century B.C., and some rough stone walls at the ancient city of Rajagriha of about the same period. The absence of structures of an earlier period was then supposed to be due to the fact that all previous architecture has been of wood and had completely perished. The recent excavations, however, at Mohenjo-daro, in Sind and at Harappa in the Punjab, have completely revolutionised ideas on this subject and proved that as far back as the 3rd or 4th millennia B.C. and probably much earlier still, India was in possession of a highly developed civilization with large and populous cities, well built houses, temples and public buildings of brick and many other amenities enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjo-daro and Harappa there are the remains of some 5 or 6 cities superimposed one upon the ruins of another.

The structures that have so far been exposed at Mohenjo-daro belong to the three latest cities on the site. Those of the third or earliest are the best in style; those of the first the poorest. Most of the structures are dwelling houses or shops, but there are others which appear to have been temples and one—of particularly massive proportions—is a large bath, surrounded by fenestrated galleries and halls. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery, engraved seals of stone and ivory and past copper implements and vessels, terracotta figurines and toys, shell ornaments and potteries both painted and plain.

These discoveries establish the existence in Sind and the Punjab during the 4th and 3rd millennia B.C. of a highly developed city life; and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the citizens at least equal to that found in Sumer and superior to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of wheat found at Mohenjo-daro resemble the common variety grown in the Punjab to-day. Besides bread, their food appears to have included beef, mutton, and pork, the flesh of tortoises, turtles and gharial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped Indian bull, the buffalo, a short horned bull, the sheep, pig, dog, horse and elephant. Besides gold and silver they used copper, tin, bronze and lead; they were familiar with the arts of spinning and weaving and with the cultivation of cotton had attained a high degree of proficiency in the jeweller's and potters' arts.

That they possessed a well developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well-executed animal devices and pictographic legends in an unknown script. The usual method of disposal of the dead appears to have been to cremate the body and then to bury a part of the burnt bones in large earthen jars or in small brick structures resembling the modern Hindu *samadhis*. Of the long period of more than 2,000 years that separates the pre-historic monuments referred to above from the historic period of India, little or nothing is yet known but there is every hope that this gap in our knowledge may be filled in by further excavations. From the time of the Mauryas, *i.e.*, 3rd century B.C., the history of architecture and the formative arts of India is clear and can be traced with relative precision.

Monumental Pillars.—The monuments, which have come down to us from the Maurya period, include, besides the caves to be referred to below, the wooden palisade (4th century B.C.) which surrounded the ancient city of Pataliputra (modern Patna), and of which a large section has been exposed, the rock and pillar edicts of Asoka (*Circa* 250 B.C.), the remains of a large pillared hall constructed by the same emperor at Pataliputra, a number of brick stupas and a monolithic rail which originally surmounted an Asoka *stupa* at Sarnath near Benares. Altogether twelve pillars of Asoka are known. Ten of them bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. The capital of each column, like the shaft, was monolithic, and comprised three members, *viz.*, a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhumed at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy, and originally supported a wheel symbolizing the law of piety preached by the Buddha. Several pieces of this wheel were found and are now preserved in the Archæological Museum at Sarnath. Of the post-Asokan period one pillar (B.C.) 150 stands to the north-east of Besnagar in the Gwalior State, another in front of the cave of Karli (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century A.D. All these are of stone; but there is one of iron also. It is near the Qutb Minar at Delhi, and an inscription on it speaks of its having been erected by a king called Chandra, identified with Chandragupta II. (A.D. 375-413) of the Gupta dynasty. It is wonderful "to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly

elegant example faces a Jaina temple at Mudabidri, not far from Mangalore.

Topes.—*Stupas*, known as *dagabas* in Ceylon and commonly called Topes in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jainas built *stupas*, no specimen of Jaina *stupas* is now extant. A notable structure of this kind which existed until recent times, was the Jaina *stupa* which stood on the Kankali Tila site at Muttra and yielded a large number of Jaina sculptures now deposited in the Provincial Museum at Lucknow. Of those belonging to the Buddhists, the great Tope of Sanchi in Bhopal is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circumambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character, and are carved, inside and out, with elaborate sculptures. The original *stupa*, which was of brick and not more than half the present dimensions, was apparently erected by Asoka at the same time as his lion-crowned pillar near the south gate, but as Sir John Marshall's recent explorations have conclusively shown, its outer casing of stone, the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist *stupas* that have been found are those of Sarnath, Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The tope proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of the Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Peppe in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas. If this interpretation is correct, we have here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja, Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency; Ellora and Ajanta in Nizam's Dominions, Barabar and Nagarjuni 16 miles north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, *viz.*, the Buddhists, Hindus and Jainas. The earliest caves so far discovered are those of Barabar and Nagarjuni which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Malinkhali putta Gosala. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave temples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Siva and was excavated by the Rashtrakuta king, Krishna I, (A. D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandgiri and Udayagiri; those of the mediæval type, in Indra Sabha at Ellora; and those of the latest period, at Ankai in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society.

Gandhara Monuments.—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude Erotes bearing a long garland, winged Atlantes without number, and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar, locally known as Shah-ji-ke-Dheri, which was explored in 1909, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over the bones of Buddha by the Indo-Scy-

thian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Burma and are now enshrined at Mandalay. To about the same age belong the *stupas* at Manikyala in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court, in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class the earliest examples are the Varaha temple at Deogarh, District Jhansi, another temple at Sanchi, the brick temples at Bhitargaon in the district of Cawnpore, all of which belong to the Gupta period and a later one at Tigowa in the Central Provinces. In South India we have two more examples, *viz.*, Lad Khan and Durga temples at Aihole in Bijapur, the latter of which cannot be later than the eighth century A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles, Indo-Aryan and Dravidian, whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style, the most prominent ones tend to the perpendicular, and in the Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple, and of the latter, the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Bhubaneswar in Orissa, Khajarah in Bundelkhand, Osia in Jodhpur, and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Raths, of 'Seven Pagodas,' on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather models of temples than *raths*. They are the earliest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kailasanath at Conjeeveram, and to the following century some of the temples at Aihole and Pattadkal of the Bijapur District, Bombay Presidency, and the monolithic temple of Kailasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple of Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular; and the high-storeyed spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist at Dambal, Rattihali, Tilliwalli and Hangal in Dharwar, Bombay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Hallebid, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of an ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi. The earliest dateable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshawar to Nigliva in the Nepal Tarai, from Girnar in Kathiawar to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II. of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 269 as the date of his coronation. His Rumindei pillar inscription, again, discovered in Nepal Tarai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Besnagar pillar. The pillar had been known for a long time but Sir John Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, who is described as an envoy of King Antialkidas of Taxila. Heliodoros is herein called a *Bhagavata*, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, is therein spoken of as having granted three hundred thousand kine and sixteen villages to gods and Brahmans and as having annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are 'forlorn and blind.'

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations. The mosque called *Adhai-din-ka-jhompra* at Ajmer and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamsh and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jami Masjid, Hoshang's tomb, Jahaz Mahal and Hindola Mahal as the most notable instances of the secular and

ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah, the Elakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work; and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahal, Mihtar Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Archæological Department.—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but spasmodic efforts appears to have been made by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3¾ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator. Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established the seven Archæological Circles that now obtain, placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.I.E., Director-General of Archæology, a comprehensive and systematic campaign of repair and excavation has been prosecuted, and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Pataliputra, Sanchi in the Bhopal State, Sarnath near Benares, and in the Indus Valley at Harappa in the Punjab and Mohenjo Daro in Sind. Of all these works those of most general interest are the Mohenjo Daro excavations, for here the Archæological Department have unearthed remains of pre-historic cities dating back to 3000 B.C. and further. The Finance Department of the Government of India invited the Legislative Assembly in March 1926, to allocate half a crore of rupees from a non-recurring surplus to form an endowment fund for excavation, so that there should be a regular income of two and a half lakhs of rupees for the purpose. Strong Brahmin opposition was advanced against the proposal and it fell through, but other measures have been taken to ensure that the researches in the Indus Valley shall be pursued in the best possible manner on the revenue grants available. The Secretary of State recently sanctioned the appointment of an eminent Orientalist and explorer, Mr. E. J. Mackay, to take charge of the Mohenjo Daro excavations. He arrived in India in November, 1926.

Indian Time.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways: and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below:

"In India we have already a standard time, which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h. 21m. 10s. in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h. 24m. 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by Scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes:—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements; but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India would be preferable.'

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways; and the substitution for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike; and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour: whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed, therefore, to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as **Indian Standard Time**: and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F. and S. meaning that the standard time is in advance of or behind local time respectively:—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 F., Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively; and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h. 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time, and would correspond with 97° 30′ E. longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case."

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human

error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile; but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time; in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time; but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below:—

		H.	M.			H.	M.

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s., or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs. 1,000=£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee was maintained, with insignificant fluctuations, at the proposed rate of 1s. 4d. until February 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s. instead of 1s. 4d. was adopted. This was followed by great fluctuations. (See article on Currency System).

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A **lakh** is one hundred thousand (written out as 1,00,000), and a **crore** is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £666,667 after 1899. With the rupee at 1s. 6d. a lakh is equivalent to £7,500 and a crore is equivalent to £750,000.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as 1½d., it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras and Bombay, may be thus expressed one maund=40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2·057 lb., and the maund 82·28 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England, especially at small shops, where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hogshead of wine contains 63 gallons and a hogshead of beer only 54 gallons; that a bushel of corn weighs 46 lbs. in Sunderland and 240 lbs in Cornwall; that the English stone weight represents 14 lbs. in popular estimation, but only 5 lbs., if we are weighing glass, and eight for meat, but 6 lbs. for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Goshangunge The maund

varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs. 10 oz. 11 drs., the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs. and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr. Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew:—

Mr. C. A. Silberrard (*President*).
Mr. A. Y. G. Campbell.
Mr. Rustomji Fardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says:—Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the North-West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are:—

FOR INDIA.

8 khaskhas	= 1 chawal
8 chawals	= 1 ratti
8 rattis	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA.

2 small ywes	= 1 large ywe
4 large ywes	= 1 pe
2 pes	= 1 mu
5 pes or 2½ mus	= 1 mat
1 mat	= 1 ngamu
2 ngamus	= 1 tikal
100 tikals	= 1 peiktha or viss.

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3·60 lbs. or 140 tolas.

Government Action.—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all-India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", near the commencement of this article, this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation or standardisation and stated that "if subsequently, opinion develops strongly in favour of the Imperial standardisation of weights, the Government of India will be prepared to under take such legislation, but at present they consider that any such step would be premature

The History of India in Outline.

No history of India can be proportionate, and the briefest summary must suffer from the same defect. Even a wholesale acceptance as history of mythology, tradition, and folklore will not make good, though it makes picturesque, the many gaps that exist in the early history of India: and, though the labours of modern geographers and archæologists have been amazingly fruitful, it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynastic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by-ways of history will reveal to him many alluring and mysterious fields for speculation. There are, for example, to this day castes that believe they sprang originally from the loins of a being who landed "from an impossible boat on the shores of a highly improbable sea"; and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained, and, for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3,000 years before Christ, with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu. Recent excavations by the Archæological Department in the Indus Valley at Harappa in the Punjab, but more particularly at Mohenjo Daro in Sind, carry us back even further. They have uncovered sites of cities bearing the marks and containing the relics of a high civilisation stated by the Department to be Sumerian. The excavations are proceeding under special direction and have excited the greatest interest in scientific circles throughout the world, but the general critic omits several of those remote centuries and takes 600 B.C., or thereabouts as his starting point. At that time much of the country was covered with forest, but the Aryan races, who had entered India from the north, had established in parts a form of civilization far superior to that of the aboriginal savages and to this day there survive cities, like Benares, founded by those invaders. In like manner the Dravidian invaders from an unknown land, who overran the Deccan and the Southern part of the Peninsula, crushed the aborigines, and at a much later period, were themselves subdued by the Aryans. Of these two civilizing forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in, or near, this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius, autocrat of Persia (521 to 485 B.C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the equivalent of about one million sterling. Detailed history, however, does not become possible until the invasion of Alexander in 326 B.C

Alexander the Great.

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos, on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and Akesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes, and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied, and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the rivers to the sea was nearly ready. The wonderful story of Alexander's march through Mekran and Persia to Babylon, and of the voyage of Nearchus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered: but his death at Babylon, in 323, destroyed the fruits of what has to be regarded as nothing but a brilliant raid, and within two years his successors were obliged to leave the Indian provinces, heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's generals was a young Hindu, Chandragupta, who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 600,000 troops in the field against Seleucus, to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced, and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the first paramount Sovereign of India (321 B.C.) with his capital at Pataliputra, the modern Patna and Bankipore. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes, the ambassador sent to India by Seleucus. His memorable reign ended in 297 B.C. when he was succeeded by his son Bindusara, who in his turn was succeeded by Asoka (269—231 B.C.) who recorded the events of his reign in numerous inscriptions. This king, in an unusually bloody war, added to his dominions the kingdom of Kalinga (the Northern Circars) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his "children". But he initiated measures for the propagation of his doctrine with the result that "Buddhism, which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably, if measured by the number of adherents. This is Asoka's claim to be remembered; this it is which makes his reign an epoch, not only in the history of India, but in that of the world." The wording of his edicts reveal him as a great king as well as a great missionary, and it is to be hoped that the excavations now being carried on in the ruins of his palace may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his

reign there had been signs of new forces at work on the borderland of India; where the independent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yueh-chi horde, which, in the first century A.D., also ousted the Indo-Parthian kings from Afghanistan and North-Western India.

The first of these Yueh-chi kings to annex a part of India was Kadphises II (A.D. 85—125), who had been defeated in a war with China, but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North, and made Peshawar his capital. Under him the power of the Kushan clan of the Yueh-chi reached its zenith and did not begin to decay until the end of the second century, concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, "one of the most elaborate and precious monuments of piety ever raised by man."

The Gupta Dynasty.

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta, who ruled for some fifty years from A.D. 326, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon, and, in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa-hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—in face of the onset of the White Huns from Central Asia—and by 480 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose, in A.D. 606, capable of consolidating an Empire. This was the Emperor Harsha who, from Thanasar near Ambala, conquered Northern India and extended his territory South to the Nerbudda. Imitating Asoka in many ways, this Emperor yet "felt no embarrassment in paying adoration in turn to Siva, the Sun, and Buddha at a great public ceremonial." Of his times a graphic picture has been handed down in the work of a Chinese "Master of the Law," Hiuen Tsiang by name. Harsha was the last native paramount sovereign of Northern India; on his death in 643 his throne was usurped by a Minister, whose treacherous conduct towards an embassy from China was quickly avenged, and the kingdom so laboriously established lapsed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs.

In the meantime in Southern India the Andhras had attained to great prosperity and carried on a considerable trade with Greece, Egypt and Rome; as well as with the East. Their domination ended in the fifth century A.D. and a number of new dynasties, of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved, and in many cases so little known, that to recount them briefly is impossible. Few names of note stand out from the record except those of Vikramaditya (11th century) and a few of the later Hindu rulers who made a stand against the growing power of Islam; of the rise of which an account is given below. In fact the history of mediæval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time, and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it: ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aborigines and various foreign tribes began to assert themselves so successfully that the Aryan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event—if a slow process may be called an event—of the middle ages was the transition from tribe to caste, the final disappearance of the old four-fold division of Brahmans; Kshattriyas, Vaisyas, and Sudras, and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshattriyas. Their origin is obscure but they appeared in the 8th century and spread, from their two original homes in Rajputana and Oudh, into the Punjab, Kashmir, and the Central Himalayas, assimilating a number of fighting clans and binding them together with a common code. At this time Kashmir was a small kingdom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy, the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa, another (the Chauhans) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rathors (circ 1040 A.D.) and the dynasty then founded by that branch of the Gaharwars of Benares became one of the most famous in India. Later in the same century the Chauhans were united, and by

1163 one of them could boast that he had conquered all the country from the Vindhyas to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj, the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilization that had been evolved out of chaos; and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith.

Mahomedan India.

The wave of Mahomedan invaders that eventually swept over the country first touched India, in Sind, less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his, Mahmud (967-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior, and Somnath in Kathiawar, but permanently occupying only a part of the Punjab. Enduring Mahomedan rule was not established until the end of the twelfth century, by which time, from the little territory of Ghor, there had arisen one Mahomed Ghori capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj, the Chauhan ruler of Delhi and Ajmer, made a brave stand against, and once defeated, one of the armies of this ruler, but was himself defeated in the following year. Mahomed Ghori was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din, the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many Kings who governed and fought and built beautiful buildings, stand out with distinction. One of these was Ala-ud-din (1296-1316), whose many expeditions to the south much weakened the Hindu Kings, and who proved himself to be a capable administrator. Another was Firoz Shah, of the house of Tughlaq, whose administration was in many respects admirable, but which ended, on his abdication, in confusion. In the reign of his successor, Mahmud (1398-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Taimur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodi, began to recover. His son, Ibrahim, still further extended the kingdom that had been recreated, but was defeated by Babar, King of Kabul, at Panipat, near Delhi, in 1526, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled in capital other than Delhi up to this date were of comparative unimportance, though some great men appeared among them. In Gujarat, for example, Ahmad Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier, though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the South, various kings of the Bahmani dynasty made names for themselves, especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan, a Turk, who founded (1490) the Bijapur dynasty of Adil Shahis. It was one of his successors who crushed the Vijayanagar dynasty, and built the great mosque for which Bijapur is famous.

The Mughal Empire.

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babar gained Delhi has already been told. His son, Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan, an Afghan of great capabilities, whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun having snatched Kabul from one of his brothers, was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar, was only 13 years old and was confronted by many rivals. Nor was Akbar well served, but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority, and he subsequently entered the Deccan and captured Ahmednagar. This great ruler, who was as remarkable for his religious tolerance as for his military prowess, died in 1605, leaving behind him a record that has been surpassed by few. His son, Jehangir, who married the Persian lady Nur Jahan, ruled until 1627, bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra, part of the palace of Agra, and the palace and fortress of Lahore His son, Shahjahan, was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1658. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty-five years' struggle against the Marathas of the Deccan who, under the leadership of Sivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb all the more anxious to establish his Empire on a firm basis in the south, but he was unable to hold his many conquests, and on his death (1707) the

Empire, for which his three sons were fighting, could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors, and in 1739 a fresh danger appeared in the person of Nadir Shah, the Persian conqueror, who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Mughal Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 19th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements.

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized, for from 1500 onwards, constant expeditions were sent to India and the first two Viceroys in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa, taken in 1510, became the capital of Portuguese India and remains to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India, as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque, da Cunha, da Castro in the former class, St. Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for, and the constant drain of men and money from Portugal, necessitated by the attacks made on their possessions in India and Malaya, was found almost intolerable. The junction of Portugal with Spain, which lasted from 1580 to 1640, also tended to the downfall of the Eastern Empire and when Portugal became independent again, it was unequal to the task of competing in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese, but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilisation and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1496 when Cabot tried to find the North-West passage, and these attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch position had been overcome, notably in the sea fight off Swally (Suvali) in 1612. The first factory, at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others, including Fort St. George, Madras, (1640) and Hughli (1651). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dower of Catherine of Braganza stands out as a land-mark; it also illustrates the weakness of the Portuguese at that date, since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1654, had already obtained from the Portuguese an acknowledgment of England's right to trade in the East; and that right was now threatened, not by the Portuguese, but by Sivaji and by the general disorder prevalent in India. Accordingly, in 1686, the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power, and create and secure such a large revenue......as may be the foundation of a large, well-grounded, sure English dominion in India for all time to come. Not much came of this announcement for some time, and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a humiliating peace had been concluded with that Emperor, and, owing to the difficulties in which the Company found itself in England, there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708, and for some years peaceful development followed; though Bombay was always exposed by sea to attacks from the pirates, who had many strongholds within easy reach of that port, and on land to attacks from the Marathas. The latter danger was felt also in Calcutta. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England, and rebellions like that led by Keigwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate; the long list of its servants, from Oxenden and Aungier to Hastings and Raffles, contains many names of men who proved themselves good rulers and far-sighted statesmen, the finest Empire-builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden, and Russia. By the French, who founded Pondicherry and Chandernagore towards the end of the 17th century, much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars.

When war broke out between England and France in 1744, the French had acquired a

strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Dupleix, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron, under La Bourdonnais (1746) Dupleix wished to hand it over to the Nawab of Arcot—a deputy of the Nizam's who ruled in the Carnatic. The French, however, kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops, and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Dupleix supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Dupleix's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power, and in return the Northern Circars, between Orissa and Madras, was granted to the French. This territory, however, was captured by the English in the seven years' war (1756-63). Dupleix had by then been recalled to France. Lally, who had been sent to drive the English out of India, captured Fort St. David and invested Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in Southern India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey.

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal, where Siraj-ud-Daula had acceded to power. The headquarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refugee and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river, the rest surrendered and were cast into the jail known as the "Black Hole." From this small and stifling room 23 persons, out of 146, came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, recaptured the town (1757), and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive, putting forward Mir Jafar as candidate for the Nawab's throne, marched out with an army consisting of 900 Europeans, 2,000 sepoys and 8 pieces of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive, after hesitating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne at Murshidabad, and the price of this honour was put at £2,340,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty-four Parganas. In the year after Plassey, Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar, in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Monghyr, organized an army, and began to intrigue with the Nawab Wazir of Oudh. He soon found, in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 200 Englishmen and a number of sepoys were massacred, but his trained regiments were defeated at Gheria and Oodeynullah, and Mir Kasim sought protection from the Nawab of Oudh. But in 1764, after quelling a sepoy mutiny in his own camp by blowing 24 ring leaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor, and the Nawab of Oudh in the battle of Buxar. In 1765 Clive (now Baron Clive of Plassey) returned as Governor. "Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive, as our military supremacy dates from his victory at Plassey." Before Clive left India, in 1767, he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render "great and meritorious services to his country."

Warren Hastings.

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor, in 1772, to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India, and, in spite of the factious attitude of Philip Francis, with whom he fought a duel and of other members of his Council, he reorganized the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company; and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal, and from 1774 to 1775

he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the forced contributions he enacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nuncomar for forgery, the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasion by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona, and the Bengal troops that he sent over made amends, by the conquest of Gujrat and the capture of Gwalior, for the disgrace of Wadgaon where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with those two potentates. The Nizam he won over by diplomacy, but against Hyder Ali he had to despatch a Bengal army under Sir Eyre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in these acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man, cautious, but swift in action when required. He was succeeded, after an interregnum, by Lord Cornwallis (1786-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal Judicature at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the "writers" and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal. (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth), an experienced Civil Servant, succeeded Lord Cornwallis, and, in 1798, was followed by Lord Wellesley, the friend of Pitt, whose projects were to change the map of India

Lord Wellesley's Policy.

The French in general, and "the Corsican" in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he formed the scheme of definitively ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by obtaining from the Nawab of Oudh the cession of large tracts of territory in lieu of payment; overdue as subsidies for British troops, he then won over the Nizam to the British side, and, after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore, the Carnatic, and Tanjore roughly constituting the Madras Presidency of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona, the Gaekwar of Baroda, Sindhia of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar, fled to British territory and signed the Treaty of Bassein which led to the third Maratha war (1802-04) as it was regarded by Sindhia and the Raja of Nagpur at a betrayal of Maratha independence. In this the most successful of British campaigns in India, Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carries all before them, the one by his victories of Assaye and Argaum and the other at Aligad, and Laswari. Later operations, such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient, sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India; and Sir George Barlow carried on the government (1805-7) until the arrival of a stronger ruler, Lord Minto. He managed to keep the peace in India for six years, and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure, inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh, at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Moira; who found himself obliged almost at once to declare war on the Gurkhas of Nepal, who had been encroaching on British territory. After initial reverses, the English, under General Ochterlony, were successful and the Treaty of Sagauli (1816) was drawn up which defines British relations with Nepal to the present day. For this success Lord Moira was made Marquis of Hastings. In the same year he made preparations for the last Maratha war (1817-18) which was made necessary by the lawless conduct of the Pindaris, gangs of Pathan or Rohilla origin, whose chief patrons were the rulers of Native States. The large number of 120,000 that he collected for this purpose destroyed the Pindaris, annexed the dominions of the rebellious Peshwa of Poona, protected the Rajput States, made Sindhia enter upon a new treaty, and compelled Holkar to give up part of his territory. Thus Lord Hastings established the British power more firmly than ever, and when he resigned, in 1823, all the Native States outside the Punjab had become parts of the political system and British interests were permanently secured from the Persian Gulf to Singapore. Lord Amherst followed Lord Hastings, and his five years' rule (1823-28) are memorable for the first Burmese war and the capture of Bharatpur. The former opera-

tion was undertaken owing to the insolent demands and raids of the Burmese, and resulted in the Burmese ceding Assam, Aracan, and the coast of Martaban and their claims to the lower provinces. The capture of Bharatpur by Lord Combermere (1826) wiped out the repulse which General Lake had received there twenty years earlier. A disputed succession on this occasion led to the British intervention.

Social Reform.

A former Governor of Madras, Lord William Bentinck, was the next Governor-General. His epitaph by Macaulay, says: "He abolished cruel rites; he effaced humiliating distinctions; he gave liberty to the expression of public opinion; his constant study was to elevate the intellectual and moral character of the nations committed to his charge."

Some of his financial reforms, forced on him from England, and his widening of the gates by which educated Indians could enter the service of the Company, were most unpopular at the time, but were eclipsed by the acts he took for the abolition of *Sati*, or widow-burning, and the suppression—with the help of Captain Sleeman—of the professional hereditary assassins known as *Thags*. In 1832 he annexed Cachar, and, two years later, Coorg. The incompetence of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1881. His rule was marked in other ways by the despatch of the first steamship that made the passage from Bombay to Suez, and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the vernaculars. Lord William Bentinck left India (1835) with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasized their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration, as well as the legislation of the country, was placed in the hands of the Governor-General in Council, and authority was given to create a Presidency of Agra. Before his retirement Bentinck assumed the statutory title of Governor-General of India (1834), thus marking the progress of consolidation since Warren Hastings in 1774 became the first Governor-General of Fort William. Sir Charles Metcalfe, being senior member of Council, succeeded Lord William Bentinck, and during his short tenure of office carried into execution his predecessor's measures for giving entire liberty to the press.

Afghan Wars.

With the appointment of Lord Auckland as Governor-General (1836-42) there began a new era of war and conquest. Before leaving London he announced that he looked with exultation to the prospect of "promoting education and knowledge, and of extending the blessings of good Government and happiness to millions in India;" but his administration was almost exclusively comprised in a fatal expedition to Afghanistan, which dragged in its train the annexation of Sind, the Sikh wars, and the inclusion of Baluchistan in the protectorate of India. The first Afghan war was undertaken partly to counter the Russian advance in Central Asia and partly to place on the throne at Kabul the dethroned ruler Shah Shuja in place of Dost Mahomed. The latter object was easily attained (1839) and for two years Afghanistan remained in the military occupation of the British. In 1841 Sir Alexander Burnes was assassinated in Kabul and Sir William Macnaghten suffered the same fate in an interview with the son of Dost Mahomed. The British Commander in Kabul, Gen. Elphinstone, was old and feeble, and after two months' delay he led his army of 4,500 and 12,000 camp followers back towards India in the depth of winter. Between Kabul and Jallalabad the whole force perished, either at the hands of the Afghans or from cold, and Dr. Brydon was the only survivor who reached the latter city. Lord Ellenborough succeeded Lord Auckland and was persuaded to send an army of retribution to relieve Jallalabad. One force under Gen. Pollock relieved Jallalabad and marched on Kabul, while Gen. Nott, advancing from Kandahar, captured Ghazni and joined Pollock at Kabul (1842). The bazaar at Kabul was blown up, the prisoners rescued, and the army returned to India leaving Dost Mahomed to take undisputed possession of his throne. The drama ended with a bombastic proclamation from Lord Ellenborough and the parade through the Punjab of the (spurious) gates of Somnath taken from the tomb of Mahmud of Ghazni.

Sikh Wars.

Lord Ellenborough's other wars—the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall, and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable, for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom, had died in 1839, loyal to the end to the treaty he had made with Metcalfe thirty years earlier. He left no son capable of ruling, and the *khalsa*, or central council of the Sikh army, was burning to measure its strength with the British sepoys. The intrigues of two men, Lal Singh and Fej Singh, to obtain the supreme power led to their crossing the Sutlej and invading British territory. Sir Hugh Gough, the Commander-in-Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mudki, Ferozeshah, Aliwal and Sobraon. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Dhuleep Singh was recognized as Rajah; Major Henry Lawrence was appointed Resident, to assist the Sikh Council of Regency, at Lahore; the Jullundur Doab was added to British territory; the Sikh army was limited; and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian proconsuls.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillanwala the British lost 2,400 officers and men.

besides four guns and the colours of three regiments: but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief, Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army. As a consequence the Punjab was annexed and became a British province (1849), its pacification being so well carried out, under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war, this time in Burma, owing to the ill-treatment of British merchants in Rangoon. The lower valley of the Irawaddy was occupied from Rangoon to Prome and annexed, under the name of Pegu, to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His "doctrine of lapse" by which British rule was substituted for Indian in States where continued misrule on the failure of a dynasty made this change possible, came into practice in the cases of Satara, Jhansi, and Nagpur (which last-named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system, and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor-General, and summoned representatives of the local Governments to the deliberations of the Government of India. Finally, in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny, which so swiftly followed his resignation, was by many critics in England attributed to his passion for change.

The Sepoy Mutiny.

Dalhousie was succeeded by Lord Canning in 1856, and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate, but are probably to be found in the unrest which followed the progress of English civilisation; in the spreading of false rumours that the whole of India was to be subdued; in the confidence the sepoy troops had acquired in themselves under British leadership; and in the ambition of the educated classes to take a greater share in the government of the country. Added to this, there was in the deposed King of Delhi, Bahadur Shah, a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work, and the British troops reduced, in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10 the sepoys at Meerut rose in mutiny, cut down a few Europeans, and, unchecked by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North-Western Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates, who armed the Sikhs, and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India, the contingents of some of the great chiefs joined the rebels, but Hyderabad was kept loyal by the influence of its minister, Sir Salar Jung.

The interest of the war centres round Delhi, Cawnpore and Lucknow, though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July, and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers attacks were frequent and the losses heavy: cholera and sunstroke carried off many victims. on the Ridge: and when the final assault was made in September the Delhi army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8, and by the 13th a breach was made On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate, blown in by Home and Salkeld, Col. Campbell led his men and Nicholson formed up his troops within the walls. By nightfall the British, with a loss of nearly 1,200 killed and wounded, had only secured a foothold in the city. Six days' street fighting followed and Delhi was won; but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hudson.

Massacre at Cawnpore.

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib, the heir of the last Peshwa, a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, surrendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them, the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock, having defeated the Nana's forces, arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invested, and the garrison was

not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced, and in Central India, where Sir Hugh Rose waged a brilliant campaign against the disinherited Rani of Jhansi—who died at the head of her troops—and Tantia Topi.

Transfer to the Crown.

With the end of the mutiny there began a new era in India, strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24,000 officers and men were—greatly resenting the transfer—amalgamated with the Royal service, and the Indian Navy was abolished. On November 1, 1858, the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the Government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced, and all of every race or creed, were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India—"In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward." Peace was proclaimed in July 1859, and in the cold weather Lord Canning went on tour in the northern provinces, to receive the homage of loyal chiefs and to assure them that the "policy of lapse" was at an end. A number of other important reforms marked the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor-General's Council, and the Councils of Madras and Bombay by adding non-official members, European and Indian, for legislative purposes only. By another Act of the same year, High Courts of Judicature were constituted. To deal with the increased debt of India Mr. James Wilson was sent from England to be Financial Member of Council, and to him are due the customs system, income tax, license duty, and State paper currency. The cares of office had broken down the Viceroy's health. His successor, Lord Elgin, lived only a few months after his arrival in India, and was succeeded by Sir John (afterwards Lord) Lawrence, the "saviour of the Punjab."

Sir John Lawrence.

The chief task that fell to Sir John Lawrence was that of reorganising the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three: the artillery was to be almost wholly European. The re-organisation was carried out in spite of financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern; but operations in Bhutan were all the drain made on the army in India while the re-organising process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy, and he laid down the principle for the first time in Indian history, that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col. (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The "Share Mania," however, did no permanent harm to the trade of Bombay, but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service, from an Assistant Magistracy to the Viceroyalty. Lord Mayo, who succeeded him, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties, thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him, for he was murdered in the convict settlement of the Andaman Islands, in 1872 Lord Northbrook (Viceroy 1872-6) had to exercise his abilities chiefly in the province of finance. A severe famine which threatened Lower Bengal in 1874 was successfully warded off by the organization of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda for mis-government, and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch, and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj, and further encouragement was given to the growth of this spirit when, in a durbar of great magnificence held on January 1st, 1877, on the famous Ridge at Delhi, Queen Victoria was proclaimed Empress of India. The Viceroy of that time, Lord Lytton, had, however, to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78, the worst famine India had known. The most strenuous exertions were made to mitigate its effects, and eight crores of rupees were spent in importing grain; but the loss of life was estimated at 5¼ millions. At this time also Afghan affairs once more became prominent.

Second Afghan War.

The Amir, Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Bolan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari, who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasia. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Sirdar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Maiwand, and invested Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman, but the latter was left undisputed Amir of Afghanistan until his death in 1901.

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commission with a view to the spread of popular instruction on a broader basis, and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin, who succeeded Lord Ripon in 1884, had to give his attention more to external than internal affairs: one of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1885 a third Burmese war became necessary owing to the truculent attitude of King Thibaw and his intrigues with foreign Powers. The expedition, under General Prendergast, occupied Mandalay without difficulty and King Thibaw was exiled to Ratnagiri, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January, 1886.

The Russian Menace.

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred between Russian and Afghan troops at Penjdeh; during the delimitation of the Afghan frontier towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain. War was averted, but the Penjdeh incident had called attention to a menace that was to be felt for nearly a generation more; it had also served to elicit from the Princes of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service Troops was organised. Under Lord Lansdowne's rule also the defences of the North-Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts, who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North-Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinton the Chief Commissioner of Assam. Mr. Quinton, the commander of his escort, and others, were treacherously murdered in a conference and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganised under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events, such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them: legislation aimed at social and domestic reform among the Hindus: and the closing of the Indian Mints to the free coinage of silver (1893).

Frontier Campaigns.

Lord Elgin, who succeeded Lord Lansdowne in 1894, was confronted at the outset with a deficit of Rs. 2¼ crores, due to the fall in exchange. (In 1895 the rupee fell as low as 1*s.* 1*d.*) To meet this the old five per cent. import duties were reimposed on a number of commodities, but not on cotton goods: and within the year the duty was extended to piece-goods, but not to yarn. The reorganisation of the Army, which involved the abolition of the old system of Presidency Armies, had hardly been carried out when a number of risings occurred along the North-West Frontier. In 1895 the British Agent in Chitral—which had come under British influence two years previously when Sir H. M. Durand had demarcated the southern and eastern boundaries of Afghanistan—was besieged and had to be rescued by an expeditionary force. Two years later the Wazirs, Swatis, and Mohmands attacked the British positions in Malakand, and the Afridis closed the Khyber Pass. Peace was only established after a prolonged campaign (the Tirah campaign) in which 40,000 troops were employed, and over 1,000 officers and men had been lost. This was in itself a heavy burden on the finances of India, which was increased by the serious and widespared

famine of 1896-97 and by the appearance in India of bubonic plague. The methods taken to prevent the spread of that disease led, in Bombay, to rioting, and elsewhere to the appearance in the vernacular press of seditious articles which made it necessary to make more stringent the law dealing with such writings.

Lord Curzon's Viceroyalty.

With famine and plague Lord Curzon also, who succeeded Lord Elgin in 1899, had to deal. In 1901 the cycle of bad harvests came to an end; but plague increased, and in 1904 deaths from it were returned at over one million. Of the many problems to which Lord Curzon directed his attention, only a few can be mentioned here: some indeed claim that his greatest work in India was not to be found in any one department but was in fact the general gearing up of the administration which he achieved by his unceasing energy and personal example of strenuous work. He had at once to turn his attention to the North-West Frontier. The British garrisons beyond our boundary were gradually withdrawn and replaced by tribal levies, and British forces were concentrated in British territory behind them as a support. An attempt was made to check the arms traffic and work on strategic railways was pushed forward. The fact that in seven years he only spent a quarter of a million upon repressive measures and only found it necessary to institute one blockade (against the Mahsud Waziris) is the justification of this policy of compromise between the Lawrence and Forward schools of thought. In 1901 the trans-Indus districts of the Punjab were separated from that Province, and together with the political charges of the Malakand, the Khyber, Kurram, Tochi, and Wana were formed into the new North-West Frontier Province, under a Chief Commissioner directly responsible to the Government of India. That year also witnessed the death of Abdur Rahman, the Amir of Afghanistan, and the establishment of an understanding with his successor Habibullah. In 1904 the attitude of the Dalai Lama of Tibet being pro-Russian and anti-British, it became necessary to send an expedition to Lhasa under Colonel (Sir Francis) Younghusband. The Dalai Lama abdicated and a treaty was concluded with his successor.

In his first year of office Lord Curzon passed the Act which, in accordance with the recommendations of the Fowler Commission, practically fixed the value of the rupee at 1*s*. 4*d*., and in 1900 a Gold Reserve fund was created. The educational reforms that marked this Viceroyalty are dealt with elsewhere: chief among them was the Act of 1904 reorganising the governing bodies of Indian Universities. Under the head of agrarian reform must be mentioned the Punjab Land Alienation Act, designed to free the cultivators of the soil from the clutches of money-lenders, and the institution of Agricultural banks. The efficiency of the Army was increased (Lord Kitchener was Commander-in-Chief) by the re-armament of the Indian Army, the strengthening of the artillery, and the reorganisation of the transport service. In his relations with the Feudatory Chiefs, Lord Curzon emphasized their position as partners in administration, and he founded the Imperial Cadet Corps to give a military education to the sons of ruling and aristocratic families. In 1902 the British Government obtained from the Nizam a perpetual lease of the Assigned Districts of Berar in return for an annual payment of 25 lakhs. The accession of King Edward VII was proclaimed in a splendid Durbar on January 1, 1903. In 1904 Lord Curzon returned to England for a few months but was re-appointed to a second term of office, Lord Ampthill, Governor of Madras, having acted as Viceroy during his absence. The chief act of this second term was the partition of Bengal and the creation of a new Province of Eastern Bengal and Assam—a reform, designed to remove the systematic neglect of the trans-Gangetic areas of Bengal, which evoked bitter and prolonged criticism. In 1905 Lord Curzon resigned, being unable to accept the proposals of Lord Kitchener for the re-adjustment of relations between the Army headquarters and the Military Department of the Government, and being unable to obtain the support of the Home Government. Lord Curzon was succeeded by **Lord Minto,** the grandson of a former Governor-General. It was a stormy heritage to which Lord Minto succeeded, for the unrest which had long been noticed developed in one direction into open sedition.

Outside Bengal attempts to quell the disaffection by the ordinary law were fairly successful. But scarcely any province was free from disorder of some kind and, though recourse was had to the deportation of persons without reason assigned under an Act of 1818, special Acts had to be passed to meet the situation, *viz*:—an Explosives Act, a Prevention of Seditious Meetings Act, and a Criminal Law Amendment Act which provides for a magisterial inquiry in private and a trial before three judges of the High Court without a jury. Concurrently with these legislative measures steps were taken to extend representative institutions. In 1907 a Hindu and a Mahomedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of discussion. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy, Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb the friendly relations of the two countries in Asia generally, and in Persia, Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North-West frontier, against the Zakka Khels and the Mohmands; and ships of the East Indies Squadron were frequently engaged off Maskat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mekran to the frontier of India.

Visit of the King and Queen.

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the

King Emperor and the Queen, who arrived at Bombay on December 2, 1911. From there they proceeded to Delhi where, in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons, including an annual grant of 50 lakhs for popular education, were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi: the reunion of the two Bengals under a Governor-in-Council: the formation of a new Lieutenant-Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913, the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot, 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions, and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans.

Still more serious trouble occurred in September, 1914, when a riot at Budge-Budge among a number of Sikh emigrants returned from Canada gave a foretaste of the revolutionary plans entertained by those men. The sequel, revealed in two conspiracy trials at Lahore, showed that the "Ghadr" conspiracy was widespread and had been consistently encouraged by Germany.

Lord Chelmsford as Viceroy.

In 1916 Lord Chimsford succeeded Lord Hardinge, as Viceroy. The part played by India in the war was developed in every possible way. Not only was the Indian Army increased but the resources of the country were developed with the help of the Munitions Board and India assumed responsibility for 100 millions of the war debt. The share of India in the Imperial burden of the war was emphasised in another and very significant way by her representation in the Imperial War Cabinet in London by His Highness the Maharaja of Bikaner and Sir S. P. (Lord) Sinha. On the Frontier, where there had been numerous though comparatively slight disturbances in 1914-15, a punitive expedition had to be undertaken against the Mahsuds.

In 1917 **Mr. Montagu**, who had succeeded Mr. Chamberlain as Secretary of State, carried out the latter's intention of visiting India. The result of the visit was shown in the following year when a report was issued containing what is known as the joint scheme of reform evolved by the Secretary of State and the Viceroy. Shortly after this report there was issued a report by the Special Committee of Inquiry over which Mr. Justice Rowlatt presided, into seditious crime in India. That report and the legislation which followed in consequence of it, together with the announcement of the proposed reform scheme, led to a renewal of political discussion and agitation which had to a great extent been in abeyance during the early years of the war.

Early in 1919 prolonged strikes in Bombay and elsewhere showed that India, though comparatively little affected by the economic results of the war, was confronted by industrial and economic problems which were none the less grave. The gravity of those problems was increased by the ravages of influenza which is supposed to have caused 6,000,000 deaths during the winter months of 1917-18. Disturbances broke out in April as a sequel to the passive resistance movement against the Rowlatt Act (the Satyagraha Movement) which produced a situation to which there has been no parallel since the Mutiny. It is sufficient here to state that in Ahmedabad, Viramgam, Delhi, Lahore, Amritsar, Gujranwalla and other places the crowd, by attacking life and property and by train wrecking and tearing up railway lines and telegraph wires, provoked a situation which could only be met by the proclamation of martial law and the enforcement of military measures for the protection of law abiding subjects and for the suppression of disorder.

Exaggerated reports of those riots and of the effect of the Rowlatt Act may be presumed to have had some influence on the Amir of Afghanistan when he declared war and invaded British territory. Amir Habibullah Khan, who had been loyal to his treaty obligations throughout the war, was murdered in February and, after a brief occupation of the throne by his brother Nasrulla Khan, his son Amanulla had been declared Amir. A sequel to this war was the renewal of trouble along a great part of the North Western frontier where the tribesmen, who had at first appeared to be impressed by the British successes, took the offensive against our advance posts especially in southern Waziristan. The operations which necessarily followed and the severity of the fighting were on a scale never previously reached in frontier war, and made the campaign of unusual length

The Government of India Bill, embodying Mr. Montagu's proposals for the popularisation of the system of Government, was passed in December.

The next year, 1920, more than any which preceded it, was distinguished by political agitation. The cause of this was in part the indignation created by the facts disclosed in the report of the Hunter Commission on the outbreaks of 1919 in the Punjab and elsewhere, and the stimulus given to the Khilafat agitation by the terms of the Peace treaty with Turkey.

Lord Reading's Viceroyalty.

The fruits of agitation were reaped in plenty in 1921, the first year of Lord Reading's term of office. Murderous outbreaks at Malegaon, Dharwar and elsewhere were followed by a rebellion of the Moplahs in Malabar which assumed the most serious proportions and necessitated prolonged military operations.

It had been arranged that H. R. H. the Prince of Wales should visit India at the end of 1920 and should open the new Councils in 1921, but, for reasons of health, that visit had to be postponed; and H. R. H. the Duke of Connaught came to India early in 1921 in order to open the new Councils. The Prince's visit took place in 1921-22 and was essentially non-political.

The enthusiasm with which the Prince was greeted during his tour was very marked. But simultaneously with the loyal display riots broke out in more than one of the cities which he visited. But after the imprisonment of some of the leading agitators in the early part of 1922 the country enjoyed comparative quiet, except in the Punjab where the Akali movement among the Sikhs, which had started as a puritan religious movement, developed into a political movement attended by constant and widespread disorder. The enhanced position of India in the Empire and the position of India as a nation entering actively into the work of the League of Nations, were emphasised during the year by the tour of the Dominions undertaken by the Hon. S. Sastri.

The Salt Tax.

Early in 1923 a great deal of criticism was excited by Lord Reading's certification of the doubling of the salt tax, under the powers conferred by the Reformed constitution, in opposition to the clearly expressed will of the Legislative Assembly. Objection was taken to this step, not so much because an increase in the Salt Tax had always been looked upon as a measure to which resort should be made only in grave emergencies, as because the financial powers of the elected chambers, much emphasised in the Montagu-Chelmsford Report, were thus shown to be capable of restriction.

Break up of non-co-operation.

Two causes combined during the year to weaken the position of the extremists. The first was the split in the Congress, the second the rise of communal feeling between Hindus and Mahomedans. The Congress split was brought about by Mr. C. R. Das, who, realising no doubt that Mr. Gandhi had failed and it was unlikely that any other man would have greater success by a rigid adherence to his methods, declared in favour of standing for the Councils.

The other cause was the disappearance of the surface unity between Hindus and Mahomedans which Mr. Gandhi, helped by strong feeling among Mahomedans on the Turkish question, had temporarily contrived. The split was followed by the formation of two pan-Hindu movements: the Shuddhi movement, announced by Swami Shraddhanand, which aimed at the re-conversion to Hinduism of the Malkhana Rajputs and other low class occupants of the fringe of Islam, and the Sangathan movement of which Pandit Malaviya was the sponsor, and which aimed at teaching Hindus physical exercises and sword play, so that they might be the better able to protect themselves. These two movements greatly irritated the Mahomedans, and during the year there were between fifteen and twenty serious Hindu-Mahomedan riots, occurring in all parts of India.

Violent Movements.

In the Punjab the Akali movement showed an increasing tendency to forget the teachings of Mr. Gandhi. The Babar Akalis murdered several of their co-religionists whose political views they did not approve, and the Akali Dal became a more definitely military organisation, acting directly under the orders of the Shrines Committee. After a career of misgovernment and intrigue against the neighbouring state of Patiala, the Maharaja of Nabha voluntarily abdicated. Somewhat ludicrously the Akalis turned him into a martyr, and the movement became sufficiently formidable for both the Akali Dal and the Shrines Committee to be declared illegal associations. Many arrests were made; but, owing to the lack of unity in the extremist camp, an attempt of the Congress to secure all India support for the Akalis had a meagre result.

During the year there were an unusual number of frontier outrages. Several officers were shot, and worldwide attention was attracted by the kidnapping of Molly Ellis, after the murder of her mother, and by her heroic rescue by Mrs. Starr. Coupled with the slow rate of progress of the operations in Waziristan, these continued incidents provoked some comment.

Mr. Gandhi's Release.

Mr. Gandhi's premature release from Yerowda jail in consequence of an operation for appendicitis temporarily revived the drooping hopes of the extremists, but any idea that he would organize another huge anti-Government movement was rapidly shattered. The breach between him and Mr. Das steadily widened and the belief of Hindu politicians in Mr. Gandhi's common sense diminished though their esteem for his character remained as high as ever. Moreover the feeling between Hindus and Mahomedans which had suddenly appeared the previous year darkened the whole face of the country. With the abolition of the Khilafat by Mustapha Kemal in March the *raison d'etre* of the famous pact between Mr. Gandhi and the Alis was destroyed and animosity no longer felt the restraint of political expediency. Rumours were frequent that some mysterious All-India Mahomedan clique was planning aggressive action against Hindus; and excitement was brought to fever heat by the riots in the Frontier Province, the Punjab, the United Provinces, Delhi, Calcutta, the Central Provinces and Hyderabad which broke out during the autumn season of religious festivals. In September Mr. Gandhi decided on a 21 days' fast, which he successfully accomplished, partly as an expiation for his share in the bad feeling, and partly to draw the attention of the country to the urgency of the problem. Simultaneously a conference of representatives of all communities, including the Metropolitan and other English visitors was called at Delhi to decide what steps could be taken to bring about a better state of affairs. The conference passed some excellent resolutions, but on the very day when Mr. Gandhi's fast ended riots again broke out, and what gave the matter a grave aspect was that the date of the riots had been predicted and it was commonly said that they had been carefully planned for that very day.

Reforms Imperilled.

The year saw the final collapse of non-co-operation. Though Mr. Gandhi and a dwindling band of followers clung to *khaddar* and the triple boycott, lawyers returned to their practices, schoolboys and students finally despaired of national education, and the best

brains of non-co-operation followed Mr. Das into the Councils. The programme announced by Mr. Das was to wreck the Reforms, and in this ambition he was reasonably near success. Obstructive tactics effected the resignation of the Ministers in the Central Provinces and Bengal and left these two provinces to be administered by Governors without democratic help, but in other parts of India the Councils did well in the circumstances.

Underground the revolutionary movement continued. A series of assassinations took place in Bengal, and Mr. Das incurred bitter criticism by associating himself with a tribute to the murderer of an inoffensive Englishman in Calcutta.

The third attempt to climb Everest came very near to success. A height 600 feet from the top was reached, but in an effort to accomplish the last stretch Mallory and Irvine were killed. It was not established whether they had or had not reached the top.

India in 1925 and 1926.

In 1925 the extremists received a sad blow by the death of Mr. C. R. Das, leader of the Swarajist Party. His death took the Party completely aback, and the counsel of Mr. Gandhi had to be sought in order to deal with this disastrous situation. Mr. Gandhi sent an invitation to Arabindo Ghose, a Bengali *litterateur* and reputed thaumaturge who since the assassinations of 1908 and 1909 has been living on French territory at Pondicherry, to take command of the Swarajist band. Mr. Ghose declined with thanks, and the lot thereupon fell upon Mr. Sen Gupta, a Bengali politician of whom for the rest of the year little was heard outside Bengal. From this point the falling away of Swarajists from the old austere principle of ruthless and irreconcilable obstruction proceeded apace. First Mr. Tambe, a Swarajist in the Central Provinces, accepted an Executive Councillorship from the alien Government, next Mr. Patel, a Bombay Swarajist, took the Presidential chair in the Assembly and expressed his readiness if necessary to meet the Viceroy nine times a day, and then others in Bombay and the Central Provinces adopted the policy of "responsive co-operation"—a phrase denoting a critical attitude towards Government coupled with readiness in certain circumstances to receive a lucrative post from Government. The political sky, in fact, brightened considerably.

Indian political history during 1926, the year in which Lord Irwin became Viceroy, was a record of continuous improvement in the outlook. The Swarajists in the Indian Legislative Assembly proved to be of less account than in any session since their first entry into that body in January 1924. Their prestige similarly diminished in the Provincial Legislative Councils, where they had hitherto enjoyed dominating power. The proximity of the General Elections to all the legislatures in the autumn of the year filled them with the desire of some dramatic effort to catch the imagination of the constituencies and they consequently organised spectacular "walks-out" from the legislatures. The first took place in the Legislative Assembly. Every effort short of physical coercion was employed by the extremists to persuade or compel the President, the Hon. Mr. V. J. Patel, formerly Deputy Leader of the Swarajist party in the House, to accompany the move by quitting the chair. Had he done so, there would have been an awkward constitutional crisis. But Mr. Patel refused and the demonstration fell flat. The same may be said of corresponding efforts in the Provincial Councils.

But tension between the Hindu and Moslem communities, resulted in grave riots in Calcutta and in similar disturbances, less only in magnitude, in numerous smaller centres in Upper India. This increase of communal trouble was directly associated with the propaganda carried on by leaders of political opinion in preparation for and in connection with the General Elections. The elections themselves were marked by no riotous outbreak of importance, but they were fought on communal lines, not only as between Hindus and Moslems but as between Brahmins and non-Brahmins, and on lines of local personal and sectional rivalries, rather than on the broad lines of public policy.

An important development during the year was the presentation in August by the Royal Commission on Currency and Exchange of a report recommending that the functions hitherto exercised by Government in connection with these matters should in future be carried out by the newly instituted Indian Reserve Bank, that the Gold Standard Reserve and the Paper Currency Reserve should be amalgamated for the purpose and that there should be instituted a new Gold Bullion Standard, with the rupee exchange ratio fixed at 1*s.* 6*d.* gold. The Government of India, at the autumn session of their legislature, immediately after the issue of the report, announced their acceptance of the Commission's recommendation with regard to the exchange ratio and introduced a bill to give effect to it.

It was in this year that the Royal Commission on Indian Agriculture, under the chairmanship of Lord Linlithgow, was appointed and made its first visit to India.

Events in 1927.

Tension between the Hindu and Mahomedan communities continued during 1927 and was marked by several outbreaks of violence which drew from H. E. the Viceroy more than one weighty pronouncement and an offer to preside at a conference on the subject if the leaders of the two communities thought that any good purpose could thereby be served. More than one vain attempt was made, as in previous years to arrive at an agreement between the two communities, particularly on the most vexed questions of cow-killing and music before mosques. Towards the end of the year the announcement was made in Parliament of a purely Parliamentary Commission, under the chairmanship of Sir John Simon, to inquire into the Government of the country, and this aroused a storm of indignant protest throughout the country. The Liberals joined in the protest mainly because no Indians were included in the personnel of the Commission; the National Congress, which passed a resolution in favour of complete national independence, protested mainly on the ground that Parliament had no right to determine what should be the future form of government in India; and both these parties joined in proclaiming a boycott of the

Commission. The Mahomedans were divided on the question, but the majority of them were opposed to the boycott policy.

Apart from politics and long discussions involved by the Reserve Bank Bill, the year was memorable as one of disaster. Great floods occurred in Sind, Kathiawar, Gujarat and Orissa; a cyclone swept over Nellore; and a devastating fire took place in Peshawar—all making great demands on the resources of Government and the generosity of the public.

The visit of His Majesty the King of Afghanistan to Karachi and Bombay, on his way to Europe, was made the occasion for a very remarkable outburst of popular enthusiasm. His Majesty, who was accompanied by the Queen, stayed some days in Bombay and his replies to many addresses and his sermon in a mosque, advocating religious tolerance, created a great sensation.

Events of 1928.

When the year opened, the proposed boycott of the Simon Commission was the chief subject of discussion: when it ended the chief subject was the proposed acceptance of the Nehru Report. The faulty machinery of boycott, the tact of Sir John Simon, the eventual desire to prepare a constitution rather than fritter away energy upon a discredited policy were all responsible for the change. The Nehru Report was an answer to a challenge by Lord Birkenhead, and both the All-Parties Conference and the National Congress decided that neither Parliament nor the Simon Commission should doubt any longer what the "minimum" demands of progressive Indian opinion were to be.

The Donoughmore Report on Reforms in Ceylon has an indirect importance for India: the Linlithgow Report on Indian Agriculture is a document which has not yet received the attention it deserves. But more controversial has been the progress of the Butler Committee enquiring into the relations between the paramount power and the Indian States. Alarmed by possible developments in British India, the Indian Princes appointed Sir Leslie Scott to be their counsel, paying him probably the highest legal fee on record. Sir Leslie was the author of a controversial proposal for a scheme of federation between British India and the Princes. The support and publicity which the Princes received in London encouraged the subject of various Indian States to present a case of their own.

Politically, there have been many dangers. The peasants of Bardoli, refusing to pay the land tax on a new assessment and, at the instigation of some prominent political leaders, defying constituted authority, at least received an ultimatum from the Government, which compelled them to make a timely surrender. The Government of India had to sacrifice several valuable Bills in the Legislative Assembly.

Communal disturbances were numerous, while the publication of the Nehru Report led to unconditional opposition from the followers of Mr. Shaukat Ali. But almost worse than communalism has been the industrial disaffection which paralysed trade in Calcutta and Bombay and in Bombay led to a prolonged strike in the cotton industry, and to the ugly riots which marked the end of the year. The end of the year saw an intensive rebellion in Afghanistan, following several months after the King's return from his grand tour. The abdication of King Amanullah was followed by a period of chaos.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coast of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal); and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business

and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General is the sole representative of the Crown in India; he is assisted by a Council, composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it has the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of 1919.

THE REFORMS OF 1919.

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921. The Act was the outcome of an inquiry conducted in India in the winter of 1917-18 by the Secretary of State (Mr. Montagu) and the Viceroy (Lord Chelmsford), the results of which were embodied in their Report on Indian Constitutional Reform issued in the spring of 1918. The recommendations in this report were supplemented by those of two Committees which toured in India in the winter of 1918-19, and which issued their Reports in the spring of 1919. A third Committee was appointed during the latter year to make recommendations for the modification of the system of administration of Indian affairs in the United Kingdom, and issued their Report while the Government of India Bill was under examination by a Joint Select Committee of both Houses of Parliament. The Joint Select Committee in their turn issued an exhaustive Report on the Bill, which was passed in a form practically identical with that recommended by the Joint Committee, and received the Royal Assent on the 23rd December 1919.

The Divisions.—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or administration. In nine of the provinces—the three Presidencies of Madras, Bombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, Burma, and Assam—the Local Government consists of a Governor, an Executive Council of not more than four members, and two or more Ministers. In 1922 Burma, which was excluded from the original scheme, was brought into line with it. An Act of Parliament was passed, constituting Burma a Governor's Province, with a Governor, an Executive Council and Ministers and a Legislative Council elected on a very democratic franchise, which gave the vote to women. The remaining six provinces are directly administered by Chief Commissioners, who are technically mere agents of the Central Government of India. No change has been made by the Act of 1919 in the system of administration in these six minor provinces.

Dyarchy.—In these nine provinces the executive Government is a dual organism which owes its unity to the Governor. One half of the organism consists of the Governor and his executive Council, all of whom are appointed by the King. This body is responsible for the administration of those subjects which are "reserved." The other half of the executive organism is the Governor acting with the advice of Ministers who are appointed by him, hold office during his pleasure, and must be elected members of the Provincial Legislative Council. To the Governor acting with Ministers is entrusted the administration of "transferred" subjects.

The Object.—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification

of the previous system under which the Governments in India both central and provincial, received their mandates from the British Parliament acting through the Secretary of State for India, the Cabinet Minister responsible to Parliament for the administration of Indian affairs.

The Provinces.—Starting from the premise that it was in the provinces that the first substantial steps must be taken towards the development of a system of responsible government, the framers of the Act of 1919 provided for a statutory demarcation of the functions to be exercised by the Government of India and the Provincial Governments respectively in their administrative capacity. No attempt was made in this connection to limit the field open to the Indian Legislature, which still retains a concurrent (though not an overriding) power of legislation for the affairs of the provinces in general and of individual provinces; but the rules under the Act provide specifically for the exercise of this right in certain specified provincial matters, and the theory upon which the Act proceeds assumes that a convention will be established and rigorously observed which will confine intervention by the Indian Legislature in provincial affairs to matters so specified.

Finance.—The "revenues of India"—or, rather, their sources—are definitely divided between the Central and Provincial Governments; the Provincial Governments have now almost complete control over the administration of their "allocated" revenues, they have power to supplement them by raising loans on the security of these revenues, and their right, subject in certain cases to the Governor-General's sanction, to initiate new taxation measures is formally recognised.

It was found impossible to devise any scheme of allocation of revenues between the Central and Provincial Governments which did not leave the former with a deficit. This deficit is to be met in part by an annual contribution from seven of the eight Governors' provinces, the province of Bihar and Orissa, owing to the comparative exiguousness and inelasticity of its own revenues, having been exempted from this contribution. The aggregate sum thus due from the provinces to the Government of India at the outset is Rs. 983 lakhs, of which Madras contributes Rs. 348 lakhs, the United Provinces Rs. 240 lakhs, the Punjab Rs. 175 lakhs, and the other four provinces sums ranging from Rs. 15 lakhs to Rs. 64 lakhs. The annual contribution is in no case to be subject to increase in the future, and if reduction of the aggregate is found possible by the Government of India, reductions are to be made in fixed proportions from the quota of the several provinces.

Responsibility.—The first steps towards responsibility were to transform the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent. as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules have given the vote to about 5,000,000 of the adult male population, and have enabled the Legislative Council of any "Governor's province" to extend the franchise to women. The following table shows the strength and composition of each of the Provincial Councils :—

Province.	Elected.	Nominated and *ex-officio*.		Total.
		Officials.	Non-officials.	
Madras	98	23	6	127
Bombay	86	20	5	111
Bengal	113	20	6	139
United Provinces	100	18	5	123
Punjab	71	16	6	93
Bihar and Orissa	76	18	9	103
Central Provinces	53	10	5	68
Assam	39	9	5	53
Burma	78	15	8	101

The figures for officials in this table are maxima in every case, and where less than the maximum number of officials is nominated to any Council, the number of nominated non-officials must be increased in proportion; *e.g.*, if there are only 16 officials (nominated and *ex-officio*) on the United Provinces Council, there must be seven nominated non-officials. The official members who have seats *ex-officio* are the members of the Executive Council, who are at present four in number, the statutory maximum in Madras, Bombay, and Bengal, three in Bihar and Orissa, and two in each of the remaining provinces. These Executive Councils contain an equal

number of Indian and British members except in Bihar and Orissa where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities, and special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

Class of Electorate.	No. of Electorates of this Class.	No. of Members returnable by Electorates of this Class.
Non-Muhammadan	42	46
Muhammadan	34	39
European	3	5
Anglo-Indian (in the technical sense of persons of mixed European and Asiatic descent).	1	2
Landholders	5	5
University	1	1
Commerce and Industry	8	15
Total	94	113

Of the 94 constituencies in Bengal, all but nine those representing the University and Commerce and Industry) are arranged on a territorial basis, *i.e.*, each constituency consists of a group of electors, having the prescribed qualifications which entitle them to a vote in a constituency of that class, who inhabit a particular area. The normal area for a " Muhammadan " or "non-Muhammadan" constituency is a district (or where districts are large and populous, half a district) in the case of rural constituencies, and, in the case of urban constituencies, a group of adjacent municipal towns. Some large towns form urban constituencies by themselves, and the City of Calcutta provides eight separate constituencies, six "non-Muhammadan " and two " Muhammadan " the latter, of course, being coterminous with the former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those which are designed to represent special interests, such as Landholders, Universities, Planters or Commerce being described as "special" constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as 'general" constituencies.

Voters' Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province, chiefly on account of variations in the laws and regulations which form the basis of assessment of income or property values. Generally speaking, both in rural and urban areas the franchise is based on a property qualification as measured by the payment of a prescribed minimum of land revenue or of its equivalent, or of income tax, or of municipal taxes, but in all provinces retired, pensioned or discharged officers and men of the regular army are entitled to the vote, irrespective of the amount of their income or property.

Election Results.—A Parliamentary Paper (Cmd. 2923), published in 1927, gives the following summary of election results. This return relates to the third General Election which took place in 1926, except in the case of the Council of State and the Burma Legislative Council the elections to which took place in 1925. In these two cases the elections were the second under the Act of 1919, because the Council of State has a life-time of five years as compared with three years in the case of the Legislative Assembly and the Provincial Councils; and because the Reforms were inaugurated in Burma two years later than in other provinces.

The figures given for the number of electors who voted and the percentages of the number who voted to the number on the electoral roll are, in the case of plural member constituencies approximate only. In these constituencies each elector has as many votes as there are seats to be filled and the figures are calculated on the assumption that each elector used all his votes; that is, the figure given as the number of electors who voted is the result of dividing the number of votes polled by the number of seats to be filled.

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS.

In origin the legislative authority in British India was a meeting of the Governor-General (or, in the case of the Presidencies of Madras and Bombay, of the Governor) with his Executive Council, "for the purpose of legislation." When met for this purpose there were added to the Executive Council certain "additional members," at first very few in number, and those few all nominated by the Governor-General or the Governor, as the case might be. A Council so constituted had originally no powers or duties beyond those immediately arising out of the discussion of the particular legislative measure which at the time was engaging its attention, and its functions were confined strictly to the discussion and enactment of legislative measures. In course of time the number of "additional" members, and the proportion of these who were non-official Indians, were steadily increased, the principle of election was gradually substituted for nomination as the means of selecting non-official members, and the functions of the Councils were extended so as to include the right of interpellation, of the discussion of matters of general public interest, and of criticising and discussing the budget proposals of the Executive Government. This extension of the powers of the Councils was in the main the result of the "Morley-Minto Act" of 1909. The Indian Councils Act of 1892 had given power to discuss the budget but not to divide the Council upon it. Lord, Morley's Act went further and provided that notwithstanding the terms of the Indian Councils Act of 1861 which had restricted the powers of all Councils to the discussion of legislative measures, the Local Government might make rules authorising the discussion of the annual financial statement, of any matter of general public interest, and the asking of questions under such conditions and restrictions as might be imposed by the rules, and these rules recognised the right of the Councils to vote on motions thus submitted for their discussion. The other results of the Act of 1909 were definitely to recognise the principle of election as the means of selecting non-official members of all Councils (although the method adopted was mainly that of indirect election), a considerable increase in the number of both non-official and official members, and the setting up in every province of a non-official (though not, save in one province, an elected) majority. A further important, though indirect, result of the Morley-Minto Act was the appointment of an Indian member to the Executive Council of the Governor-General, and to such Provincial Executive Councils as were then in existence and subsequently created.

Old System.—But although the Legislative Councils (which, originally created in two provinces only in addition to the Governor-General's Legislative Council, existed in 1919 in nine provinces) had steadily acquired a more and more representative character and a large share of the normal functions of a legislative assembly as generally understood, they still remained in theory up to the passing of the Act of 1919 mere accretions to the Executive Government of the provinces for the purpose of advising on, and enacting, legislation. It is true that the non-official element in the Provincial Councils as constituted by Lord Morley's Act of 1909 had acquired a considerable measure of control over legislation, in view of the fact that in most provinces that Act and the rules framed under it placed the non-official members in a slight majority over their official colleagues; but for various reasons this control, even in the sphere of legislation, can hardly be described as definite popular control, and over matters outside the legislative sphere the Councils had no controlling voice at all.

The Changes.—The most important changes made by the Act of 1919 in the powers of the Provincial Councils were—

(*i*) the power to vote (and consequently to withhold) supplies;

(*ii*) a greatly enhanced freedom of initiation in the matter of legislation; and

(*iii*) power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence.

A further right which the Councils will acquire after four years from the time of their commencement is the right to elect their own President; At the outset the President is nominated by the Governor, but from the start every Council has an elected Deputy President. The Governor (who formerly was *ex-offico* President of his Legislative Council) no longer has any direct connection with its proceedings. The first-named of these newly acquired powers is of sufficient importance to require a detailed explanation of its scope, which can best be given in the terms of the Act itself (section 72D).

72D.—(1) The provisions contained in this section shall have effect with respect to business and procedure in governors' legislative councils.

(2) The estimated annual expenditure and revenue of the province shall be aid in the form of a statement before the council in each year and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed:—

Provided that—

(*a*) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject; and

(*b*) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department; and

(c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council.

(3) Nothing in the foregoing sub-section shall require proposals to be submitted to the council relating to the following heads of expenditure :—

(i) Contributions payable by the local government to the Governor-General in Council ; and

(ii) Interest and sinking fund charges on loans ; and

(iii) Expenditure of which the amount is prescribed by or under any law ; and

(iv) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council ; and

(v) Salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final.

Executive and Legislature.—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into "reserved" and "transferred" categories. The rules under the act prescribe a list of 20 subjects which are transferred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise, and Development of Industries. The "reserved" subjects comprise all those in the list of "provincial" (as distinct from "central") subjects which are not transferred.

Machinery.—No change has been made by the Act of 1919 in the machinery and methods of administration by the Governor in Council ; decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled, as before, to overrule such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains, as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of enforcing them despite opposition by a majority of the Legislative Council. But, the whole spirit of the Act, and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature, who, though they are not charged by law with, and in fact are legally absolved from, any responsibility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council. But these factors, while they will doubtless lead to constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government, and of the Secretary of State as a member thereof, to lay down and require the observance of any principles which they regard as having the support of Parliament and, in the last resort of the British electorate.

Transfer of Control.—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British elector and the British Parliament to the elector and the Legislative Council in the Indian province. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of "reserved" subjects or "departments," so each Minister is directly responsible for the administration of those particular transferred "departments" which are included in his portfolio. But his responsibility lies, not, as in the case of a member of the Executive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence not only of the Governor, but also of the Legislative Council, upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily qualify its control over the "reserved" subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate ; and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote. No doubt this statement requires some qualification before it can be accepted as literally accurate, for, technically, the authority charged with the administration of transferred subjects is "*the Governor acting with Ministers* appointed under this Act," not the Ministers acting on their own initiative, and, further the Governor, who is not, of course, subject to removal from office by the Legislative Council, is charged personally with responsibility for the peace and tranquillity of his province, and would be entitled, and indeed bound, to recommend the removal of a department from the transferred list if he found the legislature bent on pursuing a policy in its administration

which, in his judgment, was incompatible with the maintenance of peace and tranquillity; yet the powers of control vested in the Legislative Council over the transferred sphere are undoubtedly great, and it was the opinion at all events of the Joint Select Committee that legislature and Ministers should be allowed to exercise them with the greatest possible freedom. "If after hearing all the arguments," observed the Committee, "Ministers should "decide not to adopt his advice, then in the "opinion of the Committee the Governor should "ordinarily allow Ministers to have their way, "fixing the responsibility upon them, even if "it may subsequently be necessary for him to "vote any particular piece of legislation. It "is not possible but that in India, as in all other "countries, mistakes will be made by Ministers "acting with the approval of a majority of the "Legislative Council, but there is no way of "learning except through experience and "the realisation of responsibility."

Provision of Funds.—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the executive for the financing of reserved and transferred subjects respectively to be settled by rules, merely providing that rules may be made "for "the allocation of revenues or moneys for the "purpose of such 'administration' *i.e.*, the "administration of transferred subjects by the "Governor acting with Ministers". Probably the best description available of the method adopted by the rules for the settlement of this matter is the recommendation of the Joint Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time, at the desire of his Council and Ministers an "order of allocation" or to modify it in accordance with their joint wishes. The passage is as follows :—

"The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give-and-take, but they are aware that this question might, in certain circumstances, become the cause of much friction in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, find that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects, but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter as in all others, should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other, but not to exercise control over it. The budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects; but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers."

THE CENTRAL GOVERNMENT.

The structural changes made by the Act of 1919 in the system of government outside the nine "Governors provinces" are of comparatively minor scope, though the spirit of the Act requires, as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the reconstitution in a much more enlarged representative and independent form of the central legislature. It has already been observed that this body was, in origin, like all other legislative bodies in India, the Governor-General's Executive Council with the addition of certain "additional members" appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "additional members," who of course under Lord Morley's Act greatly preponderated in numbers over the members proper, *i.e.*, the Executive Councillors, still persisted up to the passing of the Act of 1919. That Act, however, has entirely remodelled the "Indian Legislature,"-

as it is now called, which has become, like the Legislative Council in a Governor's province a legislature with all the inherent powers ordinarily attributed to such a body save such as are specifically withheld by the terms of the Act. It consists of two Chambers. The "Council of State" contains 60 members, of whom 34 are elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar) and 26 nominated, of whom not more than 20 may be officials. The "Legislative Assembly" consists of 144 members, of whom 104 are elected (including in the case of the Council of State, one Berar member, who, though actually elected, is technically a nominee). Of the 40 nominated members, 26 are required to be officials. The members of the Governor-General's Executive Council are not *ex-officio* members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however, speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, is the President of the Legislative Assembly. But after that period the Lower Chamber is to elect its own President, and it elects its own Deputy-President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years; but either Chamber, or both simultaneously, may be dissolved at any time by the Governor-General.

Election.—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described, except that, *firstly*, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and *secondly*, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis; that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of the elective seats:—

	Legislative Assembly.	Council of State.
Madras	16	5
Bombay	16	6
Bengal	17	6
United Provinces ..	16	5
Punjab	12	4
Bihar and Orissa ..	12	3
Central Provinces ..	6	2
Assam	4	1
Burma	4	2
Delhi .. .	1	..
	104	34

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis is the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise.—The general result of the first franchise arrangements under the Act is thus that there is in each province a body of electors qualified to vote for, and stand for election to, the Provincial Council, and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province. The qualifications for candidature for the Legislative Assembly are the same in each province, *mutatis mutandis*, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate can show that he resides somewhere within the province, no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a "Senate of Elder Statesmen" and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Council, the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers :—The powers and duties of the Indian legislature differ but little in character within the "central" sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government

But as no direct attempt has yet been made to introduce responsible government at the centre, the step in that direction having been avowedly confined to the provinces, and as consequently the Executive Government of India remains legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it follows that the powers conferred on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or supplies are, as conferred on the Governor-General in his relationship with the Indian Legislature, less restricted in their operation than in the provinces; that is to say, they cover the whole field and are not confined in their application to categories of subjects.

THE INDIA OFFICE.

The Act makes no structural changes in the part played by the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which will undoubtedly as time goes on have a material effect on the activities of the Office as it is now constituted. A High Commissioner for India has been appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency, as distinct from administrative supervision and control. The process of separation of staff and functions for the purpose of this transfer will necessarily be somewhat slow, but a substantial beginning has been made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in the United Kingdom, and with the assistance of Indian students in England. Concurrently with this change, it is now possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected; then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however, an estimate was the only basis for settlement, and for five years from 1920-21, the cost of the India Office payable from British revenues has been fixed at 136,500*l*., which includes the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and a contribution of 40,000*l*., which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Welby Commission.

THE FUTURE.

The Act of 1919 and its provisions are essentially transitional. It is intended, not to set up a new and permanent constitution, but to make such changes in the law as will enable "the progressive realisation of responsible Government in British India as an integral part of the Empire." This feature of the Act was clearly expressed in its Preamble but although the Preamble finds no place in the law as amended by the Act of 1919, that law now contains provision for the appointment, after a period of 10 years' trial of the law in its amended form, of a Parliamentary Commission "for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions in British India, and matters connected therewith," and such a Commission, when appointed, is directed to "report as to whether it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing" in British India.

Statutory Commission appointed.—On November 8, 1927, the Prime Minister (Mr. Baldwin) made the following statement in the House of Commons, announcing the appointment, personnel and programme of the Statutory Commission on Indian Reforms.

"As the House will remember, one of the provisions contained in the Indian Reforms Act of 1919 required, "at the expiration of ten years after the passing" of that Act, the appointment, with the concurrence of both Houses of Parliament, of persons to be a Commission to inquire into the working of the Indian Constitution and to consider the desirability of establishing, extending, modifying, or restricting the degree of responsible government then existing there. The Government have decided, for various reasons which I need not now specify that it is desirable to anticipate the date (December, 1929) contemplated by the Act, and to appoint this most important Royal Commission forthwith.

Balancing the various considerations and endeavouring to give due weight to each, His Majesty's Government have decided upon the following procedure:—

(*a*) They propose to recommend to His Majesty that the Statutory Commission should be composed as follows:—

The Right Hon. Sir John Simon, K.C.V.O., K.C. (Chairman).
Viscount Burnham, G.C.M.G., C.H.
Lord Strathcona and Mount Royal.
The Hon. E. C. G. Cadogan, C.B.
The Right Hon. Stephen Walsh, (It was subsequently announced that owing to ill-health, **Mr. Walsh** would be unable to serve and **Mr. Vernon Hartsborn** was nominated in his place.)
Colonel the Right Hon. G. R. Lane-Fox.
Major C. R Attlee.

These names will be submitted to both Houses in Resolutions.

(*b*) His Majesty's Government cannot, of course, dictate to the Commission what procedure it shall follow but they are of opinion that its task in taking evidence would be greatly facilitated if it were to invite the Central Indian Legislature to appoint a Joint Select Committee chosen from its elected and nominated unofficial members, which would draw up its views and proposals in writing and lay them before the Commission for examination in such manner as the latter may decide. The Committee might remain in being for any consultation which the Commission might desire at subsequent stages of the inquiry. It should be clearly understood that the purpose of this suggestion is not to limit the discretion of the Commission in hearing other witnesses :

(*c*) His Majesty's Government suggest that a similar procedure should be adopted with the Provincial Legislatures :

(*d*) The vast area to be covered may make it desirable that the task of taking evidence on the more purely administrative questions involved should be undertaken by some other authority which would be in the closest touch with the Commission. His Majesty's Government suggest that the Commission on arrival in India should consider and decide by what machinery this work may most appropriately be discharged, this will not, of course, debar the Commission from the advantage of taking evidence itself upon these subjects to whatever extent it may think desirable :

(*e*) When the Commission has reported and its report has been examined by the Government of India and his Majesty's Government it will be the duty of the latter to present proposals to Parliament. But it is not the intention of his Majesty's Government to ask Parliament to adopt these proposals without first giving a full opportunity for Indian opinion of different schools to contribute its view upon them. And to this end it is intended to invite Parliament to refer these proposals to consideration by a Joint Committee of both Houses and to facilitate the presentation to that Committee both of the views of the Indian Central Legislature by delegations who will be invited to attend and confer with the Joint Committee and also of the views of any other bodies whom the Joint Parliamentary Committee may desire to consult.

The ante-dating of the Commission Involves an amendment of the Act, and a Bill to this end will be introduced at once."

PERSONNEL AND PROCEDURE.

The Governor-General and the "Executive" members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respectively the portfolios of Education, Health and Land ; Home ; Finance ; Commerce ; Industries and Labour : Law. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Chief Commissioner, with the assistance of a Railway Board ; and are for administrative purposes grouped under the ægis of the Commerce Department. The Commander-in-Chief may also be and in practice always is, an "Ordinary" member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become "extraordinary" members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints; in practice it meets only in Delhi and Simla.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, must ordinarily be referred to the Viceroy. Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily once or twice a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom; but with these differences—that the Secretary is present though does not speak, at Council meetings at which cases under his cognisance are discussed : that he attends on the Viceroy, usually once a week, and discusses with him all matters of importance arising in his Department ; that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council ; and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under-Secretaries are often, though by no means exclusively, members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces, or, in the case of Specialists, recruited direct by contract.

THE DIVISION OF FUNCTIONS.

The keynote of the scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the provinces all of which are raised to the status of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following subjects are reserved to the Government of India, with the

corollary that all others vest in the Provincial Governments:—

1. (*a*) Defence of India, and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments.

(*b*) Naval and military works cantonments.

2. External relations, including naturalisation and aliens, and pilgrimages beyond India.

3. Relations with States in India.

4. Political charges.

5. Communications to the extent described under the following heads, namely

(*a*) railway and extra-municipal tramways in so far as they are not classified as provincial subjects under entry 6 (*d*) of Part II of this Schedule;

(*b*) aircraft and all matters connected therewith; and

(*c*) inland waterways, to an extent to be declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

6. Shipping and navigation, including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 5 (*c*).

7. Light-houses (including their approaches) beacons, lightships and buoys.

8. Port quarantine and marine hospitals.

9. Ports declared to be major ports by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

10. Posts, telegraph and telephones, including wireless installations.

11. Customs, cotton excise duties, income-tax, salt, and other sources of all-India revenues.

12. Currency and coinage.

13. Public debt of India.

14. Savings Banks.

15. The Indian Audit Department and excluded Audit Departments, as defined in rules framed under section 96-D (1) of the Act.

16. Civil law, including laws regarding status, property, civil rights and liabilities, and civil procedure.

17. Commerce, including banking and insurance.

18. Trading companies and other associations.

19. Control of production, supply and distribution of any articles in respect of which control by a central authority is declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature to be essential in the public interest.

20. Development of industries, in cases where such development by a central authority is declared by order of the Governor-General in Council, made after consultation with the local Government or local Governments concerned expedient in the public interest.

21. Control of cultivation and manufacture of opium, and sale of opium for export.

22. Stores and stationery, both imported and indigenous, required for Imperial Departments.

23. Control of petroleum and explosives.

24. Geological survey.

25. Control of mineral development, in so far as such control is reserved to the Governor-General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines.

26. Botanical Survey.

27. Inventions and designs.

28. Copyright.

29. Emigration from, and immigration into, British India, and inter-provincial migration.

30. Criminal law, including criminal procedure.

31. Central police organisation.

32. Control of arms and ammunition.

33. Central agencies and institutions for research (including observatories), and for professional or technical training or promotion of special studies.

34. Ecclesiastical administration including European cemeteries.

35. Survey of India.

36. Archæology.

37. Zoological Survey.

38. Meteorology.

39. Census and statistics.

40. All-India services.

41. Legislation in regard to any provincial subject in so far as such subject is in Part II of this Schedule stated to be subject to legislation by the Indian legislature, and any powers relating to such subject reserved by legislation to the Governor-General in Council.

42. Territorial changes, other than inter-provincial, and declaration of law in connection therewith.

43. Regulation of ceremonial, titles, orders, precedence, and civil uniform.

44. Immovable property acquired by, and maintained at the cost of, the Governor-General in Council.

45. The Public Service Commission.

GOVERNMENT OF INDIA.

VICEROY AND GOVERNOR-GENERAL OF INDIA.

His Excellency the Right Hon. EDWARD FREDERICK LINDLEY WOOD, Baron IRWIN OF KIRBY UNDERDALE, G.M.S.I., G.M.I.E., *4th April* 1926.

PERSONAL STAFF OF THE GOVERNOR-GENERAL.

Private Secretary.—G. Cunningham, C.I.E., O.B.E., I.C.S.

Asst. Private Secretary.—W. le B.Egerton, I.C.S.

Military Secretary.—Lieut.-Col. C. O. Harvey, C.V.O., C.B.E., M.C.

(*g*) Created Earl of Lytton, 28 April 1880.

(*h*) Created Marquis of Dufferin and Ava 12 Nov. 1888.

(*i*) Created an Earl .. .. June 1911

(*j*) During tenure of office, the Viceroy is Grand Master and First and Principal Knight of the two Indian Orders (G.M.S.I., and G.M.I.E.). On quiting office, he becomes G.C.S.I. and G.C.I.E.; with the date of his assumption of the Viceroyalty.

The gradual evolution of the Indian constitution is fully traced in the article on "The Government of India," which precedes this; so also are the great changes made by the Reform Act of 1919. For the purposes of easy reference the powers of the Legislatures, as well as the special powers reserved to the Governor-General for the discharge of his responsibilities, which are fully set out in the Act, are reproduced below:—

21. (1) Every Council of State shall continue for five years, and every Legislative Assembly for three years, from its first meeting:

Provided that—

(*a*) either chamber of the legislature may be sooner dissolved by the Governor-General and

(*b*) any such period may be extended by the Governor-General if in special circumstances, he so thinks fit; and

(*c*) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months, or with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber.

22. (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non-official member of either chamber accepts office in the service of the Crown in India his seat in that chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers.

24. (3) If any Bill which has been passed by one chamber is not, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendments or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers. Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose, in order to discuss any difference of opinion which has arisen between the two chambers.

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may where a Bill has been passed by both chambers of the Indian legislature, return the Bill for reconsideration by either chambers.

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceeding in any court by reason of his speech or vote in either chamber, or by reason of anything contained in any official report of the proceedings of either chamber.

25. Indian Budget:—(1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year.

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General.

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

(*i*) interest and sinking fund charges on loans and

(*ii*) expenditure of which the amount is prescribed by or under any law; and

(*iii*) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and

(*iv*) salaries of chief commissioners and judicial commissioners; and

(*v*) expenditure classified by the order of the Governor-General in Council as—

(*a*) ecclesiastical;
(*b*) political;
(*c*) defence.

(4) If any question arises whether any proposed appropriation of revenue of money, does or does not relate to the above heads the decision of the Governor-General on the question shall be final.

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads or expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants.

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant.

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, by the legislative assembly.

(8) Notwithstanding anything in this section the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof.

26. Emergency Powers:—(1) Where either chamber of the Indian legislature refuses leave to introduce or fails to pass in a form recommended by the Governor-General any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

(*a*) if the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General, notwithstanding that it has not been consented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case

may be) in the form recommended by the Governor-General ; and

(*b*) if the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so consented to shall, on signature by the Governor-General, become an Act as aforesaid.

(2) Every such Act shall be expressed to be made by the Governor-General and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat; and upon the signification of such assent by His Majesty in Council and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to:

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

27. Supplemental provisions:—(1) In addition to the measures referred to in sub-section (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

(*a*) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature;

(*b*) repealing or amending any Act of a local legislature;

(*c*) repealing or amending any Act or ordinance made by the Governor-General.

(2) Where in either chamber of the Indian legislature any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill or any clause of it, or the amendment affects the safety or tranquillity of British India, or any part thereof, and may direct that no proceedings, or that no further proceedings, shall be taken by the chamber in relation to the Bill, clause, or amendment and effect shall be given to such direction.

THE LEGISLATIVE ASSEMBLY.

President:—The Honourable Mr. V. J. Patel.

Marshall:—Capt. Suraj Singh Bahadur, I.O.M.

A. Elected Members (104).

Constituency.	Name.
Madras City (Non-Muhammadan Urban). ..	Mr. Seshadri Iyengar Srinivasa Iyengar.

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its feudatories and Aden, an area of 187,074 square miles and a population of 26,757,648. Of this total 63,453 square miles are in Native States, with a population of 7,412,341. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,182 square miles and a population of 2,032,798.

With effect from the 10th October 1924 the States in the Cutch, Kathiawar and the Palanpur Agencies have been placed under direct political relations with the Government of India. The three agencies have been combined into one, the Western India States Agency, and placed under a first class Resident and Agent to the Governor General with headquarters at Rajkot. The territories under the rule of Indian Princes and Chiefs who are in direct political relations with the Government of Bombay extend now only to an area of about 28,562 sq. miles. The population of these States is about 4 millions and the revenue nearly 5 crores.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapti, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper, a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People.

The population varies as markedly as soil and climate. In Sind Mahomedans predominate. Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it; the population is much more homogeneous than in Gujarat, and thirty per cent. are Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindi, Gujarati, Marathi and Kanarese, with Urdu a rough *lingua franca* where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Sind the soils are wholly alluvial, and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague during the past twenty years. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surats. Bombay silver ware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay.

Number of Looms in Bombay Island.	74,545
Number of Spindles in Bombay Island.	34,68,826
Number of hands employed in the Textile Industry in Bombay Island.	154,398
Consumption of Cotton by the Mills in Bombay Island (bales)	994,500
Candies of 784 lbs. each	
Number of Spindles in Ahmedabad.	14,08,288
Number of Looms in Ahmedabad ..	30,224
Number of Spindles in Sholapore ..	289,432
Number of Looms in Sholapore ..	5,321
Number of Spindles in the Bombay Presidency (excluding Bombay Island)	23,94,185
Number of Looms in the Bombay Presidency (excluding Bombay Island)	48,243

Great impetus has been given to Bombay industries by the provision of electric power generated fifty miles away on the Ghats, and the year 1919 witnessed a phenomenal flotation of new industrial companies of almost every description.

The situation of Bombay on the western sea-board in touch at once with the principal markets of India and the markets of the West

has given Bombay an immense sea-borne trade. The older ports; Surat, Broach, Cambay and Mandvie; were famous in the ancient days; and their bold and hardy mariners carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concentrate it in modern ports with deep water anchorages; and the sea-borne trade of the Presidency is now concentrated at Bombay and Karachi, although attempts are being made to develop Mormugao in Portuguese territory into an outlet for the trade of the Southern Mahratta Country.

Administration.

The Presidency is administered by a Governor and an Executive Council of four members, with the assistance of three Ministers. The exact change made in the functions of the Provincial Governments is indicated in the section on the Provincial Governments (*q. v.*) where a description is given of the division of the administration into two branches, the Reserved Subjects, administered by the Governor and his Council and the Transferred Subjects, administered by the Governor and his Ministers, the whole Government commonly meeting and acting as one. In another part of that section the division between Reserved and Transferred subjects is shown. This new form of administration under the Reform Act of 1919 came into operation in January 1921. All papers relating to public service business reach Government through the Secretariat, divided into seven main departments, each under a Secretary (*a*) Finance; (*b*) Revenue; (*c*) Home and Ecclesiastical; (*d*) Political; (*e*) General, Educational and Marine; (*f*) Legal; (*g*) Public Works. The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government frequently moves. It is in Bombay from November to the end of March; at Mahableshwar from April to June; in Poona from June to November; but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is administered by four Commissioners. The Commissioner in Sind has considerable independent powers. In the Presidency Proper there are Commissioners for the Northern Division, with headquarters at Ahmedabad; the Central Division at Poona; and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each Taluka or group of village is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions. The control of the Government over the Native States of the Presidency is exercised through Political Agents.

Justice.

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and seven puisne judges, either Civilians, Barristers, or Indian lawyers. In Sind the Court of the Judicial Commissioner (The Judicial Commissioner and four Additional Judges) is the highest court of civil and criminal appeal. The growing importance of Karachi and Sind has, however, necessitated the raising of the status of the Judicial Commissioner's Court and the passing of the Sind Courts Act in August 1926, which contemplates the creation of a Chief Court for Sind with a Chief Judge and three or more Puisne Judges. The Act however has not yet been put into effect owing to financial difficulties. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilians, or members of the Provincial Service. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency, but original criminal work is chiefly disposed of by the Executive District Officers. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has five Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English County Courts.

Local Government.

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll and ferry funds. The tendency of recent years has been to increase the elective and reduce the nominated element. to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenues for water supply and drainage.

The City Municipalities Act of 1926 works further advance in the matter of local Self-Government in the Presidency. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Presidency. The larger municipalities are now styled as Municipal Boroughs which are now 29 in number. The executives of these Borough Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings

or buildings with annual rental values of Rs. 12 or with capital value of not less than Rs. 200.

Public Works.

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government; one for General Works and the other for Irrigation. Under them are Superintending Engineers in charge of divisions and Executive Engineers in charge of districts, with the Consulting Architect. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus and one perennial canal the Jamrao. The Sukkur Barrage project which was inaugurated in 1923 is the greatest Irrigation Scheme in the world and is designed to ensure the vast areas of fertile land in Sind a regular and constant supply of water. It will enable 6,000,000 acres of crops to be irrigated annually, *i.e.*, over 500,000 acres more than the total area irrigated in Egypt. The scheme is not only vital to the future of Sind but of indirect benefit to the whole of India. The whole scheme is estimated to cost over 3½ million sterling or over 18 crores of rupees. In the Presidency proper the principal protective works are the Nera Canal, Gokak Canal, Mutha Canal and the Godavari Canal Scheme. In addition there is under construction a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The Godavari canals were completed during the year 1917-18, and the two most important projects, namely, the Nera Right Bank Canal and the Pravara River Works system, which have been under construction since 1912 and 1911. The Nera Right Bank Canal is nearing completion. The Bandhardara Dam, the second highest yet constructed by Engineers the world over belonging to latter group was opened by His Excellency the Governor on 10th December 1926. The Lloyd Dam, which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened by H. E. Sir Leslie Wilson on 27th October 1928. It cost Rs. 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 21½ million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains 19 million cubic feet. It cost also nearly 50 per cent. more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

Police.

The Police Force is divided into 3 categories, *viz.*, District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Presidency proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. District and Railway Police in Sind are under the Deputy Inspector-General of Police for Sind, subject to the control of the Commissioner-in-Sind. The executive management of the Police in each district and on Railways in the Presidency proper as well as in Sind, is vested in a Superintendent of Police in a District under the general direction of the Magistrate of the District concerned. For the purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more Sub-Divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police or a Deputy Superintendent of Police. Inspectors are usually placed in charge of Circles comprising two or more Police Stations. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. On appointment Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education.

Education is imparted partly through direct Government agency, partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Poona, Gujarat and Dharwar; the Grant Medical College, the Poona College of Engineering, the Agricultural College, Veterinary College, School of Art, Law School and a College of Commerce. The Royal Institute of Science is now open in Bombay. Most of the secondary schools are in private hands. The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City. (*q. v.*, Education).

The Quinquennial Report on Public Instruction in the Bombay Presidency for the years 1922-1927 reveals much information regarding the progress of education in recent years. The most notable event of the quinquennium was the passing in 1923, of the Primary Education Act whereby the control of Primary Education was transferred from the Department to the Local Authorities. Most of the Boards have prepared schemes for the expansion of education, some of them on a compulsory basis, and many boards have levied additional taxation but the finances of Government have not permitted them to perform to the full the part contemplated by the Act. The fact, however, must not be lost sight of that during the quinquennium the assignments of Government to Primary Education rose from Rs. 97,38,154 to Rs. 1,21,59,839, the greater part of which was swallowed up by the increase in the pay of Primary teachers. "It is early to pronounce on the results of the transfer of control of the District Local Board Schools," says the Director of Public Instruction. "The control now exercised by the Boards is a very great—greater, it is believed than in any other Province in India and, except for financial purposes, the supervision of the Department has been reduced to a minimum." The chief result of the Reforms is the emphasis they have given to differences of religion and caste, owing to the system of special

representation which they have set up, and nowhere have the evils of communalism been more conspicuous than in the administration of the Primary Schools by the Local Authorities.

The quinquennium has been noticeable for the greater recognition given to the Educational needs of the Backward classes especially in Primary Education and a very liberal system of scholarships in Secondary Schools and Colleges for these classes has been introduced.

Lack of funds has not cramped the activities of Government in the field of Primary Education only. Economy has been the dominating note of the Educational policy throughout the quinquennium. So far from it being possible to provide the funds required for the expansion of Secondary and Higher Education, it has been necessary to exercise retrenchment, and that too in directions in which it could not be applied without educational loss. As one instance only, the Director of Public Instruction mentions the discontinuation of the scheme of Medical Inspection after it had been in existence for a year. Among the chief purposes for which additional funds are required, perhaps the most important is that for additional provision for Technical and Industrial Education, including the expansion of the College of Engineering and the establishment of a Technological institution of an advanced nature. In spite, however, of the inability of Government to provide all the funds that are required, advance has been made, if additional expenditure and increased numbers can be held to be regarded as evidence of advance, and it is a noticeable fact that the expenditure from local sources increased from Rs. 125 lakhs to over Rs. 183 lakhs or about 47 per cent.

The total number of institutions increased during the quinquennium by 1,378 to 16,211. Recognised institutions increased by 1,542 to 14,784 while unrecognised institutions decreased by 154 to 1,427. Of the recognised institutions, 15 are Arts and 10 Professional Colleges, 529 Secondary Schools, 13,835 Primary Schools and 395 Specials schools. The 13,835 Primary schools were distributed among 10,244 out of 26,731 inhabited towns and villages, the number of towns and villages with Primary schools showing an increase of 557 during the quinquennium.

The total number of pupils of all kinds receiving instruction was 1,148,714 an increase of 194,261 over the figure for 1921-22, and of 74,614 over that for 1925-26. Of these 925,855 were boys and 222,859 girls. Of the total number under instruction 4,819 were Europeans, 32,488 Indian Christians, 881,752 Hindus (including Aboriginal and Depressed Classes), 207,974 Muhammadans, 17,721 Parsis and 3,960 others.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy Inspector with Assistants in each district. Higher education is controlled by the Bombay University (established in 1857) consisting of the Chancellor (the Governor of the Presidency), the Vice-Chancellor appointed by Government for two years), and 100 Fellows of whom 10 are *ex-officio*; 10 elected by the Graduates, 10 by the Faculties, and 80 are nominated by the Chancellor.

Proposals have been recently put forward by the Committee on University Reform for the reorganization of the University on sounder lines, but these are still under the consideration of the authorities. A Bill to amend the University Act is before the Legislature.

The principal educational institutions are:—

Government Arts Colleges—

Elphinstone College, Bombay, Principal, Mr. H. Hamill, M.A.

Deccan College, Poona, Principal, Mr. H. G. Rawlinson, M.A.

Gujarat College, Ahmedabad, Principal, G. Findlay Shirras, M.A., F.S.S. (Offg.)

Karnatak College, Dharwar, Principal, Mr. H. V. Hampton, M.A.

Private Arts Colleges—

St. Xaviers, Bombay (Society of Jesus), Principal, Rev. Father Duhr, S. J.

Wilson College, Bombay (Scottish Mission), Principal, Rev. J. Mackenzie, M.A.

Fergusson College, Poona (Deccan Educational Society), Principal, K. R. Kanitkar, M.A., B.Sc.

Baroda College, Baroda (Baroda State), Principal, S. G. Barrow, B.Sc.

Samaldas College, Bhavnagar (Bhavnagar State), Principal, Mr. T. K. Shahani, M.A.

Bahauddinbhai College, Junagadh State Principal, Mr. M. M. Joshi, M.A.

Special Colleges—

Grant Medical College, Bombay (Government), Dean, Captain S. L. Bhatia, I.M.S.

College of Engineering, Poona (Government), Principal, Mr. C. Graham. Smith, O.B.E.

Agricultural College, Poona (Government), Principal, Dr. William Burns.

Chiefs' College, Rajkot, Principal, Mr. J. T. Turner.

College of Science, Ahmedabad.

Law College, Bombay, Principal, Dr. J. S. Khergamvala, LL. D. (London.)

College of Commerce, Bombay, Principal, Mr. M. L. Tannan.

Veterinary College, Bombay, Mr. K. Hewlett.

Haffkine Institute, Bombay, Director, Lt.-Col. F. P. Mackie, I.M.S.

Sir J. J. School of Art, Bombay (Government), Principal, Mr. W. E. G. Solomon.

Victoria Technical Institute, Bombay. Principal, Mr. A. J. Turner, B.Sc., F. I. C.

Medical.

The Medica Department is in the charge of the Surgeon-General and Sanitation in that of the Director of Public Health, both members of the Indian Medical Service. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district; whilst sanitation is entrusted to one of the Assistant Directors of Public Health. Three large hospitals are maintained by the Government in Bombay, and arrangements are being made to increase the hospital accommodation in the City. It is hoped to set up in the near future not less than 850 additional beds in the various hospitals of the city. Well-equipped hospitals exist in all important up-country stations. Over three million persons including 81,000 in-

patients are treated annually. The Presidency contains 6 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is carried out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Finance.

Under the Reform Scheme of 1919 Provincial Finance entered on a new phase. Before the passing of this Act Provincial finance was incorporated in Imperial Finance. The Provinces had certain heads of revenue of their own and other heads which they divided with the Government of India. By the new constitution a comparatively clean cut was made between the finances of the Government of India and those of the Provinces. Such revenues as they enjoy the Provinces enjoy in full, and in return they make cash contributions to the Government of India, fixed for a term of years. The general principle underlying this settlement is that those contributions shall gradually disappear. The present contribution of the Government of Bombay is Rs. 56 lakhs.

Estimated Revenue for 1928-29.

	PRINCIPAL HEADS OF REVENUE.	Rs.
V	Land Revenue	5,38,00,000
VI	Excise	3,91,18,000

Hon. Aides-Camp.—Captain E. V. Whish O.B.E., R.I.M., Port Officer, Captain F. Seymour-Williams, 3 (Bom.) Coy., D.S.O., R. E., A.F.I. Meherban Shankarrao Parashramrao Ramchandra *alias*. Appa Saheb Patwardhan; Chief Of Jamkhandi, Honorary Captain Meherban Malojirao Mudhojirao *alias* Nana Saheb Naik Nimbalkar, Chief of Phaltan; Honorary Captain Kumar Shri Naharsinghi of Baria.

Commandant, H. E. the Governor's Bodyguard.—Major H. de N. Lucas, 7th Light Cavalry.

Adjutant, H. E. The Governor's Bodyguard.—Capt. E. D. Holder, Skinners Horse.

Indian Aide-de-Camp—Risaldar Major Lakhpat Singh, 8th King George's Own Light Cavalry.

Members of Council and Ministers.

The Hon'ble Mr. J. L. Rieu, C.S.I., I.C.S. (Revenue); The Hon. Mr. J. E. B. Hotson, C.S.I., I.C.S. (Home); The Hon. Sir Gulam Husain Hidayatallah (General); The Hon. Mr. G. B. Pradhan (Finance); The Hon. Dewan Bahadur Harilal Desai (Local Self-Government); The Hon. Moulvi Rafiuddin Ahmad (Education); and the Hon. Mr. B. V. Jadhav (Agriculture.)

The Educational portfolio includes, among other subjects, Medical Administration, Public Health, Sanitation and Industrial Development. The Minister of Local Self-Government also deals with Public Works (roads and buildings) and the Civil Veterinary Department; while Agriculture, Co-operative Societies, Registration and some other matters are in charge of the Minister of Forests and Excise.

SECRETARIES TO GOVERNMENT.

Revenue Department.—J. W. Smyth, M.A., I.C.S.

Home and Ecclesiastical Department.—H. F. Knight, I.C.S.

Chief Secretary, Political Department.—James Rea Martin, C.I.E., B.A., I.C.S. (Acting).

Secretary, General, Educational and Marine Departments—C. W. A. Turner, B.A., I.C.S.

Secretary, Finance Department:—Gilbert Wiles, B.A., I.C.S.

Legal Department and Remembrancer of Legal Affairs.—Balak Ram, I.C.S.

Public Works Department.—R. T. Harrison.

Public Works Department, Joint Secretary—Denis Robert Howe Browne, O.B.E.

MISCELLANEOUS APPOINTMENTS.

Advocate-General—Sir Jamshedji Behramji Kanga, Kt., M.A., LL.B.

Inspector-General of Police—F. C. Griffith, C.S.I., O.B.E., (on leave); G. S. Wilson (*Offg.*)

Director of Public Instruction—F. B. P. Lory, M.A.

Surgeon-General—Lt.-Col. R. W. Anthony, I.M.S.

Oriental Translator—Sayed Moniruddin S Moulvie.

Chief Conservator of Forests—H. L. Newman.

Talukdari Settlement Officer,—A. W. Mackie, I.C.S.

Settlement Commissioner and Director of Land Records—F. G. H. Anderson, I.C.S.

Director of Agriculture—Dr. T. F. Main, O.B.E., D.S.C.

Registrar of Co-operative Societies—V. S. Bhide, I.C.S.

Municipal Commissioner, Bombay—A. R. Dalal, I.C.S.

Vice-Chancellor, Bombay University—Sir Chimanlal H. Setalvad.

Registrar, Bombay University—Fardunji M. Dastur.

Commissioner of Police, Bombay—P. A. Kelly, C.I.E.

Director of Public Health—Lt.-Col. H. Melhuish, I.M.S.

Accountant-General—I. C. Nixon, I.C.S.

Inspector-General of Prisons—Lt.-Col. J. H. Murray, C.I.E., I.M.S.

Postmaster-General—D. Banerji, N.A.I.E.E.

Commissioner of Customs, Salt, Opium and Excise—J. P. Brander, I.C.S.

Collector of Customs, Bombay—A. M. Green, I.C.S.

Consulting Architect to Government—A. J. A. Illingworth.

Consulting Surveyor to Government—A. E. Mirams, F.S.I., F.S.A., F.R.S.A.

Registrar of Companies—H. C. B. Mitchell.

Director of Information and Labour Intelligence:—J. F. Gennings, Bar-at-Law.

Sheriff—Sir Reginald Spence, Kt.

GOVERNORS OF BOMBAY.

Sir Abraham Shipman 1662
Died on the island of Anjediva in Oct. 1664
Humfrey Cooke 1665
Sir Gervase Lucas 1666
Died, 21st May 1667.
Captain Henry Garey (*Officiating*) .. 1667
Sir George Oxenden 1668
Died in Surat, 14th July 1669.
Gerald Aungier 1669
Died in Surat, 30th June 1677.
Thomas Rolt 1677
Sir John Child, Bart. 1681
Bartholomew Harris 1690
Died in Surat, 10th May 1694.
Daniel Annesley (*Officiating*) 1694
Sir John Gayer 1694
Sir Nicholas Waite.. 1704
William Aislabie 1708
Stephen Strutt (*Officiating*) 1715
Charles Boone 1715
William Phipps 1722
Robert Cowan 1729
Dismissed.
John Horne 1734
Stephen Law 1739
John Geekie (*Officiating*) 1742

William Wake 1742
Richard Bourchier.. 1750
Charles Crommelin.. 1760
Thomas Hodges 1767
Died, 23rd February 1771.
William Hornby 1771
Rawson Hart Boddam 1784
Rawson Hart Boddam 1785
Andrew Ramsay (*Officiating*) 1788
Major-General William Medows 1788
Major-General Sir Robert Abercromby, K.C.B. (*a*). 1790
George Dick (*Officiating*) 1792
John Griffith (*Officiating*).. 1795
Jonathan Duncan 1795
Died, 11th August 1811.
George Brown (*Officiating*) 1811
Sir Evan Nepean, Bart. 1812
The Hon. Mountstuart Elphinstone .. 1819
Major-General Sir John Malcolm, G.C.B. 1827
Lieut.-General Sir Thomas Sidney Beckwith, K.C.B. 1830
Died, 15th January 1831.
John Romer (*Officiating*) 1831
The Earl of Clare 1831
Sir Robert Grant, G.C.H. 1835
Died, 9th July 1838.
James Farish (*Officiating*) 1838
Sir J. Rivett-Carnac, Bart. 1839
Sir William Hay Macnaghten, Bart. (*b*) . ..
George William Anderson (*Officiating*) .. 1841
Sir George Arthur, Bart., K.C.H. 1842
Lestock Robert Reid (*Officiating*) .. 1846
George Russell Clerk 1847
Viscount Falkland 1848
Lord Elphinstone, G.C.H., P.C. 1853
Sir George Russell Clerk, K.C.B. (2nd time) 1860
Sir Henry Bartle Edward Frere, K.C.B. 1862
The Right Hon. William Robert Seymour Vesey FitzGerald. 1867
Sir Philip Edmond Wodehouse, K.C.B. .. 1872
Sir Richard Temple, Bart., K.C.S.I. .. 1877
Lionel Robert Ashburner, C.S.I. (*Acting*).. 1880
The Right Hon. Sir James Fergusson, Bart., K.C.M.G. 1880
James Braithwaite Peile, C.S.I. (*Acting*).. 1885
Baron Reay 1885
Baron Harris 1890
Herbert Mills Birdwood, C.S.I. (*Acting*) .. 1895
Baron Sandhurst 1895
Baron Northcote, C.B. 1900
Sir James Monteath, K.C.S.I. (*Acting*) .. 1903
Baron Lamington, G.C.M.G., G.C.I.E. .. 1903
J. W. P. Muir-Mackenzie, C.S.I. (*Acting*). 1907
Sir George Sydenham Clarke, G.C.M.G., G.C.I.E. (*c*). 1907
Baron Willingdon, G.C.I.E. 1913
Sir George Ambrose Lloyd, G.C.I.E., D.S.O.(*d*) 1918
Sir Leslie Orme Wilson, P.C., G.C.I.E., C.M.G., D.S.O. 1923
Sir Frederick Hugh Sykes, P.C., G.C.I.E. .. 1928
G.B.E., K.C.B., C.M.G.

(*a*) Proceeded to Madras on duty in Aug. 1793 and then joined the Council of the Governor-General as Commander-in-Chief in India on the 28th Oct. 1793.

(*b*) Was appointed Governor of Bombay by the Honourable the Court of Directors on the 4th Aug. 1841, but, before he could take charge of his appointment, he was assassinated in Cabul on the 23rd Dec. 1841.

(*c*) Afterwards (by creation) Baron Sydenham

(*d*) Afterwards (by creation) Baron Lloyd

BOMBAY LEGISLATIVE COUNCIL.

The Hon. Mr. A. M. K. Dehlavi, Bar-at-law, *President.*

Rao Bahadur S. T. Kambli, *Deputy President.*

ELECTED MEMBERS.

The Madras Presidency.

The Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the Native States, most of which have now come under the direct control of the Government of India, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,200 miles; on the South on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, and perhaps of Cochin, are merely open roadsteads. A plateau, varying in height above sea-level from about 100 to about 300 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rainclouds are not checked in their westward course. In the central table land on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country; but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1921 as 42,794,155, an increase over the figure of 1911 of 2·2 per cent. The tendency has been for the more densely populated portions of the province to increase their numbers while the sparsely inhabited tracts have still further declined in density. Hindus account for 89 per cent. of the population, Mahomedans for 7, Christians for 3, Animists for 1. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu, are spoken by 18 and 16 million persons respectively. Of every thousand people, 410 speak Tamil, 377 speak Telugu, 75 Malayalam, 37 Oriya, 35 Canarese and 23 Hindustani.

Government.

The Madras Presidency is governed on the system generally similar to that obtaining in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs, however, in some important respects from that of other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at headquarters, Commissioners of Divisions being unknown in Madras. Another feature peculiar to the Southern Presidency is the manner of choice of the ministers. Following the practice of the Mother of Parliaments, Madras Governors have, even since the inception of the Reforms, called upon the leader of the dominant party to form a ministry, giving him freedom to select his colleagues on the ministry. Consequently he enjoys the status of Chief Minister—unknown in other provinces in India.

Agriculture and Industries.

The principal industry of the province is agriculture in which 68 per cent. of the population is engaged. The principal food crops are rice, cholam, ragi and kambu. The industrial crops are cotton, sugar-cane and groundnuts. Agricutural education is rapidly progressing in the presidency with a well known college at Coimbatore, with classes for juvenile and adult labourers attached to it, one agricultural middle Schools and numerous demonstration farms. The opening of two more schools have been sanctioned. While paddy, which is the staple food, of the population, occupies the largest cultivable area, cotton is by no means an inconsiderable crops of the province and is receiving close attention at the hands of local agricultural authorities. The area under cotton is estimated at 2,303,688 acres and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. Side by side with an increase in the area under cotton, there has been a strict exclusion of inferior cotton from existing good staple areas, while improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as a registered body under the title of "The United Planters' Association of South India," on which are represented Coffee, tea, rubber and a few other minor planting products. There are some 23 cotton mills in the Presidency which employ 34,000 operatives. Minor industrial concerns number over 120 and consist of oil mills, rope, rubber and tile works. Tanning is one of the principal industries of the Presidency, and there is considerable export trade in skins and hides although hide tanners have not been doing well of late. The manufacturing activities which are at present under the direction of the Department of Industries are mainly confined to the production of soap and inks. The matchmaking industry is just raising its head in Madras. In 1927 the Council complied with a demand made by the minister in charge of Industries for funds for appointing a special officer to conduct an exhaustive survey of the existing and potential cottage industries in the Presidency. The Special Officer has since been appointed and the survey is in progress. Preliminary reports on the survey in the Ceded districts and the districts of Madura, Ramnad, Trichinopoly and Tinnevelly have already been published and are also being considered by the Government. The aggregate value of seaborne trade of the Presidency has been showing a steady increase and is now in the neighbourhood of Rs. 80 crores per annum. As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

Education.

The Presidency's record in the sphere of education has been one of continuous progress. There are at present about 50,000 public institutions, ranging from village primary schools to arts and professional colleges, their total strength being about 2,500,000. Special efforts

are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the past year at the instance of a nominated member that poor girls reading in any educational institution in the province—Government, local fund, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs. 452 lakhs. The principal educational institutions in the province are the Presidency College, the Christian College and Pachaiyappa's College, Madras; the St. Joseph's College, Trichinopoly; the Government College, Kumbakonam; the Government College, Rajamundry; the Maharaja's College, Trivandrum; the Agricultural College, Coimbatore; and the Medical and the Engineering Colleges at Madras.

Cochin Harbour Scheme.

The Government of Madras and the authorities of the Cochin and Travancore States have come to an agreement regarding the financing of the Cochin Harbour scheme. The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland which is at present far removed from any convenient port. The scheme is to cut a passage through the bar which blocks the entrance from the sea to an extensive backwater. A trial cut was made in 1923 and the effect of the monsoon thereon observed. The results recorded were examined by a committee of Harbour Engineers in England which reported favourably on the prospects of the scheme. The plant necessary for effecting a deeper and wider cut has been secured and the work is in progress. Everything had been prepared at Cochin for proceeding with the major works and with the arrival of the dredger and the pipe line on the lines of the Bombay plant work is progressing rapidly. During the working season of 1927-28 the first part of the channel across the bar has been completed. The channel is 11,026 feet long and 400 feet wide. The depth of the outer half is from 34 to 35 feet L. W. O. S. T. and of the inner half from 30 to 32 feet at L. W. Small steamers have entered the backwater during the S. W. monsoon period of 1928. If access through the bar can be established at all periods of the year, a portion of the backwater will be dredged to afford anchorage for ocean-going steamers.

Vizagapatam Harbour Project.

Even more pregnant with future possibilities is the scheme for the development of the Vizagapatam harbour. Proposals for the development of the port at this place have been under consideration since 1859; but the success of the project is bound up with the construction of direct railway communication between Vizagapatam and the Central Provinces; for the quantity of trade which could be obtained from the littoral itself is insufficient to justify the capital expenditure which would be required. In May 1925 the Government of India declared Vizagapatam a major port thereby enabling the development of the port under the directions of the Central Government. Preliminary operations commenced in the end of the year and were continued vigorously in 1926 with the aid of dredgers and rock-breakers. It is expected that the construction of the harbour will take four or five years. The surrounding hill-sides and adjacent areas will meanwhile be developed for industrial, trading and residential purposes.

Local Self-Government.

As in Bombay, the Madras District Municipalities and Local Boards Acts have been amended in various directions, all of which tend towards liberalisation. Legislation has also been passed permitting the establishment of Village Panchayats, or Committees of Elders. Over 2,500 Panchayats have come into existence in the Presidency. Generally speaking the Local Boards in Madras display a courageous disposition to levy taxes up to the sanctioned maximum. Even then some of them are unable to make both ends meet. Local Bodies in the Presidency have been enabled to levy a tax on entertainments by the Madras Local Authorities Entertainments Tax Act, 6192.

Irrigation.

In March 1925, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounts to £ 4½ millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres; the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which is expected to be completed before 1933 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic feet of water and for a canal nearly 88 miles long with a connected distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate stands at about £ 5½ millions. Another important project is the Periyar project which is intended not only for irrigation purposes but also for providing water power for generating electricity. Taking its rise in the Western Ghats, the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East. Some three thousand feet above sea-level a concrete and masonry dam has been constructed and nearly 50 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,660 million cubic feet. By this work, a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating in its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 142,749 acres, while the supply from the lake was sufficient only for 130,000 acres. To make up for this deficit, Government contemplate increasing the effective capacity of the lake by lowering the water-shed cutting at an estimated cost of Rs. 2½ lakhs. The area already under irrigation in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000

Electric Schemes.

Of the major schemes that have been receiving Government's attention, a hydro-electric undertaking whose details are expected to be announced in the near future, is by far the most important. The protracted negotiations regarding the purchase by the Madras Government of what is known as the Pykara concession, which includes a huge and powerful water-fall have concluded and it has been decided to work the scheme as a government venture. It has indeed been publicly announced that Government do not propose to hand over either this water-fall or any other source of water power to any private syndicate for development. A member of the American Institute of Electrical Engineers with wide experience of big hydro-electric schemes in Canada has been appointed for five years to be in sole charge of the Pykhara Scheme. A proposal to electrify some portions at least of the railways in South India is also under the consideration of the Government.

Madras Hydro-electric Schemes.

The Chief Engineer has recently submitted Government detailed reports on the Pykhara-Hydro-Electric Development including a study from the financial standpoint.

An introductory report on the Papanasam Project has also been received.

Pykhara Project.

The main development differs very little from that described in the introductory report issued a few months ago. The estimates are, however, somewhat lower and the ultimate return on the invested capital more favourable.

Three schemes, *a*, *b* and *c*, have been submitted. The first two assume the electrification of certain sections of the South Indian Railway over a varying period of years, and the transmission of power to Madura, Trichinopoly, and Dindigul in addition to the Coimbatore area and the Nilgiris. The third scheme assumes that the South Indian Railway will decide not to electrify, and contemplates only the transmission of power to the Coimbatore area and the Nilgiris. None of the schemes includes Madras at the outset, but the Chief Engineer is of opinion that within a few years of the inauguration of an extensive hydro-electric-power service, it will have been found economically feasible to extend the transmission line to Madras.

If hydro-electric development is to be undertaken in this part of the Presidency on a scale comparable with the needs of industry and the public in general and, at the same time, operated on a round commercial basis, the revenue derived from the proposed railway load is absolutely necessary to help in covering operation and maintenance expenses during the first few years while the power market is being developed. Without the railway load, development must be along more modest lines and can only include the Coimbatore and Nilgiris area to begin with.

The Chief Engineer has kept the South Indian Railway authorities fully informed of the progress of the investigations and they appear to be generally in favour of a restricted electrification programme.

The Railway Board have, it is understood, referred the electrification plans of their Engineers together with the power proposals of the Madras Government to Messrs. Merz & Partners, Consulting Engineers, and their report is stil awaited. The extent, therefore, of the initial development of hydroelectric power in the areas under review may depend mainly upon the recommendations of Messrs. Merz & Partners to the Railway Board, and, until these are known, it is not possible to decide which of the three schemes is to be developed.

Such drawings and specifications are as common to all the three schemes are being prepared in order that no delay will take place, once the construction of one of the schemes is sanctioned. It should, however, be realized that on a project of such magnitude a considerable amount of labour and detailed work is necessary before the working plans and specifications can be completed.

Only preliminary survey, investigation of foundations, and similar studies have as yet been undertaken at Pykara, but Government have under consideration the question of the immediate construction of certain preparatory works which are common to all the schemes. Once the construction of these works is initiated, it will be possible in about a year to give a light and power service in the Nilgiris from the auxiliary construction plant.

The proposed rates for light and power as estimated by the Chief Engineer are attractive and, after a few years, a reduction can be anticipated. At the same time a satisfactory and increasing return on the capital invested seems reasonably assured.

Distribution.—Government are studying the possiblity of introducing regulations for the distribution and sale of electrical energy, whereby an electric service, at low rates, will be assured to the ultimate consumer and the power market properly developed. Such regulations would be based on those in force in most progressive countries, but modified to suit local conditions.

Pending decision of the Railway Board re: the electrification of the main line sections on the South Indian Railway, the Government have sanctioned the construction of a smaller scheme (The Glen Margen Hydro-Electric Scheme) at a cost of Rs. 12.80 lakhs and work on it is now in progress. Power is expected to be ready for supply from this auxiliary source from about the middle of 1929, and the area to be served will for the present be confined to Ootacamund, Coonoor, Wellington and the neighbouring tea estates.

Papanasam Project.

An introductory report on this development has been prepared by the Chief Engineer and is now being studied by Government. Sufficient information is available to base power costs and formulate tariffs for light and power. Before additional expenditure is incurred on investigations and studies in the field, or on plans and estimates, it is proposed to endeavour to obtain a definite guarantee of a fixed block of power, so that a certain revenue will be available while the potential and promising power market around Tinnevelly, Tuticorin and neighbouring districts is being developed. With this end in view, negotiations are now in progress with certain industrial interests.

Other Projects.

As soon as it is possible, certain other promising hydro-electric projects are to be studied in detail, while those of lesser importance will be carefully investigated and the details filed for future reference. It is the intention of Government in the course of time to prepare plans for a comprehensive electric power generation and

are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the past year at the instance of a nominated member that poor girls reading in any educational institution in the province—Government, local fund, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs. 452 lakhs. The principal educational institutions in the province are the Presidency College, the Christian College and Pachaiyappa's College, Madras; the St. Joseph's College, Trichinopoly; the Government College, Kumbakonam; the Government College, Rajamundry; the Maharaja's College, Trivandrum; the Agricultural College, Coimbatore; and the Medical and the Engineering Colleges at Madras.

Cochin Harbour Scheme.

The Government of Madras and the authorities of the Cochin and Travancore States have come to an agreement regarding the financing of the Cochin Harbour scheme. The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland which is at present far removed from any convenient port. The scheme is to cut a passage through the bar which blocks the entrance from the sea to an extensive backwater. A trial cut was made in 1923 and the effect of the monsoon thereon observed. The results recorded were examined by a committee of Harbour Engineers in England which reported favourably on the prospects of the scheme. The plant necessary for effecting a deeper and wider cut has been secured and the work is in progress. Everything had been prepared at Cochin for proceeding with the major works and with the arrival of the dredger and the pipe line on the lines of the Bombay plant work is progressing rapidly. During the working season of 1927-28 the first part of the channel across the bar has been completed. The channel is 11,025 feet long and 400 feet wide. The depth of the outer half is from 34 to 35 feet L. W. O. S. T. and of the inner half from 30 to 32 feet at L. W. Small steamers have entered the backwater during the S. W. monsoon period of 1928. If access through the bar can be established at all periods of the year, a portion of the backwater will be dredged to afford anchorage for ocean-going steamers.

Vizagapatam Harbour Project.

Even more pregnant with future possibilities is the scheme for the development of the Vizagapatam harbour. Proposals for the development of the port at this place have been under consideration since 1859; but the success of the project is bound up with the construction of direct railway communication between Vizagapatam and the Central Provinces; for the quantity of trade which could be obtained from the littoral itself is insufficient to justify the capital expenditure which would be required. In May 1925 the Government of India declared Vizagapatam a major port thereby enabling the development of the port under the directions of the Central Government. Preliminary operations commenced in the end of the year and were continued vigorously in 1926 with the aid of dredgers and rock-breakers. It is expected that the construction of the harbour will take four or five years. The surrounding hill-sides and adjacent areas will meanwhile be developed for industrial, trading and residential purposes.

Local Self-Government.

As in Bombay, the Madras District Municipalities and Local Boards Acts have been amended in various directions, all of which tend towards liberalisation. Legislation has also been passed permitting the establishment of Village Panchayats, or Committees of Elders. Over 2,500 Panchayats have come into existence in the Presidency. Generally speaking the Local Boards in Madras display a courageous disposition to levy taxes up to the sanctioned maximum. Even then some of them are unable to make both ends meet. Local Bodies in the Presidency have been enabled to levy a tax on entertainments by the Madras Local Authorities Entertainments Tax Act, 6192.

Irrigation.

In March 1925, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounts to £ 4½ millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres; the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which is expected to be completed before 1933 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic feet of water and for a canal nearly 88 miles long with a connected distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate stands at about £ 5½ millions. Another important project is the Periyar project which is intended not only for irrigation purposes but also for providing water power for generating electricity. Taking its rise in the Western Ghats, the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East. Some three thousand feet above sea-level a concrete and masonry dam has been constructed and nearly 50 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,660 million cubic feet. By this work, a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating in its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 142,749 acres, while the supply from the lake was sufficient only for 130,000 acres. To make up for this deficit, Government contemplate increasing the effective capacity of the lake by lowering the water-shed cutting at an estimated cost of Rs. 2½ lakhs. The area already under irrigation in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000

Electric Schemes.

Of the major schemes that have been receiving Government's attention, a hydro-electric undertaking whose details are expected to be announced in the near future, is by far the most important. The protracted negotiations regarding the purchase by the Madras Government of what is known as the Pykara concession, which includes a huge and powerful water-fall have concluded and it has been decided to work the scheme as a government venture. It has indeed been publicly announced that Government do not propose to hand over either this water-fall or any other source of water power to any private syndicate for development. A member of the American Institute of Electrical Engineers with wide experience of big hydro-electric schemes in Canada has been appointed for five years to be in sole charge of the Pykhara Scheme. A proposal to electrify some portions at least of the railways in South India is also under the consideration of the Government.

Madras Hydro-electric Schemes.

The Chief Engineer has recently submitted Government detailed reports on the Pykhara-Hydro-Electric Development including a study from the financial standpoint.

An introductory report on the Papanasam Project has also been received.

Pykhara Project.

The main development differs very little from that described in the introductory report issued a few months ago. The estimates are, however, somewhat lower and the ultimate return on the invested capital more favourable.

Three schemes, *a*, *b* and *c*, have been submitted. The first two assume the electrification of certain sections of the South Indian Railway over a varying period of years, and the transmission of power to Madura, Trichinopoly, and Dindigul in addition to the Coimbatore area and the Nilgiris. The third scheme assumes that the South Indian Railway will decide not to electrify, and contemplates only the transmission of power to the Coimbatore area and the Nilgiris. None of the schemes includes Madras at the outset, but the Chief Engineer is of opinion that within a few years of the inauguration of an extensive hydro-electric-power service, it will have been found economically feasible to extend the transmission line to Madras.

If hydro-electric development is to be undertaken in this part of the Presidency on a scale comparable with the needs of industry and the public in general and, at the same time, operated on a round commercial basis, the revenue derived from the proposed railway load is absolutely necessary to help in covering operation and maintenance expenses during the first few years while the power market is being developed. Without the railway load, development must be along more modest lines and can only include the Coimbatore and Nilgiris area to begin with.

The Chief Engineer has kept the South Indian Railway authorities fully informed of the progress of the investigations and they appear to be generally in favour of a restricted electrification programme.

The Railway Board have, it is understood, referred the electrification plans of their Engineers together with the power proposals of the Madras Government to Messrs. Merz & Partners, Consulting Engineers, and their report is stil awaited. The extent, therefore, of the initial development of hydroelectric power in the areas under review may depend mainly upon the recommendations of Messrs. Merz & Partners to the Railway Board, and, until these are known, it is not possible to decide which of the three schemes is to be developed.

Such drawings and specifications are as common to all the three schemes are being prepared in order that no delay will take place, once the construction of one of the schemes is sanctioned. It should, however, be realized that on a project of such magnitude a considerable amount of labour and detailed work is necessary before the working plans and specifications can be completed.

Only preliminary survey, investigation of foundations, and similar studies have as yet been undertaken at Pykara, but Government have under consideration the question of the immediate construction of certain preparatory works which are common to all the schemes. Once the construction of these works is initiated, it will be possible in about a year to give a light and power service in the Nilgiris from the auxiliary construction plant.

The proposed rates for light and power as estimated by the Chief Engineer are attractive and, after a few years, a reduction can be anticipated. At the same time a satisfactory and increasing return on the capital invested seems reasonably assured.

Distribution.—Government are studying the possiblity of introducing regulations for the distribution and sale of electrical energy,whereby an electric service, at low rates, will be assured to the ultimate consumer and the power market properly developed. Such regulations would be based on those in force in most progressive countries, but modified to suit local conditions.

Pending decision of the Railway Board re: the electrification of the main line sections on the South Indian Railway,the Government have sanctioned the construction of a smaller scheme (The Glen Margen Hydro-Electric Scheme) at a cost of Rs. 12.80 lakhs and work on it is now in progress. Power is expected to be ready for supply from this auxiliary source from about the middle of 1929, and the area to be served will for the present be confined to Ootacamund, Coonoor, Wellington and the neighbouring tea estates.

Papanasam Project.

An introductory report on this development has been prepared by the Chief Engineer and is now being studied by Government. Sufficient information is available to base power costs and formulate tariffs for light and power. Before additional expenditure is incurred on investigations and studies in the field, or on plans and estimates, it is proposed to endeavour to obtain a definite guarantee of a fixed block of power, so that a certain revenue will be available while the potential and promising power market around Tinnevelly, Tuticorin and neighbouring districts is being developed. With this end in view, negotiations are now in progress with certain industrial interests.

Other Projects.

As soon as it is possible, certain other promising hydro-electric projects are to be studied in detail, while those of lesser importance will be carefully investigated and the details filed for future reference. It is the intention of Government in the course of time to prepare plans for a comprehensive electric power generation and

are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the past year at the instance of a nominated member that poor girls reading in any educational institution in the province—Government, local fund, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs. 452 lakhs. The area already under irrigation in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000

Electric Schemes.

Of the major schemes that have been receiving Government's attention, a hydro-electric undertaking whose details are expected to be announced in the near future, is by far the most important. The protracted negotiations regarding the purchase by the Madras Government of what is known as the Pykara concession, which includes a huge and powerful water-fall have concluded and it has been decided to work the scheme as a government venture. It has indeed been publicly announced that Government do not propose to hand over either this water-fall or any other source of water power to any private syndicate for development. A member of the American Institute of Electrical Engineers with wide experience of big hydro-electric schemes in Canada has been appointed for five years to be in sole charge of the Pykhara Scheme. A proposal to electrify some portions at least of the railways in South India is also under the consideration of the Government.

Madras Hydro-electric Schemes.

The Chief Engineer has recently submitted Government detailed reports on the Pykhara-Hydro-Electric Development including a study from the financial standpoint.

An introductory report on the Papanasam Project has also been received.

Pykhara Project.

The main development differs very little from that described in the introductory report issued a few months ago. The estimates are, however, somewhat lower and the ultimate return on the invested capital more favourable.

Three schemes, *a*, *b* and *c*, have been submitted. The first two assume the electrification of certain sections of the South Indian Railway over a varying period of years, and the transmission of power to Madura, Trichinopoly, and Dindigul in addition to the Coimbatore area and the Nilgiris. The third scheme assumes that the South Indian Railway will decide not to electrify, and contemplates only the transmission of power to the Coimbatore area and the Nilgiris. None of the schemes includes Madras at the outset, but the Chief Engineer is of opinion that within a few years of the inauguration of an extensive hydro-electric-power service, it will have been found economically feasible to extend the transmission line to Madras.

If hydro-electric development is to be undertaken in this part of the Presidency on a scale comparable with the needs of industry and the public in general and, at the same time, operated on a round commercial basis, the revenue derived from the proposed railway load is absolutely necessary to help in covering operation and maintenance expenses during the first few years while the power market is being developed. Without the railway load, development must be along more modest lines and can only include the Coimbatore and Nilgiris area to begin with.

The Chief Engineer has kept the South Indian Railway authorities fully informed of the progress of the investigations and they appear to be generally in favour of a restricted electrification programme.

The Railway Board have, it is understood, referred the electrification plans of their Engineers together with the power proposals of the Madras Government to Messrs. Merz & Partners, Consulting Engineers, and their report is stil awaited. The extent, therefore, of the initial development of hydroelectric power in the areas under review may depend mainly upon the recommendations of Messrs. Merz & Partners to the Railway Board, and, until these are known, it is not possible to decide which of the three schemes is to be developed.

Such drawings and specifications are as common to all the three schemes are being prepared in order that no delay will take place, once the construction of one of the schemes is sanctioned. It should, however, be realized that on a project of such magnitude a considerable amount of labour and detailed work is necessary before the working plans and specifications can be completed.

Only preliminary survey, investigation of foundations, and similar studies have as yet been undertaken at Pykara, but Government have under consideration the question of the immediate construction of certain preparatory works which are common to all the schemes. Once the construction of these works is initiated, it will be possible in about a year to give a light and power service in the Nilgiris from the auxiliary construction plant.

The proposed rates for light and power as estimated by the Chief Engineer are attractive and, after a few years, a reduction can be anticipated. At the same time a satisfactory and increasing return on the capital invested seems reasonably assured.

Distribution.—Government are studying the possiblity of introducing regulations for the distribution and sale of electrical energy, whereby an electric service, at low rates, will be assured to the ultimate consumer and the power market properly developed. Such regulations would be based on those in force in most progressive countries, but modified to suit local conditions.

Pending decision of the Railway Board re: the electrification of the main line sections on the South Indian Railway, the Government have sanctioned the construction of a smaller scheme (The Glen Margen Hydro-Electric Scheme) at a cost of Rs. 12.80 lakhs and work on it is now in progress. Power is expected to be ready for supply from this auxiliary source from about the middle of 1929, and the area to be served will for the present be confined to Ootacamund, Coonoor, Wellington and the neighbouring tea estates.

Papanasam Project.

An introductory report on this development has been prepared by the Chief Engineer and is now being studied by Government. Sufficient information is available to base power costs and formulate tariffs for light and power. Before additional expenditure is incurred on investigations and studies in the field, or on plans and estimates, it is proposed to endeavour to obtain a definite guarantee of a fixed block of power, so that a certain revenue will be available while the potential and promising power market around Tinnevelly, Tuticorin and neighbouring districts is being developed. With this end in view, negotiations are now in progress with certain industrial interests.

Other Projects.

As soon as it is possible, certain other promising hydro-electric projects are to be studied in detail, while those of lesser importance will be carefully investigated and the details filed for future reference. It is the intention of Government in the course of time to prepare plans for a comprehensive electric power generation and

transmission system, embracing the whole of the Madras Presidency, which will be gradually developed as funds become available.

The increasing number of electric supply undertakings throughout the Presidency has necessitated the construction of an up-to-date electric testing laboratory for the electrical inspector to Government at a cost of nearly Rs. 80,000.

Co-operation.

The progress made by the Co-operative Department, both in the formation of new societies and the development of those registrerd in previous years has been very satisfactory. There was a very large increase, during the year, in the number of members and in the amount of share capital, of working capital and of reserve fund. The steadily increasing efficiency of many of the local supervising unions gave evidence of the success of the policy adopted by Government of transferring, within statutory limits, the control of primary societies to non-official organisations wherever such a course was practicable. Some noteworthy features of the Co-operative movement during the year were the increased activities of the building societies stimulated by financial help from Government; a marked development in the organisation of labour societies, and an increase in the number of societies formed by cultivators to enable them to hold up their crops for a favourable market and for the joint sale of their produce. The co-operative movement also made satisfactory progress among the depressed classes during the year. A Committee which was appointed to inquire into the progress of the Co-operative movement and suggest in what ways and on what lines the movement may be still further carried on have since submitted their report which is now under the consideration of Government.

Social Legislation.

An advanced piece of social legislation which has caused considerable excitement in the Presidency is the Hindu Religious Endowments Act. It has for its object the better administration and governance of certain Hindu religous endowments. It provides for the appropriation of the surplus funds of the endowments to religious, educational and charitable purposes not inconsistent with the objects of the institutions to which they are attached. The measure entailed a considerable amount of correspondence with the Government of Madras; the Governor of Madras found himself unable to assent to the Bill as originally passed, and returned it for re-consideration, recommending certain amendments which the Council accepted. The Act came into force early in 1925 and has been working satisfactorily notwithstanding the obstacle placed in its way by the orthodox section of the Hindu community. The latter are striving their utmost to put technical and other obstacles in the way of its smooth working and are making much of the suggestion thrown out by the Governor-General while giving his assent to the Bill, namely, that some of its defects might be remedied in the light of experience. Doubts having been raised to the validity of the act It was reenected and passed into lawas Act No. II of 1927. The new Act came into force on 8th February 1927. Another piece of legislation—a non-official Bill—which has raised a heated controversy is the Malabar Tenancy Bill, which aims to confer, subject to certain conditions, occupancy rights on "kanom" tenants and actual cultivators of the soil. As there was a sharp difference of opinion on the very principles of the Bill, the Governor withheld his assent and a committee was appointed to go into the matter thoroughly and its findings have been submitted and the same have been published with a view to receive objections and suggestions. Noteworthy amongst other efforts at legislation for social reform was the non-official resolution passed by the Council recommending to Government to undertake legislation or to ask the Government of India to do so to put a stop to the practice of dedicating young women and girls to Hindu temples for immoral purposes under the pretext of caste, custom or religion. It was also resolved to ask Government to fix as their goal local prohibition of drink in the presidency within 20 years.

Law and Order.

The Superior Court for Civil and Criminal judicial work in the Presidency isthe High Court at Madras, which consists of a Chief Justice and eleven puisne judges. The existing law provides for a maximum of 20 High Court Judges. For the administration of criminal justice there are 26 Session Judges in the Mufassal Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrates, the Subordinate Magistrates and Honorary Magistrates. The administration of civil justice is carried on by 26 District Judges, and 37 Subordinate Judges and 153 District Munsiffs. In the Presidency Town there are a City Civil Court consisting of one Judge and Small Causes Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 71 persons. The Police department is under an Inspector-General who has four deputies in four ranges of the Presidency, a Superintendent being stationed at each District. The sanctioned strength of the permanent police force is about 27,700.

Mr. A. M. Coomara Swami Tanipar, I.C.S., Secretary to Government, Development Department

M. R. Ry. Gnanavaram Pillai, P. J., Negapatam.

The Bengal Presidency.

The Presidency of Bengal, as constituted on the 1st April 1912, comprises the Burdwan and Presidency divisions and the district of Darjeeling, which were formerly administered by the Lieutenant-Governor of Bengal; and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assam. The area of the Presidency is 82,277 square miles, and it possesses a population of 47,592,462 persons; included within this area are the two Indian States of Cooch Behar and Tripura; which are now placed in direct political relations with the Government of India. The Governor of Bengal in Council acts as Agent to the Governor-General of India for these States. The area of the British territory is 76,843 square miles. Bengal comprises the lower valleys and deltas of the Ganges and Brahmaputra, and in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. In the north are the Himalayan mountains and submontane tracts of Darjeeling and Jalpaiguri, and on the south-east the hills in Tripura and Chittagong, while on the west the Chota Nagpur plateau is continued by an undulating tract running through the western portions of Midnapur, Bankura, Burdwan and Birbhum. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People.

Of the inhabitants of the Presidency 25,486,124 or 53·55 per cent. are Mahomedans and 20,809,148 Hindus. These two major religions embrace all, but 2·73 per cent. of the population, Christians, Buddhists and Animists combined, number 1,273,873.

Bengali is spoken by ninety-two per cent. of the population of the Presidency and Hindi and Urdu by 3·8 per cent. The Oriya-speaking people number 298,372 and Nepali is the tongue of 93,060 persons principally residents in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

Industries.

According to the returns of the Census of 1921 nearly 37 millions or over 77 per cent. of the population derive their support from pasture and agriculture, and of these more than 30½ millions are cultivators, and more than 4½ millions farm servants and field labourers. The area under jute in 1927 is estimated at 2,962,100 acres against 3,363,900 in 1926. Bengal is the most important rice-producing area in Northern India, and it is computed that 84 per cent. of the cultivated area of the Presidency is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds, the area devoted to the last named in 1926-27 being 1,097,000 acres. Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1926 was 194,700 acres. There were 370 plantations employing a daily average of 165,179 permanent and 10,343 temporary hands.

Manufacture and Trade.

The main industries in this part of India in addition to the agricultural industry are the jute mill industry, the tea industry (largely an Assam industry) and coal mining. The jute mills in and around Calcutta constitute the principal manufacturing industry of the Presidency. From 1st April to 31st December 1921 all jute mills worked four days per week. From 1st January to 31st March 1923, multiple shift mills worked four days of 13½ hours each per week, single shift mills five days per week, namely four days of 11 hours each and one day of 10 hours. There were 85 mills at work during the year 1924-25 with 49,780 looms and 1,053,821 spindles. The average number of persons employed daily was 3,36,936. The labour supply of mills during the year has been fair, but there have been many days lost through strikes at different mills. The value of the exports of Raw Jute by sea from Calcutta during 1926-27 increased from Rs. 55,90 lakhs to Rs. 78,65 lakhs. Helped by more stable conditions at home and abroad, a steady exchange and good crops, Bengal enjoyed a year of steady trade progress. While the actual volume of the import trade increased by more than 10 per cent. the export side saw record shipments of jute and sustained exports at higher prices of shellac, tea and hides. The United Kingdom is responsible for 36 per cent. of the total trade of Calcutta, the United States 16 per cent., Germany 7 per cent. and Japan 4 per cent. Of the import trade, the United Kingdom improved her share by a point to 57 per cent. the United States and Japan maintened theirs at 7 per cent. and 6 per cent. respectively, but Germany's share dropped below 5 per cent. Exports to the United Kingdom increased nearly 3 points to 24 per cent., exports to the United States dropped a point to 21 per cent. and Germany's takings increased by a point to 8 per cent. Kerosene imports from Burma were down by 24 per cent.; imports from America were the same as last year. The province, however, bought 8,400,000 gallons of kerosene from Russia. Jute exports surpassed all previous records, but as prices ruled lower, the monetary figures actually show a slight decrease. Exports to the United Kingdom showed a marked improvement. Imports of motor cars from the United Kingkom increased by 42 per cent. and from America by 44 per cent. The figures for cotton goods show a rise in the quantity of imports by 11 per cent. and in value by 3 per cent. This rise is mainly due to the healthy conditions of the trade that prevailed towards the end of the last financial year (1926-27). Indian mills took advantage of the cheaper cotton prevailing at the end of the last financial year (1926-27) and put through a substantial amount of profitable business. The low purchasing power of Bengal was attracted to the cheaper class of goods and the Province did large business in the Grey Section of the trade. The tea industry enjoyed another satisfactory season. Calcutta shipments to foreign ports comprised 153 million lbs. consigned direct from gardens and 85 million lbs. of tea marketed in Calcutta as compared with 153 million and 75 million lbs in the previous year. Exports coastwise rose from 5·70 million to 6·44 million lbs. Exports

of tea waste improved from 1·41 millions lbs. to 3.91 million lbs., the United States taking the bulk of the shipments. Coal exports to foreign ports were fairly satisfactory for, though the total was slightly less than last year, the 1926 figures were swelled by exceptional shipments rendered possible by the prolonged strike in the British coal-trade. These were registered under "other countries" and consisted mainly of shipments to the United Kingdom, Aden, and Egypt. The Principal shipments under this head during the current year were 46,000 tons to the Philippines, 26,000 tons to Hong-Kong and 13,000 tons to Sumatra.

In 1926-27 the foreign sea-borne trade of Bengal (excluding treasure but including Government stores) amounted to Rs. 259 crores of which 89 crores represented imports and Rs. 126 crores exports. Of the total foreign trade of Bengal, over 90 per cent. was the share of Calcutta. The six chief exports from Bengal are in order of importance; jute (raw and manufactured), tea, lac, hides and skins (raw seeds, grain, pulse and flour) and the six leading imports are cotton goods, metals and ores, sugar, machinery and millwork, railway plant and rolling stock, and oils.

Administration.

The present form of administration in Bengal dates from January 1921. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council, who are in charge of the "reserved subjects," and three Ministers, who are in charge of the "transferred subjects," but in 1924, owing to political reasons, there were only two ministers, and these had to resign owing to the refusal of the Legislative Council to vote their salaries. On their resignation, the transferred subjects were carried on by the members of the Executive Council. Two ministers were appointed by H. E. the Governor in March 1925 for the administration of the transferred subjects, but owing to the refusal of the Legislative Council to vote their salaries they resigned their offices in the same month. The administration of transferred subjects was thereupon assumed by H. E. the Governor of Bengal and subsequently the Secretary of State ordered the suspension of transfer of all transferred subjects in Bengal until the 21st January 1927. In the course of 1927, two Ministers were again appointed. This time the salaries were voted by a small majority and since then the administration has been carried on as originally intended.

Bengal is administered by five Commissioners, the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the ingathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

Justice.

The administration of Justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 16 Puisne judges including two additional judges who are Barristers, Civilians or Vakils. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsiffs. Of these officers, the District and Additional Judges and a certain number of subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side, the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has five Presidency Magistrates including a Temporary Magistrate, two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government.

By Bengal Act III of 1884 which regulates municipal bodies in the interior and its subsequent amendments the powers of Commissioners of municipalities have been increased and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of Health Officers and Sanitary Inspectors and the training and employment of female medical practitioners. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings. The municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaced Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and Deputy Executive Officers, all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government. The total number of councillors is 85, with 5 aldermen, elected by the councillors. Ten of the councillors are nominated by Government, and by the general or special constituencies. There are separate constituencies for Mahommedans.

In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers, with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1919 introduced the new system of self-government by a creation of village authorities vested with the power and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the Union Board, replaces, the old Chaukidari *panchayats* and the Union Committee and deal with the village police, village roads, water supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the Union Boards Village Benches and Courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all Districts in the Presidency except Darjeeling, and in 1927 over 4,000 Union Boards were sanctioned, of which nearly 3,500 were actually constituted.

Public Works.

The Public Works Department consists of P. W. and Railway Departments and is under the charge of Secretary to Government in the Department of Agriculture and Industries.

The P. W. D. deals with questions regarding the construction of public buildings and roads.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal professional adviser of Government.

Irrigation.

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Marine.

The Marine Department deals with all questions connected with the Bengal Pilot Service, merchant shipping, the administration of the ports, of Calcutta and inland navigation.

Police.

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General, for the Dacca Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in charge of the C. I. D. and the Intelligence Branch. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Sardah, in the district of Rajshahi where newly appointed gazetted officers, and constables of the Bengal police learn their duties. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 190 lakhs.

Medical.

The head of the Medical Department is the Surgeon-General with the Government of Bengal, and Sanitation is in charge of the Director of Public Health, the former appointment is always held by a member of the Indian Medical Service, while the latter post is not so reserved. There is also a Chief Engineer, Public Health Department, Bengal. In the districts the Civil Surgeons are responsible for medical work. There are 40 hospitals and dispensaries in Calcutta, 10 of which are supported by the Government and 6,38,233 persons were treated at these institutions of whom 51,253 were inpatients. In the mofussil districts there are 1,088 hospitals and dispensaries; the number of patients treated in them as well as in several huts, fairs, melas, subsidised and temporary dispensaries and in various medical centres was 80,47, 802. This includes 76,378 in-patients.

Education.

In the Presidency of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains four Arts Colleges in Calcutta (of which one is a college for women, one is for Mahomedans and one the Sanskrit College), one at Hughli, one at Krishnagart, three, including the Islamia Inter Colleges, at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English, and 5 normal schools, one in each division, for the training of teachers in secondary schools through the medium of the vernacular; also an engineering college at Sibpur and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school in Calcutta, and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore, and also at certain other mofussil centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are

four Government high schools for boys, two of which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh, and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above, 85 institutions called Guru Training Schools are maintained by the Department for the training of primary school teachers. For the education of Mahomedans, there are senior madrasas at Calcutta, Dacca, Chittagong and Hughli, and one junior madrasa at Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. All institutions for technical and industrial education (except B. E. College, the Ahsanullah School of Engineering, Dacca, the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Burdwan, a high school at Santipur and a high school at Chittagong.

In 1926-27 there were in the Presidency :—

RECOGNISED INSTITUTIONS FOR MALES.

	Institutions.	Scholars.
Universities	2	1,714
Arts Colleges	41	22,131
Professional Colleges ..	14	6,281

Special Schools	49	1,756

UNRECOGNISED SCHOOLS.

Males	1,318	46,035
Females	292	7,469

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director, an Addl. Asstt. Director appointed temporarily, and an Assistant Director for Muhammadan Education. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors and Assistant Inspectors for Mahommedan Education according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the Universities of Calcutta and Dacca established in 1857 and 1921, respectively, administered by the Chancellor (the Governor of Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called the University Law College, Calcutta. Dacca University also has a Law Department attached to it. Calcutta University is mainly an examining body, but it has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated colleges.

The percentage of scholars to the total population :—

	Recognised Schools.	All Schools.
Males	7·75	7·94
Females	1·84	1·88
Total ..	4·90	5·02

The University at Dacca is of the residential type. There is a Board for Secondary and Intermediate Education at Dacca. It conducts the Matriculation and Intermediate Examinations for the students of institutions at Dacca and also the Islamic Matriculation and Intermediate Examinations.

The education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys, a school for girls (both residential) at Kurseong, and attached to the latter a Training College (for women only).

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmoor, and Jubbal, and by the Punjab. Their total area amounts to 106,295 square miles, to which may be added the area of the two Indian States of Tehri and Rampur, both of which lie within the United Provinces, 5,392 square miles and the newly-created State of Benares with an area of 875 square miles, giving a total of 112,562 square miles. The total population is 46,510,668.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country: portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract; the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west, to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Provinces in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganges, Jumna, and Gogra.

The People.

The population is mainly Hindu, 85 per cent. ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being a little over 1 per cent. composed of Christians (Europeans and Indians) Jains, Aryas and Sikhs. The Aryas are the followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the Western districts of the Provinces. Most of the people, however, show a mixed Arya-Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Bihari; Urdu, or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca.*

Industries.

The principal industry is agriculture, which supports no less than 75 per cent. of the population. The soils of the Provinces fall into three groups; the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium; the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zemindari tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 54 per cent. of the total area in Oudh.

Manufactures.

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan districts, and there were mines of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Limestone is found in the Himalayas and in the Meerut district, and stone is largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the provinces, as a home industry; an
weaving, by means of hand-looms, is carried
in most districts. According to the census
1921, 100,993 persons were dependent
cotton ginning, cleaning and pressing,
820,069 on spinning and weaving. The la
industry is in the Azamgarh district,
there are 8,585 looms. Silk spinning is co

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmoor, and Jubbal, and by the Punjab. Their total area amounts to 106,295 square miles, to which may be added the area of the two Indian States of Tehri and Rampur, both of which lie within the United Provinces, 5,392 square miles and the newly-created State of Benares with an area of 875 square miles, giving a total of 112,562 square miles. The total population is 46,510,668.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country: portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract; the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west, to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Provinces in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganges, Jumna, and Gogra.

The People.

The population is mainly Hindu, 85 per cent. ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being a little over 1 per cent. composed of Christians (Europeans and Indians) Jains, Aryas and Sikhs. The Aryas are the followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the Western districts of the Provinces. Most of the people, however, show a mixed Arya-Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Bihari; Urdu, or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries.

The principal industry is agriculture, which supports no less than 75 per cent. of the population. The soils of the Provinces fall into three groups; the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium; the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zemindari tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 54 per cent. of the total area in Oudh.

Manufactures.

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan districts, and there were mines of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Limestone is found in the Himalayas and in the Meerut district, and stone is largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the provinces, as a home industry; and weaving, by means of hand-looms, is carried on in most districts. According to the census of 1921, 100,993 persons were dependent on cotton ginning, cleaning and pressing, and 820,069 on spinning and weaving. The largest industry is in the Azamgarh district, where there are 8,585 looms. Silk spinning is confined almost entirely to the district of Benares; where the famous *kimkhab* brocade is made. Embroidery is manufactured in Lucknow, where the noted *chikan* work of silk on cotton or muslin is produced, and in Benares, where gold and

silver work on velvet, silk, crepe and sarsenet obtains. The glass industry is important in some districts. Benares and Moradabad are noted for their lacquered brass work, Farrukhabad for its calico prints and Agra for its carpets and marble and alabaster articles; porcelain is manufactured in Ghazipur, and other industries are those of paper-making (Lucknow) dyeing, leather and fireworks. The chief centre of European and Indian industry is Cawnpore, which, situated in the most advantageous position on the Ganges, possesses tanneries, cotton, woollen and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly; Mirzapur (which produces also excellent carpets), Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly, at Allahabad there are stone works, at Rosa there is a large English distillery, with patent still.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and three Ministers from Jan. 12, 1926, in charge of the Transferred Subjects. The medium for the transaction of public business is the Secretariat, the Staff of which consists of 7 Secretaries and 4 Deputy Secretaries. The Director of Public Instruction is also *ex-Officio* Deputy Secretary in the Education Department. The Chief Secretary is in charge of Appointment, General Administration, Executive, Political. Newspaper and Police Departments; the Finance Secretary deals mainly with the Finance Department: the Revenue Secretary is in charge of the Revenue, and Forest Departments and Public Works Department, (Buildings and Road); the Education Secretary looks to the Education, Industries, Agriculture and Excise Departments; the L. S. G. Secretary to the local Self-Government, Municipal, Medical and Public Health Departments and the Judicial Secretary is in charge of the Judicial and Legislative Departments. The seventh Secretary belongs to the Public Works Department, (Irrigation Branch) and is also Chief Engineers for the Irrigation Branch of the P.W.D. Government spends the cold weather, October to April, in Lucknow and Allahabad, mostly in Lucknow, though the Secretariat remains throughout the year at Allahabad. The Governor and the Secretaries spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases, and it has important executive duties, being the chief revenue authority in the province. There are forty-eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,000 square miles and average population a million. Each district is in charge of a District Officer, termed a Collector and Magistrate in Agra and a Deputy Commissioner in Oudh and Kumaon. The districts are grouped together in divisions under a Commissioner. There are ten divisions, having an average area of nearly 12,000 square miles and a population of from 5 to 6 millions. The districts are sub-divided into *tahsils*, with an average area of 500 square miles and a population of 220,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *naib tahsildars* and *kanungos*. Ordinarily there are three *kanungos* and one *naib tahsildar* to a *tahsil*. The *Kanungos* supervise the work of the *patwaris*, or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal), the District Officer assigns a sub-division, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted civilians (Joint and Assistant Magistrates and Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates). The Commissioner of the Rohilkhand and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice.

Justice is administered by the High Court of Judicature at Allahabad in the province of Agra and by the Chief Court in Oudh sitting at Lucknow which are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and eight permanent and two temporary puisne judges, five of whom are Indians, and the latter consists of a Chief Judge and four judges three of whom are Indians. There are thirty-one posts (twenty-four in Agra and seven in Oudh) of district and sessions judges of which eight are held by Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate jurisdiction in rent cases. District Officers and their assistants including tahsildars, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Kumaun has been brought under the Civil jurisdiction of the High Court from 1-4-26. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the provinces there are subordinate judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs. 2,000, and if specially empowered up to Rs. 5,000; In Oudh the ordinary jurisdic-

silver work on velvet, silk, crepe and sarsenet obtains. The glass industry is important in some districts. Benares and Moradabad are noted for their lacquered brass work, Farrukhabad for its calico prints and Agra for its carpets and marble and alabaster articles ; porcelain is manufactured in Ghazipur, and other industries are those of paper-making (Lucknow) dyeing, leather and fireworks. The chief centre of European and Indian industry is Cawnpore, which, situated in the most advantageous position on the Ganges, possesses tanneries, cotton, woollen and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly; Mirzapur (which produces also excellent carpets), Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly, at Allahabad there are stone works, at Rosa there is a large English distillery, with patent still.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and three Ministers from Jan. 12, 1926, in charge of the Transferred Subjects. The Commissioner of the Rohilkhand and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice.

Justice is administered by the High Court of Judicature at Allahabad in the province of Agra and by the Chief Court in Oudh sitting at Lucknow which are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and eight permanent and two temporary puisne judges, five of whom are Indians, and the latter consists of a Chief Judge and four judges three of whom are Indians. There are thirty-one posts (twenty-four in Agra and seven in Oudh) of district and sessions judges of which eight are held by Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate jurisdiction in rent cases. District Officers and their assistants including tahsildars, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Kumaun has been brought under the Civil jurisdiction of the High Court from 1-4-26. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the provinces there are subordinate judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs. 2,000, and if specially empowered up to Rs. 5,000; In Oudh the ordinary jurisdic-

tion of a subordinate judge extends to suits valu-
ing not more than Rs. 20,000 and the ordinary
jurisdiction of a munsif to suits of Rs. 2,000
value, provided that in special cases the limit
of pecuniary jurisdiction can be removed alto-
gether in the case of a subordinate judge and
that of the munsif raised up to Rs. 5,000.
Appeals from munsif always lie to the district
judge while those from the subordinate judges
go to the High Court or the Chief Court except
in cases of a value of Rs. 5,000 or less which are
heard by the district judge. Small cause court
judges try suits to the value of Rs. 500. There
are also honorary munsifs limited to Rs. 200
suits, and village munsifs whose jurisdiction is
fixed at Rs. 20.

Local Self-Government.

The units of local self-government are the
district and municipal boards which, with the
exception of six municipal boards, have non-
official Chairman. The largest municipal boards
have executive officers to whom certain admini-
strative powers are reserved. The administrative
functions of the majority of the municipal boards
and of all district boards are performed by the
chairman and the secretary, but the boards
themselves are directly responsible for most of
the administration. The district boards obtain
45% of their income from Government grants.
The other chief source of income is the local
rate levied from the landowers. The chief source
of municipal income is the octroi or terminal tax
and toll which is an octroi in modified form. Local
opinion is strongly in favour of indirect as opposed
to direct taxation for municipal purposes

Public Works.

The Public Works Department is divided
into the Buildings and Roads branch and the
Irrigation branch. The Buildings and Roads
branch is administered by a Civilian Secretary
who has a Chief Engineer under him and the
Irrigation branch by two Chief Engineers who are
also Secretaries to Government. The Province
is divided into circles and divisions both for
buildings and roads and for irrigation purposes.
Each circle is in charge of a Superintending Engi-
neer, or a Deputy Chief Engineer and each
division is in charge of an Executive Engineer.
The whole of the irrigation works constructed
or maintained by Government are in charge of
the Irrigation branch. All metal roads main-
tained from Provincial funds and construction
of all buildings costing more than Rs. 20,000 are
in charge of the Buildings and Roads branch.
In the Irrigation branch there is a separate
Chief Engineer with a full staff for the construc-
tion of the Sarda Canal, a work of the first
magnitude which when completed will introduce
irrigation into most of the districts of Oudh.

Police

The Police Force is divided into District
and Railway Police and is administered
by an Inspector-General, with four Deputies and
two Assistants, forty-six District Superinten-
dents, three Railway Superintendents, fifty-
one Assistant Superintendents and fifty
Deputy Superintendents. There is a Police
Training School at Moradabad. There is a
local C. I. D forming a separate detective de-
partment, under a Deputy Inspector-General,
with three assistants. The armed police are
armed with the ·476 musket and in certain dis-
tricts to some extent also with the Martini-
Henry rifle. The administration of the Jail
Department is in charge of an Inspector-General
of Prisons, who is a member of the Indian
Medical Service

Education.

Education is maintained in part by the State
and partly by means of grants-in-aid. There
are five universities, the four residential univer-
sities of Allahabad, Lucknow, Aligarh (Muslim)
and Benares (Hindu) and the affiliating Univer-
sity of Agra. The last named was established
in 1927 and consists of the eight colleges, for-
merly associated with Allahabad University on
its external side, *viz.*, the Agra and St. John's
Colleges at Agra, the Christ Church, D.A.V., and
Sanatan Dharam Colleges at Cawnpore, the Meerut
College, Meerut, the Bareilly College, Bareilly and
St. Andrew's College, Gorakhpur. There are a
number of Intermediate Colleges which prepare
boys for the high school and intermediate
examinations conducted by the Board of High
School and Intermediate Education, which
controls high school and intermediate edu-
cation. The Isabella Thoburn College at
Lucknow and the Crosthwaite Girls' College
at Allahabad impart university education to
Indian girls and the Theosophical National
Girls' School and Women's College at Benares
teach up to the intermediate stage. The St.
George's Intermediate College, Mussoorie, the
Philander-Smith College, Naini Tal, the St.
Joseph's College, Naini Tal, the Martiniere College,
Lucknow and the Boys' Intermediate College,
Allahabad, are a few of the well known institu-
tions for European and Anglo-Indian children
in the province; besides these, there are many
excellent private educational institutions for
European boys and girls both in the hills and
plains which are attended by students from all
over India. Government maintain Training
Colleges for teachers in Lucknow, Allahabad
and Agra, and there are training departments
attached to the Aligarh Muslim University and
the Benares Hindu University. There is a Go-
vernment Engineering College at Roorkee (Thoma-
son College), a School of Art and Crafts in Luck-
now and an Agricultural College, and a Techno-
logical Institute at Cawnpore; there is also a non-
Government Agricultural Institute at Naini,
Allahabad. Education in law is given at the
four residential universities and at the Agra
and Meerut colleges. Instruction in commerce
for the B. Com. degree of the Agra University
is given in the Sanatan Dharam College, Cawn-
pore. The King George's Medical College,
Lucknow, now merged in the Lucknow Univer-
sity, prepares candidates for the M.B.B.S. degree
of the Lucknow University. Besides this there
are two medical schools at Agra for males and
females. Public schools for secondary and
primary vernacular education are almost entirely
maintained or aided by district and municipal
boards and vernacular education is almost
entirely in their hands.

Medical.

The Medical Department is in charge of
an Inspector-General of Civil Hospitals.
A Civil Surgeon is in charge and is
responsible for the medical work of each dis-
trict, and in a few of the larger stations he has
an assistant. In two stations (Ranikhet and
Roorkee) Medical Officers in military employ

hold collateral civil charge. There are eighty-three Provincial Medical service officers in charge of important dispensaries and a large number of Indian Provincial subordinate medical service officers. Lady doctors and women sub-assistant surgeons visit *purdanashin* women in their own homes and much good work is done in this manner. Maternity and Child Welfare Centres have been opened in almost all the districts of the province.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital which has a Pathological Laboratory attached to it and the Balrampur Hospital at Lucknow. King Edward VII Hospital, Benares, the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style) and Saint Mary's Cottage Hospital, Mussoorie. The Ramsay Hospital for Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals. King George's Medical College, Lucknow, is one of the best equipped Colleges in the country, with a staff of highly efficient professors, and the hospital attached to it is the first in the Province. There are also male and female medical schools at Agra. There is an X-Ray Institute at Dehra Dun, where valuable research work has been carried out, and there are sanatoria for British soldiers in the hills. The King Edward VII Sanatorium at Bhowali in the district of Naini Tal is an up-to-date and well equipped institution for the treatment of European and Indian consumptives. In addition five centres for the treatment of tubercular patients have been established at Agra, Allahabad, Benares, Cawnpore and Lucknow. There are mental Hospitals for Indian non-criminal lunatics at Agra and Bareilly and for criminal lunatics at Benares.

THE FINANCES OF THE UNITED PROVINCES.

As explained in the chapters on the new constitution of India, under the Reform Act of 1919, the financial position of the Provinces underwent a remarkable change. The Provinces are, for all practical purposes, financially independent of the Government of India. The contribution payable by the Local Government has been remitted entirely by the Government of India with effect from the year 1928-29. As the finances of the Provinces thus become of greater importance, the position is set out in some detail in the following pages:—

ESTIMATED REVENUE FOR 1928-29.

	Rs.
Principal Heads of Revenue.	
Taxes on Income	....
Land Revenue	6,86,61,637
Excise	1,35,77,200
Stamps	1,73,80,000
Forests	57,78,015
Registration	13,50,000
Scheduled Taxes	....
Total	10,67,46,852
Railways.	
Subsidised Companies	1,75,000
Irrigation.	
Works for which capital accounts are kept—	
(1) Productive Works— Net receipts	1,01,13,544
(2) Un-productive Works— Net receipts	—3,60,505
Total, net receipts	97,52,939
Works for which no capital accounts are kept	21,000
Total Irrigation	97,73,939
Debt Services.	
Interest	9,90,000
Total	9,90,000
Civil Administration.	
Administration of Justice	15,01,200
Jails and Convict Settlements	8,07,400
Police	2,58,800
Education	10,73,500
Medical	2,91,500
Public Health	2,45,688
Agriculture	5,76,062
Industries	49,870
Miscellaneous Departments	67,280
Total	48,71,300
Buildings, Roads and Miscellaneous Public Improvements— Civil Works	4,03,407
	4,03,407

hold collateral civil charge. There are eighty-three Provincial Medical service officers in charge of important dispensaries and a large number of Indian Provincial subordinate medical service officers. Lady doctors and women sub-assistant surgeons visit *purdanashin* women in their own homes and much good work is done in this manner. Maternity and Child Welfare Centres have been opened in almost all the districts of the province.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital which has a Pathological Laboratory attached to it and the Balrampur Hospital at Lucknow. King Edward VII Hospital, Benares, the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style) and Saint Mary's Cottage Hospital, Mussoorie. The Ramsay Hospital for Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals. King George's Medical College, Lucknow, is one of the best equipped Colleges in the country, with a staff of highly efficient professors, and the hospital attached to it is the first in the Province. There are also male and female medical schools at Agra. There are mental Hospitals for Indian non-criminal lunatics at Agra and Bareilly and for criminal lunatics at Benares.

THE FINANCES OF THE UNITED PROVINCES.

As explained in the chapters on the new constitution of India, under the Reform Act of 1919, the financial position of the Provinces underwent a remarkable change. The Provinces are, for all practical purposes, financially independent of the Government of India. The contribution payable by the Local Government has been remitted entirely by the Government of India with effect from the year 1928-29. As the finances of the Provinces thus become of greater importance, the position is set out in some detail in the following pages:—

ESTIMATED REVENUE FOR 1928-29.

Principal Heads of Revenue.	Rs.
Taxes on Income	....
Land Revenue	6,86,61,637
Excise	1,35,77,200
Stamps	1,73,80,000
Forests	57,78,015
Registration	13,50,000
Scheduled Taxes	....
Total	10,67,46,852
Railways.	
Subsidised Companies	1,75,000
Irrigation.	
Works for which capital accounts are kept—	
(1) Productive Works— Net receipts	1,01,13,544
(2) Un-productive Works— Net receipts	—3,60,505
Total, net receipts	97,52,939
Works for which no capital accounts are kept	21,000

Aligarh, Muttra and Agra district (Muhammadan Rural).	Maulvi Obaidur Rahman Khan.
Mainpuri, Etah and Farrukhabad districts (Muhammadan Rural).	Shaikh Abdulla.
Etawah, Cawnpore and Fatehpur districts (Muhammadan Rural).	Khan Bahadur Hafiz Hidayat Husain, B.A., Bar-at-Law.
Jhansi division (Muhammadan Rural)	Maulvi Saiyid Habib Ullah.
Allahabad, Janupur and Mirzapur districts (Muhammadan Bural).	Hon'ble Nawab Muhammad Yusuf.
Benares, Ghazupur, Ballia and Azamagarh districts (Muhammadan Rural).	Khan Bahadur Shah Badre Alam.

The Punjab.

The Punjab or land of the five rivers, is so called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Indian State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,330 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 trans-frontier Baluchis) that is to say, about one-thirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls respectively. The total population of the Province in 1921, including the Baloch tribes on the border of the Dehra Ghazi Khan District was 25,101,060 of whom 4,416,036 were in the Indian States.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in characteristics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost wholly agricultural and pastoral but it includes one large town in Sialkot. Of the plains of the Punjab, the eastern portion covers an area of some 36,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south-is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their security against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States.

The Indian States of the Punjab were formerly in the Political charge of the Punjab Government. In 1921, however, the thirteen most important States, including Patiala, Bahawalpur, Jind and Nabha, were formed into a separate "Punjab States Agency" under the control of the Agent to the Governor-General, Punjab States. The only States remaining in the charge of the Punjab Government, are the Simla Hill States, for which the Deputy Commissioner of Simla is Political Officer, and three small States in the Ambala Division, Kalsia, Pataudi and Dujana, which are supervised by the Commissioner of Ambala.

The People.

Of the population roughly one-half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one half the Jats are Mahomedan, one-third Sikh and one-sixth Hindu. In distribution they are ubiquitous and are equally divided over the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion; about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the man power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found

in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Sayads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias) and trading castes of the Mahomedans (Khojas, Parachas and Khakhas), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages.

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani, Urdu (the polished language of the towns) and other Hindi; Western Pahari, which is spoken in the hill tracts; and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small proportions of the population.

Agriculture.

Agriculture is the staple industry of the province, affording the main means of subsistence to 60·5 per cent. of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners. But a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates 2,000,000 acres of what was formerly waste land, the Lower Jhelum Canal, 440,000 acres, and the Lower Bari Doab Canal, adds 10,30,000 acres to this total. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 5,700 square miles. Of the crops grown, wheat is the most important and the development of irrigation has led to a great expansion of the wheat area. Next in importance to wheat is gram. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. Cotton is grown generally throughout the province. On the Canal irrigated areas the Cotton grown is chiefly American but elsewhere it is the short stapled variety, known as 'Bengals.' The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in its live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in the south west in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries.

The mineral wealth of the Punjab is small rock salt, saltpetre and limestone for road building being the most important products. There are some small coal mines in the Jhelum, Shahpur and Mianwali districts with an output of about 75,000 tons a year, and gold washing is carried on in most of the rivers not without remunerative results. Iron and copper ores are plentiful but difficulties of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing country, the total number of factories being only 590 the majority of which are cotton ginning and pressing factories. Cotton weaving as a domestic industry is carried on by means of hand looms in nearly every village. The Government Central Weaving Institute, Amritsar, and the Weaving Classes attached to the Government Industrial Schools at Multan, Sialkot, Hoshiarpur, Gujrat, Rohtak and Kulu, have shown considerable enterprise in improving the hand-weaving industry. The Government Demonstration Weaving Factory at Shahdara, (Lahore), which is expected to start operations very shortly, will assist considerably in the development of the power-loom weaving industry of the Province. The Government Hosiery Institute at Ludhiana and the Institute of Dyeing and Calico Printing at Shahdara, (Lahore), are doing useful work in the development of the hosiery and dyeing and calico printing industries respectively. Blankets and woollen rugs are also produced in considerable quantities and the carpets of Amritsar are famous. Silk weaving is also carried on and the workers in Gold, Silver, Brass, Copper and Earthenware are fairly numerous. Ivory carving is carried on extensively at Amritsar and Muzaffargarh as well as in the Patiala State. Mineral Oil is being extracted and refined in the Attock and Rawalpindi Districts respectively and a cement factory is established at Wah near Hassanabdal.

Administration.

Prior to the Amendment of the Government of India Act in 1919 the system of administration was that of a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the Amended Act the Province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in Council being in charge of the Reserved Subjects and the Governor with his Mini ters of the Transferred Subjects. The general system of provincial administration under this scheme is sketched in the section Provincial Governments (*q. v.*) where is also given a list of the Reserved and Transferred Subjects. Associated with the Governor and the Council and Ministers is an enlarged Legislative Council, with wide powers, whose scope and authority are given under the Legislative Councils (*q.v.*), the system being common to all the major Provinces. The business of Government is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance and (4) Revenue Secretary and Secretary, Transferred Departments, one Deputy Secretary, three UnderSecretaries and two Assistant Secretaries. In the Public Works

Department, there are also three Secretaries, (Chief Engineers), one in the Buildings and Roads branch and two in the Irrigation Branch while the Legal Remembrancer is also Secretary to Government in the Legislative Department. The heads of the Police and Educational Departments are also Under-Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by five Commissioners (for Ambala, Jullunder, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards), the three Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Directors of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer.

Justice.

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and seven pusine judges (either Civilians or barristers), and three additional judges. Subordinate to the High Court are the District and Sessions Judges (22 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentence up to seven years' imprisonment.

Local Self-Government.

Local Self-Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district; of Municipal, Small Town, and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees, and those of Municipal, Small Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Panchayat system is an attempt to revive the traditional village community organisation, the elected committee or Panchayat possessing certain powers in respect of taxation, local option, civil and criminal justice, the abatement of nuisances and other matters. Most of the Members of practically all local bodies are now elected and elections are usually keenly contested.

Police.

The Police force is divided into District and Railway Police. The combined force is under the control of the Inspector-General, who is a member of the Gazetted force and has under him three Deputy Inspector-Generals and a fourth Deputy Inspector-General in charge of the Criminal Investigation Department and of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education.

The strides which have been made in the past decennium, especially in the concluding years of the period, have brought the Punjab into line with the older and more forward provinces. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains twelve art colleges, (including one for Europeans and another for women), two training colleges, one for Indians at Lahore and another for Europeans at Ghoragali, Six separate normal schools and thirty-nine training classes for teachers of both sexes, ninety-three secondary schools for boys and girls, a reformatory school and fifty-two centres for vocational training. Apart from these Institutions for general education, Government maintains nine higher grade professional institutions, *viz.*, the medical and veterinary colleges and the arts and technical schools at Lahore, the medical school at Amritsar, the Agricultural College at Lyallpur, the Engineering College at Mughalpura and school at Rasul, and the Institute of Dyeing and Calico printing. In addition a hosiery institute has been established at Ludhiana and a central weaving Institute at Amritsar; while there are twenty industrial schools (one for disabled soldiers included) scattered over the province.

The Department of Education is in the charge of the Minister for Education who is assisted in the work of administration by the Director of Public Instruction. The Punjab University controls higher education.

Forests.

Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 8,700 square miles.

Medical.

The Medical Department is controlled by the Inspector-General of Civil Hospitals who is at present an officer of the Indian Medical Service holding the rank of Colonel. He is assisted by an Officer designated the Deputy

Inspector-General of Civil Hospitals, who is at present an officer of the Indian Medical Service holding the rank of Lieutenant-Colonel. The Department of Public Health is controlled by the Director of Public Health (also a member of the Indian Medical Service) who for the present has under him five Assistant Directors of Public Health, 37 District Medical Officers of Health, (including three Assistant Epidemiologists), twenty-eight Sanitary Inspectors and twenty-eight Dispensaries of the normal staff, in addition to a Special Staff engaged as required for combating epidemic deseases. The Superintending Engineer, Public Health Circle, is the Technical Adviser of the Department in Engineering matters and this officer and the Director of Public Health are the technical advisers of the Urban Sanitary Board which deals with major sanitary problems—water supply and drainage—affecting Municipal and other Towns.

Burma.

The Province of Burma lies between Assam on the North-West and China on the North-East and between the Bay of Bengal on the West and South-West and Siam on the South-East. Its area is approximately 263,000 square miles, of which 184,000 are under direct British Administration, 16,000 are unadministered and 63,000 belong to semi-independent Native States. The main geographical feature of the country is the series of rivers and hills running fan-like from North to South with fertile valleys in between, widening and flattening out as they approach the Delta. Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenasserim have a rainfall of about 200 inches, the Delta less than half that amount. The hot season is short and the monsoon breaks early. The maximum shade temperature is about 96°, the minimum about 60°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a "rain shadow" and has a climate resembling that of Bihar. The maximum temperature is twenty degrees higher than in the wet zone, but this is compensated by a bracing cold season. To the north and east of the dry zone lie the Kchin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate climate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers, the number of hilly ranges (Yomas) and the abundance of forests, all combine to make the scenery of Burma exceedingly varied and picturesque.

The People.

The total population of Burma at the census of 1921 was 13,169,099. There were 8,382,335 Burmans, 1,017,987 Shans, 1,220,356 Karens, 1·845 Kachins, 288,847 Chins, 300,700 Arakanese, 323,509 Talaings and 122,257 Taungyos. There is also a large alien population of 149,060 Chinese and 887,877 Indians. while the European and Anglo-Indian population numbered 25,005, and Indo-Burmans, 12,71.

The Burmans, who form the bulk of the population, belong to the Tibetan group and their language to the Tibeto-Chinese family. They are essentially an agricultural people, 80 per cent of the agriculture of the country being in their hands. The Burmese, and most of the hill tribes also, profess Buddhism, but Animism or the worship of nature spirits, is almost universal. The interest taken by the Burmese in the course of the war, their response to the call for recruits and their generous contributions to war loans and charitable funds seem to show that their apathy towards the government of the country is giving way to an intelligent loyalty to British rule.

In appearance the Burman is usually somewhat short and thick set with Mongolian features. His dress is most distinctive and exceedingly comfortable. It consists of a silk handkerchief bound round his forehead, a loose jacket on his body and a long skirt or longyi tied round his waist, reaching to his ankles. The Burmese women, perhaps the most pleasing type of womanhood in the East, lead a free and open life, playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the men's minus the silk kerchief on the head, and the longyi is tucked in at the side instead of being tied in front. A well dressed and well groomed Burmese lady would, for grace and neatness, challenge comparison with any woman in the world.

Communications.

The Irrawaddy, and to a less extent the Chindwin, afford great natural thoroughfares to the country. At all seasons of the year these rivers, especially the Irrawaddy, are full of sailing and steam craft. In the Delta the net-work of waterways is indeed practically the only means of communication. The Irrawaddy Flotilla Company, with a fine fleet of mail, cargo and ferry boats, gives the Irrawaddy and the Delta rivers and creeks a splendid river service.

The Burma Railways Company has a length of 1908, 46 miles open line. The principal lines are from Rangoon to Mandalay; from Sagaing to Myitkyina, the most northern point in the system; the Rangoon-Prome line; and the Pegu-Martaban line, which serves Moulmein on the further bank of the Salween River.

Industry.

Agriculture is the chief industry of the province and supports nearly three-fourths of the population. The nett total cropped area is 16½ million acres of which nearly ¾ million acres are cropped more than once. Irrigation works supply water to nearly 1 million acres. India is very largely dependent on Burma for her supplies of kerosene, benzine and petrol which rank second to rice in order of importance. Teak wood is exported in large quantities from Burma to India.

Forests play an important part in the industrial life of the Province. The forest reserves cover some 32,128 square miles, while unclassed forests are estimated at about 115,346 square miles. Government extracts some 50,366 tons of teak annually, private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief extract over 440,648 tons. Other timber extracted by licensees amounts to over 589,139 tons and firewood over 1,128,964 tons.

Tin and wolfram are found chiefly in the Tavoy and Mergui Districts. Wolfram and tin are found together in most mining areas in Tavoy, the proportion varying from almost pure tin to almost pure wolfram. The rise in the price of tin has revived the tin mining industry in the Tavoy and Mergui Districts.

Owing to a depression in the market, most of the wolfram mines have closed down. Silver, lead and zinc ore are extracted by the Burma Corporation at Bawdwin in the Northern Shan States. Copper in small quantities is also found there. There are small deposits of Molybdenite in Tavoy and Mergui and of

platinum in Myitkyina. The output of precious stones from the ruby mines has declined. Gold dredging in the Myitkyina District has proved unprofitable and the company has been wound up. From the mines in the Hukong valley jade and amber are won. The oldest and largest oil field in the province is at Yenangyaing in Magwe district where the Burma Oil Company has its chief wells. But borings in other districts have shown that the oil-bearing strata extend over a large part of the dry zone, and the output from the smaller fields in Pakokku and Minbu districts is now considerable, while the wells sunk in Thayetmyo district are also showing satisfactory returns. Two-thirds of the total production comes from the Yenangyaung and Singu fields. The Burma Oil Company take their oil to the refineries at Rangoon by pipe line from Singu and Yenangyaung. Other companies take it down by river flats. The area under rubber is 86,000 acres.

Manufactures.

There are 1007 factories, over two-fifths of which are engaged in milling rice and over one-fifth are sawmills. The remainder are chiefly engineering works, cotton ginning mills, oil mills for the extraction of oil from groundnuts, and oil refineries connected with the petroleum industry. The average daily number of operatives is over 100,000. At the Census of 1921, 1,935,729 or 2·848 per cent. of the total population were engaged outside agriculture and production.

As is the case in other parts of the Indian Empire, the imported and factory made article is rapidly ousting the home-made and indigenous. But at Amarapura in the Mandalay District a revival has taken place of hand silk-weaving. Burmese wood-carving is still famous and many artists in silver still remain, the finish of whose work is sometimes very fine. Bassein and Mandalay parasols are well known and much admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green, and yellow traced on a ground-work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models, breaking away from the conventionalized forms into which their silver work had crystallized and the new figures display a vigour and life that make them by for the finest examples of art the province can produce.

Administration.

Burma, which was at that time administered as a Lieutenant-Governorship, was deliberately excluded from the operation of the Reform Act of 1919. It was felt that the Province differed so markedly from the other Provinces in the Indian Empire that its requirements should be separately considered. After repeated discussions the question was referred to a special Burma Reforms Committee, which in 1922 recommended that all the essential provisions of the Reform Act should be applied to the Province. This recommendation was accepted and its proposals became law. Under this Act Burma became a Governor's Province, with an executive council and ministers, and conforms to the provinces recreated under the Act of 1919 (q.v.). The main difference is in the size of the electorate. Under the franchise accepted, the rural electorate is estimated at 1,738,871 and the urban electorate has been put as high as 82,478. The Legislative Council consists of 103 members, of which 80 are elected and the balance nominated. Owing to the special status of women in Burma, female franchise was a dopted from the beginning.

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States, subject to the supervision of the Commissioner, Federated Shan States, who is also Superintendent for the Southern Shan States, and the Superintendent of the Northern Shan States. The Northern and Southern Shan States were formed into a Federation on the 1st October 1922, and are designated the F. S. States. The other Shan States in Burma are subject to the supervision of the Commissioner, Sagaing Division. The Civil Criminal and Revenue administration is vested in the Chief of the State, subject to the restrictions contained in the sanad. The law administered is the customary law of the State.

Under the Governor are eight Commissioners of divisions, three in Upper, four in Lower Burma and one in the Federated Shan States.

Justice.

The administration of Civil and Criminal Justice is under the control of the High Court of Judicature at Rangoon, which consists of a Chief Justice and ten other permanent Judges. The Superior Judicial Service consists of District and Sessions Judges; there are also separate Provincial and Subordinate Judicial Services.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Public Works

This Department is administered by two Chief Engineers. Tjere is a Deputy Chief Engineer (Buildings and Roads), besides 11 permanent Superintending Engineers (*i.e.*, 7 for Buildings and Roads and 4 for Irrigation) and 87 Executive Engineers and Assistant Executive Engineers. There are also a Consulting Architect, Electrical Inspector, Water and Sewerage Engineer (Specialist posts) and a River Training Expert, the incumbents of which are stationed at Headquarters.

Police.

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector-General of Police, the latter is under the orders of the Commissioner of Police, Rangoon, an officer of the rank of

Deputy Inspector-General. There is a Dy. Inspector-General, Administration, in charge of administrative detail of the Civil Police, and five other Deputy Inspectors-General, one each for the Northern, Southern and Western Ranges, one for the Railway and Criminal Investigation Department and one for the Military Police.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited from natives of India with a few Kachins, Karens and Chins. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force is to supplement the regular troops in Burma. Their duties, apart from their military work, is to provide escorts for specie, prisoners, etc., and guards for Treasuries, Jails and Courts.

Education.

At the head is the Director of Public Instruction with an Assistant Director, both belonging to the Indian Educational Service. There are nine Inspectors of Schools drawn from the Indian Educational Service, while the Burma Educational Service provides eight Assistant Inspectors. There is also an Inspectress of Schools. There is a Chief Educational Officer for the Federated Shan States.

A centralized, teaching and residential University for Burma, has been established in Rangoon. It now provides courses in Art, Science, Law, Education, Economics, Engineering, Medicine and Forestry.

A remarkable feature of education in Burma is the system of elementary education evolved, generations ago, by the genius of the people. Nearly every village has a monastery (hpoongyi-kyaung); every monastery is a village school and every Burman boy must, in accordance with his religion, attend that school, shaving his head and for the time wearing the yellow robe. At the hpoongyi-kyaungs the boys are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write.

Among special institutions, the Government Technical Institute, Insein, provides courses in Mechanical, Civil and Electrical Engineering and the Agricultural College, Mandalay, courses in Agriculture.

A liberal scheme of State Scholarships provides for the despatch of 12 scholars to Europe each year.

Medical.

The control of the Medical Department is vested in an Inspector-General of Civil Hospitals. Under him are 41 Civil Surgeons. There is also a Director of Public Health, two Assistant Directors of Public Health, the senior of whom is also Director, Public Health Institute, to which is attached a Malaria Bureau, an Inspector-General of Prisons, three whole time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Mental-Hospital.

There is also a Hygiene Publicity Officer.

The Pasteur Institute was opened in Rangoon in July 1915. The Director is a senior member of the Indian Medical Service.

THE FINANCES OF BURMA.

In common with the other Provinces of India, the financial arrangements between the Government of India and the Government of Burma underwent a remodelling in consequence of the reconstitution of the Province on the lines of the other Indian Provinces. The Provinces obtained substantial financial independence. The present position is set out in the following statement :—

ESTIMATED RECEIPTS FOR 1928-29.

(A) *REVENUE RECEIPTS—ORDINARY.*	Rs.
Taxes on Income	13,00,000
Land Revenue	5,42,00,000
Excise	1,24,00,000
Stamps	73,50,000
Forest	2,06,00,000
Registration	7,50,000
Scheduled Taxes	5,00,000
State Railways	....
Irrigation, etc., Works with Capital Accounts	28,70,000
Irrigation, etc., Works (No Capital Accounts)	1,50,000
Interest	11,06,000
Administration of Justice	15,00,000
Jails and Convict Settlements	7,00,000
Police	6,24,000

Ports and Pilotage	1,50,000
Education	6,00,000
Medical	3,00,000
Public Health	1,00,000
Agriculture	75,000
Industries	5,000
Miscellaneous Departments	2,00,000
Civil Works	11,00,000
Receipts in Aid of Superannuation	1,50,002
Stationery and Printing	1,20,000
Miscellaneous	4,20,009
Total (*a*)	10,72,20,000

(*B*) *REVENUE RECEIPTS—EXTRAORDINARY.*

Extraordinary Receipts	....
Total (*a*) & (*b*)	10,72,50,000

(*C*) *DEBT HEADS.*

Famine Insurance Fund	80,000
Depreciation Fund—Government Presses	65,000
Depreciation Fund—Commercial Concerns	50,000
Loans and Advances by Provincial Governments	23,48,000
Advances from Provincial Loans Fund	1,30,00,000
Total (*c*)	1,55,43,060
Total (*a*), (*b*) and (*c*)	12,27,93,000
Opening Balance	45,00,060
Grand Total	12,72,93,000

ESTIMATED DISBURSEMENTS FOR 1928-29.

(*A*) *EXPENDITURE CHARGED TO REVENUE.*

	Rs.
Land Revenue	81,03,000
Excise	21,69,000
Stamps	1,74,000
Forest	82,97,000
Forest Capital Outlay	10,95,000
Registration	2,00,0000
State Railways	....
Miscellaneous Railway Expenditure	....
Construction of Railways	....
Interest on Works with Capital Accounts	22,57,000
Other Revenue Expenditure	10,67,000
Construction of Irrigation Works, etc.	12,09,000
Interest on Ordinary Debt	—24,13,000
General Administration	1,09,48,000
Administration of Justice	69,10,000

Extraordinary Charges ..	70,000
Total (*a*)	11,78,46,000

(B) EXPENDITURE NOT CHARGED TO REVENUE.

Construction of Irrigation, etc., Works ..	16,80,000
Payment of Commuted Value of Pensions ..	17,45,000
Total (*b*)	34,25,000
Total (*a*) & (*b*)	12,12,71,000

(C) DEBT HEADS.

Depreciation Fund—Government Presses ..	54,000
Loans and Advances ..	26,87,000
Advances from Provincial Loans Fund ..	2,18,000
Total (*c*) ..	29,59,000
Total (*a*), (*b*), & (*c*) ..	12,42,30,000
Closing Balance ..	30,63,000
Grand Total ..	12,72,93,000

Administration.

Governor, H. E. Sir Charles Innes, K.C.S.I., C.I.E., I.C.S.

Private Secretary, Captain Thomas Wynford Rees, D.S.O., M.C., 5-6th Rajputana Rifles.

Aide de-Camp, Captain R. Ashley, 2nd Battalion, Wiltshire Regiment (Duke of Edinburgh's).

Honorary Aides-de-Camp, Capt. Charles Richard Goad, R.I.M., and Lieut-Col. H.H. McGann, I.A.

Indian Aides-de-Camp, Subadar-Major and Hon. Lt. Bhagbir Yakha, Bahadur, Naib Commandant Sarran Singh, Sardar Bahadur and Naib Commandant Jalal Din, Khan Bahadur.

EXECUTIVE COUNCIL.

The Hon'ble Mr. Samuel Andrew Smyth, C.S.I., B.A., I.C.S.

The Hon'ble Sir Joseph Augustus Maung Gyi, Kt., Bar-at-Law.

Ministers.

The Hon'ble U Ba Yin, M.B., Ch.B.

The Hon'ble Mr. Lee Ah Yain, Bar-at-Law.

Miscellaneous Appointments.

Director of Agriculture, Andrew McKerral, M.A.

Consulting Architect, S. P. Bush.

Commissioner, Federated Shan States, Taunggyi Southern Shan States, I. G. Lloyd, B.A., I.C.S.

Superintendent, Northern Shan States, G. E. Harvey, B.A., I.C.S.

Director of Public Instruction, C. A. Snow, M.A.

Inspector-General of Police, Major C. de M. Wellborne, O.B.E., I.A.

Chief Conservator of Forests, H. W. A. Watson.

Inspector-General of Civil Hospitals, Colonel W. H. C. Forster, M.B., I.M.S.

Director of Public Health, Lt.-Col. E. Bisset, I.M.S.

Inspector-General of Prisons, Lt.-Col. P. K. Tarapore, I.M.S.

Commissioner of Excise, John Brown Marshall, M.A. B.SC., C.I.E., I.C.S.

Financial Commissioner (Reserved Subjects), Offg., Charles Frederick Grant, M.A., I.C.S.,

Financial Commissioner (Transferred Subjects), Charles William Dunn, C.I.E., B.A., I.C.S.

Postmaster-General, Frank Thomas de Monte.

Chief Commissioners of Burma.

Lieut.-Colonel A. P. Phayre, C.B.	1862
Colonel A. Fytche, C.S.I.	1867
Lieut.-Colonel R. D. Ardagh	1870
The Hon. Ashley Eden, C.S.I.	1871
A. R. Thompson, C.S.I.	1875
C. U. Aitchison, C.S.I.	1878
C. E. Bernard, C.S.I.	1880
C. H. T. Crosthwaite	1883
Sir C. E. Bernard, K.C.S.I.	1886
C. H. T. Crosthwaite, C.S.I.	1887
A. P. MacDonnell, C.S.I. (*a*)	1889
Alexander Mackenzie, C.S.I.	1890
D. M. Smeaton	1892
Sir F. W. R. Fryer, K.C.S.I.	1895

(*a*) Afterwards (by creation) Baron MacDonnell.

Lieutenant-Governors of Burma.

Sir F. W. R. Fryer, K.C.S.I.	1897
Sir H. S. Barnes, K.C.S.I., K.C.V.O.	1903
Sir H. T. White, K.C.I.E.	1905
Sir Harvey Adamson, Kt., K.C.S.I., LL.D.	1910
Sir Harcourt Butler, K.C.S.I., C.I.E.	1915
Sir Reginald Craddock, K.C.S.I.	1917

Governors of Burma.

Sir Harcourt Butler, G.C.I.E., K.C.S.I.	1922
Sir Charles Innes, K.C.S.I., K.C.I.E., I.C.S.	1927

SECRETARIES, DEPUTY SECRETARIES, UNDER-SECRETARIES, Etc., TO GOVERNMENT.

J. Clague, B.A., I.C.S.	Chief Secretary, Home and Political Department.
A. E. Gilliat, I.C.S.	Secretary, Finance Department.
W. H. Payton, B.A., I.C.S.	Officiating Secretary, Education Department
C. R. P. Cooper, B.A., I.C.S.	Secretary, Revenue Department.
F. H. Stevenson, I.C.S.	Secretary, Forest Department.
U. Moung Gale (8) K.S.M., B.A.	Secretary, Local-Government Department.
H. L. Nichols, B.A., I.C.S.	Secretary, Judicial Department.
J. B. G. Bradley, B.A., I.C.S.	Under-Secretary, Home and Political Department.
U. Kyaw Min, B.A., I.C.S.	Under-Secretary, Finance Department.
U. Ba Si, S., B.A.	Under-Secretary, Education Department.
U. Shwe Sein, B.A.	Under-Secretary, Forest Department.
C. O. Edge	Under-Secretary, Revenue Department.
U. Kyaw (3), B.A.	Under-Secretary, Judicial Department.
U. Maung Maung, I.C.S.	Under-Secretary, Local-Government Department.
Rai Sahib A. T. Basu	Assistant Secretary, Finance Department.
Rai Sahib K. M. Basu, B.A.	Assistant Secretary, Home and Political Department.
J. U. D'Costa	Registrar, Home and Political Department.
G. Stracey	Registrar, Office of Secretary, Education and Local Government Department.
P. J. Sim	Registrar, Finance and Revenue Secretary's Office.
S. B. Ghosh, B.A., B.L.	Registrar, Office of Secretary, Forest Department.
J. M. Smith	Registrar, Public Works Department.

FINANCIAL COMMISSIONERS.

C. F. Grant M.A., I.C.S.	Financial Commissioner. (Reserved Subjects,) (Officiating.)
C. W. Dunn, C.I.E., B.A.	Financial Commissioner. (Transferred Subjects.) (Officiating.)
U. Ba Zan, B.A.	Secretary to Financial Commissioner. (Reserved Subjects.)
U. Chit Maung, A.T.M., B.A.	Secretary to Financial Commissioner (Transferred Subjects.)

BURMA LEGISLATIVE COUNCIL

PRESIDENT.

The Hon. Mr. Oscar de Glanville, C.I.E., O.B.E., Bar.-at-Law.

DEPUTY PRESIDENT.

U Paw Tun, A.T.M.,Bar.-at-Law.

Ex-Officio Members.

OFFICIALS.

The Hon'ble Mr. Samuel Andrew Smyth, C.S.I., I.C.S.
The Hon'ble Sir Joseph Augustus Maung Gyi, KT. Barrister-at-Law.

MINISTERS.

The Hon'ble Dr. Ba Yin, M.B., CH. B.
The Hon'ble Mr. Lee Ah Yain, K.I.H., Barrister-at-Law

Nominated Members.

OFFICIALS.

John Pierson Bulkeley, I.E.S.
Arthur Eggar, Bar.-at-Law.
Charles Robert Plant Cooper, I.C.S.
John Clague, I.C.S.
H. L. A. Watson.
Harold Lacy Nichols, I.C.S.
Algernon Earle Gilliat, I.C.S.
H. Lushington Holman Hunt, I.C.S.
U Maung Gale (S), K.S.M.
Major Cyril de Montfort Wellborne, O.B.E., I.A.
Charles William Dunn, C.I.E., I.C.S.
William Browne Brander, C.B.E., C.I.E., I.C.S.
Lieut-Col. Ernest Bisset, M.B., Ch. B., I.M.S.
Charles Frederick Grant, I.C.S.

Non-officials.

Adamjee Hajee Dawood Merchant.
U Lun, K.S.M.
Dr. N. N. Parakh, L.F.P. & L.M.S. (Glas.), L.S.A. (Lon.).
A. Narayana Rao, M.A.
U Po Yin.
U Po Thin, Q.T.M.
John Richard Donovan Glascott, C.I.E., Agent, Burma Railways.
William Thomson Howison.

ELECTED MEMBERS.

Name of Member.	Name and class of constituency represented.

U Ba Dun, Bar.-at-Law.

Bihar and Orissa.

Bihar and Orissa lies between 19°-02′ and 27°-30′ N. latitude and between 82°-31′ and 88°-26′ E. longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal; on the east by Bengal and the Bay of Bengal; on the south by the Bay of Bengal and Madras; and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Governorship of Bihar and Orissa is 8,380 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south-west of the Province and which under the names of the Feudatory States of Orissa and Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Political Agent and Commissioner, Orissa Feudatory States. The area of these territories is 28,656 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111,828 square miles. Two of the provinces of the Governorship of Bihar and Orissa, *viz.*, Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur, is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south-east and walled in on the north-west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People.

The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

The Province has a population of 37,961,858 persons which is very little less than that of France and rather more than that of the Bombay Presidency. The province is almost entirely rural, no fewer than 963 in every 1,000, live in villages. Even so with 339 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only three towns which can be classed as cities, namely, Patna, Gaya and Bhagalpur. During the last thirty years the population of Patna has been steadily diminishing. Hindus form an overwhelming majority of the population. Though the Muhammadans form less than one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 6·16 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north-easterly direction.

Industries.*

The principal industry is agriculture, Bihar more especially North Bihar, being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley, and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,320,700 acres or 48 per cent. of the cropped area of the Province. Wheat is grown on 1,265,909 acres, barley on 1,406,100 acres, maize or Indian-corn on 1,637,500 acres, the latter being an autumn crop Oil-seeds are an important crop, the cultivation having been stimulated by the demand for them in Europe. It is estimated that 2,091,400 acres of land are annually cropped with oil-seeds in the Province. There is irrigation in Shahabad, Gaya, Patna and Champaran districts in Bihar and in Balasore and Cuttack in Orissa. The Indigo industry is steadily on the decline, the total area sown having decreased from 342,000 acres in 1896 to 25,000 acres in 1923. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale. Its place as a crop manufactured for export has been largely taken by sugarcane, the cultivation of which has been considerably extended owing to the high prices given by sugar factories. In the district of Purnea and in Orissa, and parts of the Tirhut Division jute is grown, but the acreage varies according to the price of jute. The last serious famine was in 1895-96, but there was a serious shortage of foodstuffs in the south of the Province in 1919. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *hatia,* due towards the end of September or up to middle of October. Rain at this time not only contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures.

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest

* The figures given in this paragraph relate to British territory only.

in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company of India, Agricultural Implements, Ltd., Enfield Cable Company of India, Enamelled Ironware, Limited, and Indian Steel Wire Products. The population of Jamshedpur is rapidly approaching 100,000 and it consumes 1½ million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both Bengal and Bihar and Orissa with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karanpura in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palaman, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac the latter of which is exported from India to the value of ten crores annually.

Administration.

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship, with an Executive Council and Ministers. The principles of the provincial administration are fully explained in the section. The Provincial Governorships, where the division of the administration into Reserved Subjects, in charge of the Governor and his Executive Council, and Transferred Subjects, in charge of the Governor and Ministers chosen from the Legislative Council, is set out in detail. In all these respects Bihar and Orissa is on the same plane as the other Provinces in India.

Public Works.

The Public Works Department in the Province of Bihar and Orissa consists of two separate branches, *viz.*:—(1) the Buildings and Roads and (2) Irrigation which also deals with railways. Each has a Chief Engineer, who is also Secretary to the Local Government with an Engineer Officer as Under-Secretary in the Buildings and Roads branch and a non-professional Assistant Secretary, in the Irrigation branch under him. The Electrical work of the Province is carried out by an Electric Inspector and an Electrical Engineer and a staff of subordinates.

Justice.

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the non-regulation districts the Deputy Commissioner and his subordinates exercise civil powers and hear rent suits.

Land Tenures.

Estates in the Province of Bihar and Orissa are of three kinds, namely, those permanently settled from 1793 which are to be found in the Patna, Tirhut and Bhagalpur divisions, those temporarily settled as in Chota Nagpur and parts of Orissa, and estates held direct by Government as proprietor or managed by the Court of Wards. The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Permanent Settlement Act. Further, the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement operations in the various districts both permanently and temporarily settled. In the former, the rights of the undertenants are recorded and attested, while in the latter there is the re-settlement of rents. In the re-settlement proceedings, rents are fixed not only for the landlords but also for all the tenants. A settlement can be ordered by Government on application made by landlords or tenants.

The tenures of Orissa are somewhat different. Under the zamindars, that is, the proprietors who took settlement from Government and pay revenue to Government direct, is a class of subordinate proprietors or proprietary tenure holders, who were originally village headmen dealing more or less direct with the revenue authorities. They have a variety of names, such as *mukadam*, *padhan*, *maurusi*, *sarbarakar*, *pursethi*, *khariddar* and *shikmi* zamindar. These sub-proprietors or proprietary tenure holders pay their revenue through the zamindars of the estates within which their lands lie. In Chota Nagpur and the Santal Parganas, the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Both Orissa and Chota Nagpur have their own Tenancy Acts.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are four Deputy Inspectors-General and 29 Superintendents. There are also 28 Assistant Superintendents of Police and 28 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and

distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. There are three companies of unmounted Military Police and one company of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education.

The position of education in the Province with the numbers attending schools, is set out in the section Education and the tables attached thereto (*q. v.*) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities. (*q. v.*)

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 21 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 60 Dispensaries are maintained by Government in addition to 601 Dispensaries maintained by Local bodies, Railways, private persons, etc. 6,042,169 patients including 55,871 in-patients were treated in all the dispensaries in 1927. The total income of the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs. 37,64,884.

A large mental hospital for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution for Indians has been opened at Ranchi since September 1925 for the treatment of patients from Bihar and Orissa and Bengal. An institute for radium treatment has also been established at Patna.

A medical college has been opened at Patna and the Medical School which was in existence at Patna has been transferred to Darbhanga.

THE FINANCES OF BIHAR AND ORISSA.

As Bihar now enjoys practical financial autonomy, the finances are set out in greater detail.

Mr. E. S. Tarlton	Indian Mining Association.
Mr. Amritlal Ojha	Indian Mining Federation.

The Central Provinces and Berar

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 131,052 sq. miles, of which 82,109 are British territory proper, 17,767 (*viz.*, Berar) held on perpetual lease from the Nizam and the remainder held by Feudatory Chiefs. The population (1921) is 13,912,760 under British administration, including 3,075,316 in Berar. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with the Nizam for the maintenance of the Hyderabad contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with the Nizam.

The Country.

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the north-west, the Vindhyan plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the more important cotton tracts of India and the wealthiest part of the C. P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Further east is the far-reaching rice country of Chattisgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The Feudatory States of Bastar and Kankar lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

The People.

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by the Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of the C. P. being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new comers are indicated by the language divisions of the province. Hindi, brought in by the Hindustani-speaking peoples of the North, prevails in the North and East. Marathi in Berar and the west and centre of the C. P. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent. and Gondi by 7 per cent. The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries.

When Sir Richard Temple became first Chief Commissioner of the C. P. the province was landlocked. The only road was that leading in from Jubbulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the zemindari, or great landlord system, ranging with numerous variations, from the great Feudatory chief ships, which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay raiyatwari system. 19,657 square miles of the C. P. is Government Reserved forest; in Berar the forest area is about 3,319 square miles, the total forest area being one-sixth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 66 per cent. of the total land is occupied for cultivation; in the most advanced districts the proportion is 80 per cent. and in Berar the figure is also high. The cultivated area is extending continuously except for the temporary checks caused by bad seasons. Rice is the most important crop of the C. P. Wheat comes next, with 19 per cent., then pulses and other cereals used for food and oil-seeds. with 51 per cent. and cotton with 9 per cent. In Berar cotton occupies 48 per cent. of the cropped area, jowar covers 33 per cent. then wheat and oil seeds. In agriculture more than half the working population is female.

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, owned by Parsi manufacturers, were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of spun yarn exported from the Province during the year ending 31st March 1927 was about 115,90 maunds, valued at Rs. 34,77,210.

The largest numbers engaged in any of the modern Industrial concerns are employed in manganese mining which in 1926 employed 31,057 persons and raised 756,148 tons. Then follow coal mining with an output of 635,174 tons and 8,321 persons employed, the Jubbulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kinds legally so described was 800 in 1927. the latest period for which returns are available and the number of people employed in them 68,603. The same economic influences which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre-war reports showed an increase in volume by one-third in eight years.

Administration.

The administration of the Central Provinces and Berar is conducted by a Governor-in-Council, who is appointed by the Crown. He is assisted by eight Secretaries and six under-secretaries. Under the reform scheme the administration is conducted by a Governor with an Executive Council of two members, one of whom is a non-official and two Ministers, the latter being in charge of the transferred subjects.

The local legislature consists of 73 members distributed as follows:—38 elected from the C.P.; 17 elected from Berar; 2 members of the Executive Council; 8 nominated non-officials; 8 nominated officials. The Governor (who is not a member of the Council) has the right of nominating two additional members with special knowledge on any subject regarding which legislation is before the Chamber. The C. P. are divided for administrative purposes nto four divisions and Berar constitutes another division. Each of these is controlled by a Commissioner. The divisions are sub-divided into districts, each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, Registrar-General of Births, Deaths and Marriages and Inspector-General of Registration, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer and the two Chief Engineers, Public Works Department, Buildings and Roads and Irrigation Branches. The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon, who is generally also Superintendent of the District Jail and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, usually natives of India, but including a few Europeans and Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service, who are nearly always natives of India. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body, is executive headman.

Justice.

The Court of the Judicial Commissioner is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

The Court sits at Nagpur and consists of a Judicial Commissioner and 4 Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Sub-Judges of the 1st and 2nd class.

Local Self-Government.

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope and the C. P. Municipalities Act passed towards the end of the year 1922 has considerably increased the power of the Municipal Committees. The C. P. Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The general basis of the scheme is the Local Board for each tahsil and the District Council for each district. The larger towns have municipalities, there being 65 such bodies in the Province.

Under the Central Provinces Local Self-Government Act passed in 1920 the Local Boards consist of elected representatives of circles and nominated members other than Government officials not exceeding in number one-fourth of the Board, and the constitution of the District Council is a certain proportion of elected representatives of Local Boards, of members selected by those representatives and of members, other than Government servants, nominated by Government.

The District Councils in the Central Provinces have power of taxation within certain

limits and Local Boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self-Government Act has also been applied to Berar. The Office Bearers of the District Councils and Local Boards are with few exceptions non-officials.

Rural education and sanitation are among the primary objects to which these bodies direct their attention, while expenditure on famine relief is also a legitimate charge upon the District Council funds.

The Central Provinces Village Panchayat Act was passed in the year 1920. So far 165 Panchayats have been established. As the result of a recommendation of a Committee appointed in 1925 to look into the question of Panchayats, a Village Panchayat Officer has been appointed to guide the development of the Panchayat system.

Public Works.

The Public Works Department is controlled by two Chief Engineers, who are also Secretaries to the Government. There are three Superintending Engineers for Roads and Buildings and three for Irrigation. The Province is well covered by a network of roads, some of which have been constructed as famine relief works. In most cases these roads are not fully bridged and are, therefore, impassable to traffic at times during the rains. During recent years Government has adopted the policy of transfer of State roads and buildings to District Councils for maintenance and a number of roads and buildings have been handed over to these Bodies, in pursuance of this policy.

State Irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-03). The Irrigation Branch of the department was separated from the Roads and Buildings Branch in 1920. During the last twenty years a sum of about Rs. 6 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula, Mahanadi, Kharung and Maniari projects. Three works, *viz.*, the Mahanadi and Wainganga Canals and the Asola Mendha tank, were originally sanctioned as productive works and the remainder were all sanctioned as unproductive works. The three works sanctioned as productive have all failed to justify their classification in this category and have now been transferred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 400,000 acres, and the income from these works is approximately equal to the expenditure incurred on their maintenance and management.

Police.

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per 9 square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. A Special Armed Force of 735 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education.

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, a Deputy Director, five Inspectors and two Inspectresses who in their turn are assisted by eight Assistant Inspectors and four Assistant Inspectresses. An Agency Inspector supervises the schools in the Feudatory States. Schools are divided into schools for general education and schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main divisions of schools for general education is into Primary and Secondary. In the Primary Schools the teaching is conducted wholly in the vernacular and these schools are known as Vernacular Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Vernacular Middle Schools in which instruction is given wholly in the Vernacular, or Anglo-Vernacular Middle Schools in which instruction is given both in English and the Vernacular. In the High School classes instruction until recently was given in English but the vernacular was adopted as the medium of instruction at the beginning of the school year 1922-23. For the convenience of pupils whose mother tongue is not a recognised vernacular of the locality a few English medium classes are still maintained. For administrative purposes schools are further divided according to their management into schools under public management and schools controlled by private bodies. The former consist of (a) schools controlled by Government and (b) schools controlled by Local Bodies or Boards. The latter consist of (a) Schools which are aided by grant from Government or from Local and Municipal Funds and (b) unaided schools. All schools under public management and all aided schools conform in their courses of study to the standards prescribed by the Education Department or by the High School Education Board. They are subject to inspection by the Department and to the general rules governing schools of this type. They are "recognised" by the Department and their pupils may appear as candidates for any prescribed examination for which they are otherwise eligible. Unaided schools do not follow the rules of the Department, nor are they subject to inspection by the Department. They are mostly indigenous schools which have been too recently opened

to have acquired "recognition." Their pupils may not appear as candidates at any of the prescribed examinations without the previous sanction of the Department.

As an experimental measure the inspection and administration of Board Vernacular schools have been transferred to the District Councils at Bhandara, Balaghat, Amraoti and Hoshangabad.

The Primary Education Bill which was passed by the Local Legislative Council in March 1920 marks an important stage by giving Local Bodies power to introduce compulsory education in the areas under their jurisdictions.

Higher education is at present given in five colleges. In Nagpur Morris College teaches up to the M.A. standard in Arts. Hislop College is affiliated up to the M.A. standard in Arts. The Victoria College of Science teaches up to the M.Sc. standard in Science. Up to the B.Sc. standard it works in conjunction with Morris College and Hislop College. In Jubbulpore Robertson College teaches up to the B.A. and B.Sc. standards. The King Edward College teaches up to the B.A. degree in Arts and the Intermediate degree in Science. The province contains also a Teachers' Training College at Jubbulpore and Normal Schools at different centres, and an Engineering School at Nagpur. There is a Technical Institute at Amraoti, which is controlled by the Department of Industries. There is also an Agricultural College at Nagpur under the Department of Agriculture.

Collegiate Education is under the control of the University of Nagpur to which the colleges of the province are affiliated. The University was established by the Nagpur University Act of 1923. A University Law College has been established at Nagpur with effect from the 1st July 1925.

As a corollary to the Central Provinces University Act the Central Provinces High School Education Bill was passed in 1923 on the lines of the United Provinces Intermediate and High School Education Act. Its aim is to free the High Schools of the Province from the control of the University and from this point of view to substitute for the University a Board of Secondary Education for the regulation and control of Secondary Education. In order, however, that the connection between Secondary and University Education may still be maintained the Bill provides that one-third of the members of the Board will be drawn from men experienced in university affairs and that of this one-third not less than two-thirds shall be teachers in the University or in colleges affiliated thereto. At the same time teachers engaged in school work are also represented on the Board.

Medical.

The medical and sanitary services of the province are respectively controlled by an Inspector-General of Civil Hospitals and a Director of Public Health. The medical department has made much progress since the year 1911. A striking advance has been made in recent years with urban sanitation, and the opening of a Medical School at Nagpur. The principal medical institutions are the Mayo Hospital at Nagpur, opened in 1874, with accommodation for 218 in-patients; the Victoria Hospital at Jubbulpore, opened in 1886, and accommodation for 99 in-patients, the Lady Dufferin Hospital and the Mure Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jubbulpore, these last four being for women and children and containing together accommodation for 178 in-patients. Two important hospitals for women have been recently opened at Chhindwara and Khandwa, and at all district headquarters where no separate women's hospitals exist, sections of the Main Hospitals have been opened for the treatment of women by women. The Mayo Hospital, Nagpur, was provincialised in 1923, the Main Hospital at Amraoti in 1925, the Victoria Hospital at Jubbulpore in 1926, and the Main Hospital at Raipur in 1928. In accordance with recent policy, 118 out of 177 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur. Vaccination is compulsory in nearly allMunicipal towns to which the Vaccination Act has been extended. The Government in 1913, sanctioned the opening of peripatetic dispensaries in unhealthy areas. There are at present 39 such dispensaries. A school for training health workers has been started at Nagpur and 35 Infant Welfare Centres have been opened A start in the direction of opening a Health Institute has been made with the initiation of chemical and bacteriological works with a small staff in Nagpur.

Finances.

The budget presented this year was a progressive one. Its success was in no small measure due to the cautious and skilful handling of the provincial finances in the post-reform period by successive finance members. The willingness of the Council to submit to new taxation during the depressing days of 1923 was another factor that tended to maintain the equilibrium of the finances. The shadow of famine brooded over the northern districts in the provinces in the current year, but Government lost no time in extending relief on a lavish scale, with the result that the outlook is more hopeful.

FINANCES OF THE CENTRAL PROVINCES.

ESTIMATED REVENUE FOR 1928-29.

Principal Heads of Revenue.	Rs.
Taxes on Income	1,62,000
Land Revenue	2,38,20,000

Non-Officials.

Raja Thakur Raghuraj Singh of Pandaria, District Bilaspur (Zamindari and Jagirdari Estates).

Mr. George Paris Dick, C.I.E., Bar-at-Law, Nagpur (European and Anglo-Indian Communities).

Mr. Rati Ram of Kewtadabri in the Bilaspur District (Depressed Classes).

Mr. Ganesh Akaji Gavai of Nagpur (Depressed Classes).

Mr. Sukhaji Urkuda Katangale of Nagpur (Depressed Classes).

Mr. Laxman Krishna Ogle, Hindu Missionary Boarding, Badnera Road, Amraoti (Depressed Classes).

Mr. A. H. Parry, C/o The Pench Valley Coal Company, Limited, Post Office Parasia, District Chhindum.

Mr. R. W Fulay, M.A ; LL.B. (Urban Factory Labourers).

ELECTED MEMBERS.

A.—Members elected from the Central Provinces.

Name.	Constituency.
Rai Bahadur Parbhat Chandra Bose, B.A., LL.B.	Jubbulpore City, Non-Muhammadan (Urban).
Mr. Keshao Rao Khandekar	Jubbulpore Division (Urban).
The Hon'ble Mr. E. Raghavendra Rao, Bar-at-Law.	Chhattisgarh Division (Urban).
Mr. Chandra Gopal Misra, B.A., LL.B.	Nerbudda Division (Urban).
Dr. N. B. Khare, M.D.	Nagpur City-cum-Kamptee.
Mr. G. R. Pradhan	Do. do.
Mr. Tukaram Jairam Kedar, B.A., LL.B. ..	Nagpur Division (Urban).
Mr. Rajendra Singh, M.R.A.S.	Jubbulpore District (South), Non-Muhammadan (Rural).
Pandit Kashi Prasad Pande, M.A., LL.B. ..	Jubbulpore District (North).
Mr. Gokulchand Singai	Damoh District.
Mr. Kedar Nath Rohan, B.SC., LL.B.	Saugor District.
Mr. Durgashanker Kripashanker Mehta ..	Seoni District.
Mr. Umesh Datta Pathak	Mandla District.
Mahant Laxminarayandas	Raipur District (North).

Name.	Constituency.
Seth Sheodas Daga	Raipur District (South).
Thakur Chedilal, Bar-at-Law	Bilaspur District.
Mr. Ghanshiam Singh Gupta	Drug District.
Mr. Gajadhar Prasad Jaiswal, B.SC., LL.B. ..	Hoshangabad District.
Seth Thakurdas Goverdhandas	Nimar District.
Chaudhari Daulatsingh	Narsinghpur District.
Mr. Vishwanath Damodar Salpekar	Chhindwara District.
Mr. Dipchand Lakshmichand	Betul District.
Mr. Krishnaji Pandurang Vaidya, B.A., LL.B. ..	Nagpur District (East)
Mr. Vinayak Vithal Kalikar	Nagpur District (West).
Mr. Govind Damodhar Charde, B.A., LL.B ..	Wardha Tahsil.
Mr. Narayan Rajaram Nagle, B.A., LL.B. ..	Wardha District.
Mr. Nilkanth Yadaorao Deotale	Chanda District.
Mr. Ganpatrao Yadaorao Pande	Bhandara District.
Rao Bahadur Narainrao Krishnarao Kelkar ..	Balaghat District.
Mr. Majiduddin Ahmed	Jubbulpore Division (Rural), Muhamamadan (Rural).
Mr. Syed Wakil Ahmad Rizir, B. A., LL. B. ..	Chhattisgarh Division (Rural).
Mr. Syed Hifazat Ali, B.A., LL.B.	Nerbudda Division (Rural).
Khan Sahib Syed Yasin Syed Lal, B.A., LL.B...	Nagpur Division (Rural)
Mr. Shyam Sunder Bhargava	Jubbulpore and Nerbudda Landholders, Special Constituencies.
The Hon'ble Sir Shankerrao Madhorao Chitnavis, Kt., I.S.O..	Nagpur and Chhattisgarh Landholders.
Mr. M. K. Golwalkar, B.A., LL.B.	Nagpur University.
Mr. L. H. Bartlett	Central Provinces and Berar Mining Association.
Seth Mathuradas Mohota	Central Provinces Commerce and Industry.

B.—Members from Berar nominated after election.

Name.	Constituency.
Mr. Pannalal Bansilal	East Berar (Municipal), Non-Muhammadan (Urban).
Mr. Purushottam Balwant Gole	West Berar (Municipal).
The Hon'ble Mr. Ramrao Madhaorao Deshmukh, Bar-at-Law	Amraoti (Central), Non-Muhammadan (Rural).
Mr. Ramrao Anandrao Deshmukh	Amraoti (East).
Mr. Uttamrao Sitaramji	Amraoti (West).
Rao Sahib Tukaram Sheoram Korde	Akola (East).
Mr. Namdeo Sadasheo Patil	Akola (North-West).
Mr. Naik Dinkarrao Dharrao Rajurkar.. ..	Akola (South).
Mr. Yadav Madhav Kale	Buldana (Central).
Mr. Panduraj Dinanath Pundalik	Buldana (Malkapur and Jalgaon).
Mr. Mahadeo Paikaji Kolhe	Yeotmal (East).
Mr. Baburao Krishnaji Patil	Yeotmal (West).
Syed Mobinur Rahman, B.A., LL.B.	Berar (Municipal), Muhammadan (Urban).
Mr. Muhammad Sharfuddin, B.A., LL.B. ..	East Berar (Rural), Muhammadan (Rural).
Khan Bahadur Mirza Rahman Beg	West Berar (Rural).
Mr. Balkrishna Ganesh Khaparde	Berar Landholders, Special Constituencies.
Mr. Brijlal Nandlal Biyani	Berar Commerce and Industry.

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 39,000 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara; the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Kohat, Bannu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 13,418 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor-General. The area of this tract is roughly 25,500 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 130 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. The key to the history of the people of the N.-W. F. P. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B. C. 327 ,then the invasions of the Sakas, and of the White Huns and later the two great waves of Muhammadan invasion. Last came the Sikh invasion beginning in 1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris in 1919-1920. These have resulted in the establishment at Razmak, a position dominating the Mahsud Waziri country, of a permanent garrison of 10,000 troops drawn mostly from stations lying in the Plains immediately below the hills. A circular road from Bannu, through Razmak to Sororogha, Jandola and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area.

The division of the Frontier Province from the Punjab has frequently been discussed, with the double object, in the earlier stages of these debates, of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department. In political questions there is no intermediary between the Chief Commissioner and the local officer; an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected. The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and unofficials to investigate it. The Committee, presided over by Mr. D. de S. Bray, M.L.A., Joint Foreign Secretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Raza Ali, M.C.S., T. Rangachari, Chaudhri Shahabuddin, N. M. Samarth and K. B. Abdur Rahim Khan, members of the Legislative Assembly, H. N. Bolton, I.C.S., (Foreign Dept.) and A. H. Parker (I.C.S. Punjab) (members.) The inquiry developed practically into a contest between Mahomedans and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable then the placing of the judicial

administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the Border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members, recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India;

Early creation of a Legislative Council for the Settled Districts and appointment of Member of Council and Minister;

Appointment of a second Judicial Commissioner which has since been sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab, so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

"If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reforms Scheme after which it is now striving we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her."

The People.

The total population of the N.-W. F. P. (1921) is 5,076,476, made up as follows:—

Hazara	622,349
Trans-Indus Districts	1,628,991
Trans-Border Area	2,825,136

This last figure is estimated. There are only 561·3 females per 1,000 males in the towns, and 872·2 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N.-W. F. P. any more than in other parts of Northern India where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 26·9 and the death-rate 19·8. The birth-rate was normal below the average for the preceding quinquennium—in Hazara 35 per cent below it—a figure indicating the unusually low vitality of the people after a preceding severe epidemic of malaria. The population is naturally increasing but emigration reduces the net result.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent. of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

Under the North-West Frontier Province Law and Justice Regulation of 1901, custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna.

The climatic conditions of the N.-W.F.P. which is mainly the mountainous region, but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.-W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal: the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely. The following description of the Daman, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west, occurs in an account written some years ago by Captain Crostwaite: "Men drink once a day and the cattle every second day. Washing is an impossible luxury. . . . It is possible in the hot weather to ride thirty miles and neither hear a dog bark nor see the smoke of a single fire." With the exception of the Kunhar River, in Hazara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south-eastern plains to barren hills, pine forests and fertile mountain valleys. Tigers used to abound in the forests but are

now quite extinct; leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bear, deer and monkeys are found; a great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal:—

Takht-i-Sulaiman, Sulaiman Range, in Dera Ismail Khan, 11,292 feet.

In a recent report P. A. South Waz calls it Pir Ghal and points out that the former spelling is incorrect. Fih N. A.

Pir Ghal, Sulaiman Range, in Mahsud Waziristan, 11,583 feet.

Sika Ram, in the Safed Koh, in the Kurram Agency, 15,621 feet.

Kagan Peaks of the Himalayas, in the Hazara District, 10,000 to 16,700 feet.

Istragh Peak (18,900 ft.), Kachin Peak (22,641 ft.), Tirich Mir (25,426 ft.), all in the Hindu Kush, on the northern border of Chitral Agency.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. Special mention may be made of the railway comparatively recently opened linking Baluchistan, in the south-west of the N.-W. F. P., *via* Nushki with south-east Persia. The line connects with the north-west railway system of India and extends 343 miles to Duzdap, within the Persian border. Two weekly trains run each way and the freight carried largely consists of carpets, wool and dates, from Persia and of tea, sugar and piece-goods from the Indian side. Though the railway is primarily strategic in purpose its commercial and political effects will be considerable. The travelling traders (or Powin dans) from the trans-frontierarea have always pursued their wanderings into India and now, instead of doing their trading in towns near the border, carry it by train to the large cities in India. The Railway line from Pir to Lankitshina which is complete and open to public traffic now will similarly, in course of time, develop both the manner and amount of transport communications and trade. The new roads in Waziristan are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 32 per cent. and uncultivated to 68 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrassments. In the British administered districts 19 per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13·3 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a few years ago, will bring ease and prosperity to a number of peasant homes.

Administration.

The administration of the North-West Frontier Province is conducted by the Chief Commissioner and Agent to the Governor-General in Council. His staff consists of—

(1) Officers of the Political Department of the Government of India.

(2) Members of the Provincial Civil Service.

(3) Members of the Subordinate Civil Service.

(4) Superintendents and Assistant Superintendents of Police.

(5) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the first head above are:—

	Post		Total
Administration.	Chief Commissioner & Agent to the Governor-General		5
	Secretary		
	Under-Secretary		
	Personal Assistant		
	Revenue Commissioner and Revenue Secretary		
	Resident in Waziristan		1
	Deputy Commissioners	5	12
	Political Agents	5	
	District Judges	2	
	Assistant Commissioners and Assistant Political Agents		13
Judicial Commr.'s Court & Divisional Judges.	Two Judicial Commissioners.		4
	Two Divisional and Sessions Judges.		
	One Additional ditto.		

The districts under the Deputy Commissioners are divided into from two to five sub-collectorates, in charge of tahsildars, who are invested with criminal and civil and revenue powers, and are assisted by naib-tahsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, who is also the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. There are four divisions of the Roads and Buildings Branch of the Public Works Department, each under an Executive Engineer. The Irrigation Department of the P. W. D. is in charge of a Chief Engineer, irrigation, who is also *ex-officio* Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions divisions, each presided over by a Divisional and Sessions Judge. The two Judicial Commissioners are the controlling authority in the Judicial branch of the administration, and their Courts are the highest criminal and appellate tribunals in this Province. The improvements needed to bring the judicial administration up-to-date, in accord with the growth of the business of administration, are dealt with in the Inquiry Committee's report to which reference was made above. The principal officers in the present Administration are:—

Agent to the Governor-General and Chief Commissioner, The Hon. Sir Horatio Norman Bolton, K.C.I.E., C.S.I., I.C.S. (Assumed charge, 7th July 1923.)

Personal Assistant, Captain N. S. Alington, M.C.

Resident, Waziristan, Lt.-Col. C. E. Bruce, C.I.E., C.B.E.

Judicial Commissioner, J. H. R. Fraser, C.I.E., O.B.E.

Additional Judicial Commissioner, K. B. Saad-ud-din Khan, B.A., L.L.B.

Revenue Commissioner, (Offg) Lieut. Col. R. Garralt, I.A.

Secretary to Chief Commissioner, C. H. Gidney, I.C.S.

Under-Secretary to Chief Commissioner, K. P. S. Mennon.

Assistant Financial Secretary to Chief Commissioner, R. S. Lala Chunni Lal.

Indian Personal Assistant to Chief Commissioner, Khan Saheb Haji Arbah Shams-ud-Din Khan

Secretary, Public Works Department, Buildings and Roads Branch, Lt. Col. E. de. L. Young.

Secretary, Public Works Department, Irrigation Branch, S. Walker.

Chief Medical Officer, Lieut.-Col. C. I. Brierley, I.M.S.

Inspector-General of Police, F. C. Isemonger, C.B.E.

Commandant, Frontier Constabulary, B.C.A. Lawther.

Director of Public Instruction, J. H. Towle, I.E.S., M.A.

Superintendent, Archæological Survey, H. Hargreaves.

Divisional and Sessions Judges, J. Almond, I.C.S. (Peshawar).
Rai Bahadur Lehu Singh B.A., (Derajah).

Political Agents.

C. Latimer, C.I.E. Dir, Swat and Chitral.
Lt.-Col. W. A. Garstin, C.B.E. Khyber.
Captain C. G. N. Edwards, North Waziristan.
R. R. Maconachie, C.I.E. Kurram.
Major C.E.U. Bremner, M.C. South Waziristan.

Deputy Commissioners.

Lt.-Col. M. E. Rae. Hazara.
L. W. Jardine. Peshawar.
Major W. K. Fraser-Tytler, M.C.
Major A. E. B, Parsons, C.B.E., D.S.O. I.A., Bannu.
Major W. K. Fraser Tytler, M.C. Dera Ismail Khan.
Major Thompson Glover, O.B.E., Kohat.

Former Chief Commissioners.

Lieut.-Col. Sir Harold Deane, K.C.S.I. Died 7th July 1908.
Lieut.-Col. Sir George Roos-Keppel, G.C.I.E., K.C.S.I., to 9th September 1919.
The Hon. Sir Alfred Hamilton Grant, K.C.I.E., K.C.S.I., from September 1919 to 8th March 1921.
The Hon. Sir John Loader Maffey, K.C.V.O., C.S.I., C.I.E., I.C.S., from 8th March 1921 to 6th November 1925.

The Province of Assam, omitting the partly administered and unadministered tracts on its northern and eastern borders, comprises an area of some 63,510 square miles. It includes the Assam Valley Division, the Surma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population.

The total population of the Province in 1921 was 7,990,246, of whom 384,016 were in Manipur. Of the population in 1921, 2½ millions were Mahomedans, 4½ millions Hindus and 1½ millions Animists. 44 per cent. of the population speak Bengali, 22 per cent. speak Assamese: other languages spoken in the province are Hindi, Uriya and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 130, which compared with that of most other parts of India is low, but is more than double that of Burma.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 5 million acres being devoted to this crop. Except in the Himalayan Terai irrigation is unnecessary. Tea and jute are the most important crops grown for export. The area under tea consists of 420,564 acres. Wheat and tobacco are also grown and about 66 square miles are devoted to sugarcane.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 67 to 229 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 458 inches. The temperature ranges from 59 at Sibsagar in January to 84·8 in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur districts, where about 350,000 tons are raised annually. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Garo hills. Petroleum is worked only in Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N. E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S.S.E. trend.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom; the cloth is being gradually displaced by imported goods of finer texture and colour. Tea manufacture is the most important industry of the province. Boat building, brass and metal and earthenwares, and limestone burning are the other industries apart from agriculture, which itself employs about 89 per cent. of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications.

The trade of Assam is chiefly carried by river, but increasing use is being made of the Assam-Bengal Railway which runs from the port of Chittagong through the North Cachar Hills to Tinsukia, a station on the Dibru-Sadiya Railway, and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the eastern end of the Surma Valley and another runs through the west of the Assam Valley from Lumding to Gauhati where it effects a junction with the Eastern Bengal Railway. The Eastern Bengal Railway connects Assam with the Bengal system *via* the valley of the Brahmaputra. The excellence of its water communication makes Assam less dependent upon roads than other parts of India; but in recent years the road system has been developed and there is an unmetalled trunk road through the whole length of the Brahmaputra Valley and an excellent road from Gauhati to Shillong. A large fleet of steamers maintained by the India General Steam Navigation Company and the Rivers Steam Navigation Company plies on the rivers of both valleys. An alternate day service of passenger boats runs between Goalundo and Dibrugarh. The Government of Assam have now launched into a large programme of road improvements.

THE FINANCES OF ASSAM.

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1919. The present financial position is set out in the following table:—

Estimated Provincial Revenue for 1928-29.

	(In Thousands of Rupees.)
Taxes on Income	6,10
Land Revenue	1,19,01
Excise	68,73
Stamps	20,75
Forest	40,39
Registration	2,35

Estimated Provincial Revenue for 1928-29.—(contd.)

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912: the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provinces to suit its undeveloped character with the older major provinces of India.

The capital is Shillong, a town laid out with great taste and jndgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

Governor.

H. E. Sir Egbert Laurie Lucas Hammond, K.C.S.I., C.B.E., I.C.S.

Executive Council.

The Hon'ble Khan Bahadur Kutub-ud-din Ahmad—*Vice-President.*

The Hon'ble Mr. Arthur William Botham, C.S.I., C.I.E., I.C.S.

Ministers to His Excellency the Governor.

The Hon'ble Sir Saiyid Muhammad Saadulla, Kt., M.A., B.L.

The Hon'ble the Rev. James Joy Mohan Nichols-Roy, B.A.

Personal Staff of His Excellency the Governor.

Private Secretary, Lieut. J. M. W. Martin, B.A., 68th Field Battery.

Aide-de-Camp, Lieut. d'A P. P. Thompson, King's Shropshire Light Infantry.

Honorary Aide-de-Camp, Sardar Bahadur Subadar Pokul Thapa.

Honorary Aide-de-Camp, Subadar-Major Nainsing Mall.

Honorary Aide-de-Camp, Lieutenant-Colonel J. J. T. MacKnight, V.D.

Secretaries, etc., to Government.

Chief Secretary, G. E. Soames, C.I.E. I.C.S.

Secretary to Government (Transferred Departments), R. Friel, I.C.S.

Secretary to Government (Finance and Revenue) H. M. Prichard, I.C.S.

Under Secretary to Government, H. Weightman, I.C.S.

Under Secretary (Transferred Departments), G. S. Guha, M.A., B.L.

Secretary to Government (Legislative Department). and Secretary to the Assam Legislative Council, B. N. Rau, I.C.S.

Secretary to Government in the P.W.D., B. A. Blenkinsop, I.S.E. (offg.)

Under Secretary, P.W.D., K. E. L. Pennell, I.S.E., M.C.

Assistant Secretary, Finance and Revenue Departments, A. V. Jones.

Registrar, Assam Secretariat (Civil), Rai Bahadur Mahendra Kumar Gupta.

Registrar, Assam Secretariat (P. W. D.), Babu Lalit Lal Mitra (offg.)

Heads of Departments.

Director of Land Records, Registrar of Joint Stock Companies, etc., W. L. Scott, I.C.S.

Director of Agriculture and Industries, Rai Bahadur Radha Nath Phukan (offg.)

Superintendent, Civil Veterinary Department, W. Harris.

Conservator of Forests, Eastern Circle, F. H. Cavendish.

Conservator of Forests, Western Circle, W. R. Le G. Jacob.

Commissioner of Excise, Assam, F. A. S. Thomas, I.C.S.

Director of Surveys, Col. A. A. McHarg., D.S.O., R.E.

Superintendent and Remembrancer of Legal Affairs and Administrator General, B. N. Rau, I.C.S.

Inspector General of Police, W. C. M. Dundas, C.I.E.

Director of Public Instruction, G. A. Small (acting).

Inspector General of Civil Hospitals and Prisons, Col. G. Hutcheson.

Director of Public Health, Lt.-Col. T. D. Murison.

Chief Engineer, B. A. Blenkinsop (offg.).

Governors.

Sir Nicholas Dodd Beatson Bell, K.C.S.I., K.C.I.E., 1921.

Sir William Sinclair Marris, K.C.S.I., K.C.I.E., 1922.

Sir John Henry Kerr, K.C.S.I., K.C.I.E., 1925.

Sir William James Reid, K.C.I.E., C.S.I., 1925.

Sir Egbert Laurie, Lucas Hammond, K.C.S.I., C.B.E., 1927.

ASSAM LEGISLATIVE COUNCIL.

Revd. John Ceredig Evans, representing the inhabitants of backward tracts.
Rai Bahadur Radha Kanta Handiqui.
Srijut Rabindra Narain Chaudhuri.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78,434 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1921 it contains 799,625 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorarud, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries.

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig, which has the heaviest rainfall, records no more than 11¾ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 99 public schools of all kinds, with 5,846 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat; but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Sharigh on the Sind-Pishin railway and in the Bolan Pass. The output of coal in 1927-28 was 14,714 tons. Chromite is extracted in the Zhob District near Hindubagh. The Chrome output fell off owing to poorer demand. Lime-stone is quarried in small quantities. The output of Chromite during 1927-28 amounted to 14,034 tons.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General and Chief Commissioner. Next in rank comes the Revenue Commissioner who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies which normally numbered 2,300 odd play an unobtrusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily two irregular Corps in the Province; the Zhob Militia and the Mekran Levy Corps. The Province does not pay for itself and receives large subsidies from the Imperial Government.

Agent to the Governor-General and Chief Commissioner in Baluchistan. The Hon'ble Lt.-Col. H. B. St. John, C.I.E., C.B.E.

Revenue and Judicial Commissioner, Lt.-Col. E. H. S. James, C.I.E., C.B.E.

Secretary, Public Works Department, Brigadier W. H. Evans, C.I.E., D.S.O., R.E.

Secretary to the Agent to the Governor-General and Chief Commissioner. Lieut-Colonel C. T. C. Plowden.

Political Agent, Zhob, Major Severn Williams.

Political Agent, Kalat and Bolan Pass, Lt.-Col. J. A. Brett, C.I.E.

Political Agent and Deputy Commissioner Quetta, Mr. R. E. L. Wingate, I.C.S.

Political Agent, Sibi. Major G. L. Betham, M.C.
Political Agent, Loralai. Mr. H. D. G. Law, C.I.E., I.C.S.

Assistant Political Agent and Assistant Commissioner, Quetta-Pishin, Capt. R. R. Burnett.
Political Agent, Chagai, Capt. H. M. Poulton.
Political Agent, Sibi, Major G. L. Betham, M.C.
Assistant Political Agent, Sibi, Sardar Sahib Gurdit Singh.

Residency Surgeon and Chief Medical Officer, Lt.-Col. F. E. Wilson, I.M.S.

Civil Surgeon, Sibi, Lt.-Col. J. Anderson.
Civil Surgeon, Quetta, Major R. L. Vance, I.M.S.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair by sea 780 miles from Calcutta, 740 miles from Madras and 360 miles from Rangoon, with which ports there is regular communication.

The land area of the islands under the administration is 3,143 square miles, namely, 2,508 square miles in the Andamans and 635 square miles in the Nicobars. The total population is 26,459. The Islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1858, is the most important in India.

Chief Commissioner of Port Blair, Lieut.-Col. M. L. Ferrar, C.S.I., C.I.E., O.B.E., I.A.
Commandant, Military Police, Lt.-Col. G. C. Wheeler, V.C., I.A.

Senior Medical Officer and Civil Surgeon, Major J. M. R. Hennessy, I.M.S.

COORG.

Coorg is a small petty Province in Southern India, west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan Tippu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. A Legislative Council consisting of 15 elected members and five nominated members was created in 1923. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to overproduction and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Chief Commissioner, Coorg—The Hon. Mr. S. E. Pears, C.S.I., C.I.E., I.C.S. (on leave); Mr. L. M. Crump, C. I. E. (*Offg.*)

AJMER-MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Agent to the Governor-General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara, with a total area of 2,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Fifty-five per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oilseeds and wheat.

Chief Commissioner, The Hon. Mr. L. W. Reynolds, C.I.E., M.C.

Aden.

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition in 1839 was the outcome of an outrage committed by the local Abdali chief upon the passengers and crew of a British bungalow wrecked in the neighbourhood. Various acts of treachery supervened during the negotiations regarding the bungalow outrage and Aden was captured by a force sent by the Bombay Government under Major Baillie. The act has been described as one of those opportune political strokes which have given geographical continuity to British possessions scattered over the world.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground. This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though sometimes only just above water. The highest peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1,775 feet above sea level. Rugged spurs, with valleys between, radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1868 and the adjoining tract of Shaikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an overflowing population.

Attached to the settlement of Aden are the Islands of Perim, an island of 5 square miles extent in the Straits of Bab-el-Mandeb, in the entrance to the Arabian Sea; Sokotra island, at the entrance to the Gulf of Aden, in the Arabian Sea, came under the British sphere of influence by a Protectorate treaty in 1886 and 1,382 miles in extent; and the five small Kuria Muria islands, ceded by the Imam of Maskat in 1854 for the purpose of landing the Red Sea cable, and otherwise valuable only for the guano deposits found upon them. They are off the Arabian coast about two-thirds of the way from Aden to Maskat. The whole extent of the Aden settlement, including Aden, Little Aden, Shaikh Othman and Perim, is approximately 80 miles. The 1921 census showed Aden, with Little Aden, Shaikh Othman, and Perim to have a population of 56,571. The population of Perim is 2,075 largely dependent on the Coal Depot maintained there by a commercial firm. That of Sokotra is 12,000, mostly pastoral and migratory inland, fishing on the coast.

Strategic Importance.

Aden's first importance is as a naval and military station of strategic importance. This aspect was ably discussed by Colonel A. M. Murray, in his "Imperial Outposts." He points out that Aden is not a naval base in the same sense that Gibraltar, Malta and Hong-Kong were made, but a *point d'appui*, a rendezvous and striking point for the fleet. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategist's point of view this is its primary purpose and the *raison d'etre* of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength, invulnerable by sea and by land, dominating the entrance to the Red Sea, and valuable to its owners as a commercial emporium, a port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The harbour is dredged to 30 below I.S. L.W. and is approached by a dredged cut of the same depth. This cut extends seaward to join the 5 fathom contour and thus gives a depth at low water spring tides of 5 fathoms for vessels entering the Port. The junction of this cut with the 5 fathom contour is marked by the fairway buoy which carries a flashing red light. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and by a Protectorate treaty with the Sultan of Sokotra, which may both be regarded as outposts of Aden, and are under the political jurisdiction of the Resident.

The Arab chiefs of the hinterland of Arabia are nearly all stipendiaries of the British Government. Colonel Wahab and Mr. G. H. Fitzmaurice, of the Constantinople Embassy, were appointed in 1902, as Commissioners to delimitate the frontier between Turkish Arabia and the British protectorate around Aden. A convention was signed in 1905 settling details, the frontier line being drawn from Shaikh Murad, a point of the Red Sea coast opposite Perim, to the bank of the river Bana, the eastern limit of Turkish claims, at a point some 29 miles north-east of Dthala, and thence north-east to the great desert. The area left within the British Protectorate was about 9,000 square miles. The arrangement gave to Turkey Cape Bab-el-Mandeb, which forms the Arabian bank of the eastern channel past Perim into the Red Sea. A sanitorium and small British garrison used to be maintained at Dthala, which is 7,700 feet high, but the garrison was withdrawn in 1906, Lord Morley explaining this step as being in accordance with the policy stated in the House of Lords in 1903,—that His Majesty's Government had never desired to interfere with the internal and domestic affairs of the tribes on the British side of the boundary, but had throughout made it plain that they would not assent to the interference of any other Power with those affairs. Affairs in this respect have been disarranged considerably by the war.

British Policy.

There has been much criticism of a policy under which Aden has failed to advance with the same progressive strides which have marked the development of other British dependencies. It is said that the former Persian possessors of Aden built its wonderful water tanks, and the Arabs made an aqueduct 20 miles long, while the British have done nothing except mount guns to protect their coal yards. Trade, it is argued, flourishes because this is a natural emporium of commerce, but not because of the attention its needs get from Government. Lord Roberts, writing on this point a few years ago, said: "It is not creditable to British rule to make use of a dependency like Aden for selfish purposes of political necessity without attempting to extend the benefits of civilised Government to the neighbouring native tribes, especially when those tribes are living under the aegis of the British Crown. The Persians, the Turks and even the Arabs did more for Aden in their time than we have done during our seventy years' occupation........Aden has always suffered under the disadvantage of being an appanage of the Bombay Presidency, with which it has neither geographical, racial nor political affinity. Probably the best solution of the matter would be to hand over the place to the Colonial Office, relieving the Government of Bombay of a charge which is only looked upon as an incubus." This question has now been finally decided. As explained below, His Majesty's Government are now responsible for the military and political administration of Aden, the Government of India remaining responsible for the internal administration of the settlement management has no doubt resulted in a dual control. But the change has been found necessary because Aden has assumed a far wider importance in Imperial Communications from that of a port of call in the voyage to India and because it is hoped that the cost of its defence might be reduced if it was treated as a part of the Middle East.

Language.

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly returned as Arabs and Shaikhs. The Somalis from the African coast and Arabs do the hard labour of the port. So far as the settlement is concerned the chief industries are salt and cigarette manufacture. The crops of the tribal low country adjoining are jowar, sesamum, a little cotton, madder

a bastard saffron and a little indigo. In the hills, wheat, madder, fruit, coffee and a considerable quantity of wax and honey are obtained. The water supply forms the most important problem. Water is drawn from four sources—wells, aqueducts, tanks or reservoirs and condensers. This problem of water supply appears to have been now nearly solved. An artesian supply of fresh water has been obtained at Sheikh Othman. Water from a depth of some 1,600 feet is flowing from the bore hole at the surface and the supply is capable of giving one hundred thousand gallons per day by means of pumps.

The discovery of artesian suppliesof fresh water at Aden by the Bombay Government has removed one of the greatest hardships to the growth of that very important sea port, frequently referred to as the Gibralter of the East and should cause much satisfaction to the residents, since the cost of sweet water hitherto only obtainable in normal years by distillation has been about fifty times higher than the water rates, usually payable to Municipalities in India. The urgent need of a fresh water supply at Aden can be realised the better when it is stated that it has a population of some 40,000 souls and that over 1,500 vessels enter the port annually, carrying on trade amounting to from 15 to 20 millions sterling per year. It is the only port at which ships call for water between the Suez Canal and India or Ceylon and upto the present time, this supply has been met by the costly process of condensing sea water.

Administration.

The administration of Aden was in former times directly under the Government of Bombay. In 1920, the political control of Aden, which was exercised during the period of the war by the High Commissioner of Egypt, was retransferred to the Political Resident, Aden, who was to be directly responsible to the Foreign Office. In 1921, this responsibility was taken over by the Colonial Office. The future of the Protectorate has been the subject of no little discussion and various proposals have been put forward. At one time the idea that it should be transferred to the Colonial Office was seriously entertained. The proposals met with warm disapproval, from the important Indian community in Aden whose views were supported in India. There has been much friction between India and the Colonial Office over the status of Indians in theDominions and some of the Crown Colonies, and the lukewarmness of the Colonial Office in protecting their rights was much resented. Therefore transfer to the Colonial Office was opposed as transfer to an unknowing and unsympathetic administration. On the 11th July 1922 the Under-Secretary of State for the Colonies stated in the House of Commons that there was no prospect of the Colonial Office taking over the control of Aden in the near future. Deliberations between the Government of India and the Imperial Government reached their conclusion during 1927 and the decisions finally taken were announced by the Government of India in the Legislative Assembly assembled in Delhi during the Budget debates in March, 1927. The new arrangements came into operation on April 1st, 1927. Under the new conditions, the Imperial Government are responsible for the military and political situation in Aden and its Hinterland. The settlement of Aden itself, which is to a large degree peopled by Indians, remains under the Government of India. The financial settlement required by this division of authority provides for the payment by India to Imperial Revenues of £250,000 a year for three years and thenceforward of £150,000 a year. The larger amount is considerably less than the annual expenditure falling upon Indian revenues under the former system of control.

The administration is conducted by a Resident, who is assisted by four Assistants. The Resident is also ordinarily General Officer Commanding and has hitherto usually been an officer selected from the Indian army, as have his assistants. Since the introduction of the dual control referred to above, the Resident's post is to be held alternately by an Office of theIndian Service and by a member of the Colonial service. The Court of the Resident is the Colonial Court of Admiralty under Act XVI of 1891, and its procedure as such is regulated by the provisions of the Colonial Courts of the Admiralty Act 1890 (53 and 54 Vicc, Chapter 27). The laws in force in the settlement are generally speaking those in force in the Bombay Presidency, supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1888. The principal business of the Port Trust has been the deepening of the harbour, so as to allow vessels of all sizes to enter and leave at all states of the tide. The Aden police force consists of land and harbour police who number 322 and 54 respectively. There are hospitals and dispensaries in both Aden and Perim, in addition to the military institutions of this character. The garrison comprises a troop of engineers, three companies of garrison artillery, one battalion of British infantry, two companies of sappers and miners and one Indian regiment. Detachments from the last named are maintained at Perim and Shaikh Othman respectively.

Climate.

The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 98 in June, with variations up to 102. The lulls between the monsoons, in May and September, are very oppressive. Consequently, long residence impairs the faculties and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next. But Aden is exceptionally free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from ½ inch to 8½ inches, with an irregular average of 3 inches.

Political Resident Lieut-Col. Sir Stewart Symes, C.M.G., D.S.O.

2. Major T. C. W. Fowle.
3. ,, G. T. Fisher.
4. Captain G. A. Falconer.

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the Company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the lineal precursor of the Secretary of State for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State.

Until the Reform Act of 1919 came into force the Secretary of State had the unqualified power to give orders to every officer in India, including the Governor-General, and to superintend, direct and control all acts, operations and concerns relating to the government or revenues of India. In the relations of the Secretary of State with the Governor-General in Council no express statutory change was made, but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified; only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility; others can be performed only in consultation with his Council, and for some of these the concurrence of a majority of the members of his Council voting at a meeting is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council, and he has fuller power than in the past to prescribe the manner in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement, the law now providing that there shall be a meeting at least once in every month.

The India Council.

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to Parliament, re-appoint a member for another five years. Half the Council must be persons who have served or resided in India for at least ten years, and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of Indian members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, and are subject to the ordinary Home Civil Service rules in all respects.

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total net cost including pensions has been about £250,000 per annum. In conformity with the spirit of the 1919 Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and the cost of the controlling and political functions exercised in Whitehall is also met from British revenues, while agency functions alone are chargeable to Indian revenues.

The High Commissionership.

The financial readjustment has been accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India in the United Kingdom with necessary establishments. From October 1st, 1920, the High Commissioner took over control of the purchase of Government Stores in England and the Indian Students Branch, together with the supervision of the work of the Indian Trade Commissioner. The further development of the functions and powers of the High Commissioner have included such agency work as the payment of Civil leave allowances and pensions, the recruitment of technical officers, supervision of I. C. S. and Forest probationers after first appointment, the making of arrangements for officers on deputation or study leave, repatriation of destitute lascars, sale of Government of India publications, etc. The staff of the Stores Department is located at the Depot off the Thames in Belvedere Road, Lambeth. The High Commissioner and the rest of the staff, at 42, 44 and 46, Grosvenor Gardens, S.W. 1, but a new "India House" is to be erected for the High Commissioner in Aldwych to the designs of Sir Herbert Baker at an estimated cost of £300,000.

Parliament has set up since 1920 a Joint Standing Committee on Indian affairs consisting of eleven members of each House. The purpose is to keep Parliament in closer touch with Indian affairs and to refer to the Committee draft rules and also Parliamentary Bills after they have received a second reading.

INDIA OFFICE.

Secretary of State.

The Right Hon. Viscount Peel.

Under-Secretaries of State.

Sir Arthur Hirtzel, K.C.B.
The Rt. Hon. Earl Winterton.

Deputy Under-Secretary of State.

Sir Malcolm Seton, K.C.B.

Assistant Under-Secretaries of State.

Sir Louis Kershaw, K.C.S.I., C.I.E.
S. F. Stewart, C.S.I., C.I.E.

Council.

Frederick Craufurd Goodenough.
Sir William H. H. Vincent, G.C.I.E., K.C.S.I.
General Sir Havelock Hudson, G.C.B., K.C.I.E.
Sir Reginald A. Mant, K.C.I.E., C.S.I.
Sir Muhammad Rafique.
Sir Robert Erskine Holland, K.C.I.E., C.S.I., C.V.O.
Sir Campbell W. Rhodes, C.B.E.
S. N. Mallik, C.I.E.
Dr. R. P. Paranjpye, M.A., B. Sc.
Sir Henry Wheeler, K.C.S.I., K.C.I.E.
Sir W. S. Marris, K.C.S.I., K.C.I.E.
Clerk of the Council, S. F. Stewart, C.S.I., C.I.E.
Deputy Clerk of the Council, F. W. H. Smith.
Private Secretary to the Secretary of State, D. T. Monteath, O.B.E.
Assistant Private Secretaries, J. P. Gibson and G. H. G. M. Cartwright.
Political A.-D.-C. to the Secretary of State, Lieut.-Col. S. B. A. Patterson, C.S.I., C.I.E.
Asst. to Ditto.—O. Gruzelter, M.V.O.
Private Secretary to Sir A. Hirtzel, R. E. Field.
Private Secretary to Earl Winterton, E. P. Donaldson..

Heads of Departments.

SECRETARIES.

Financial, W. Robinson, C.B.E.; C.H. Kisch, C.B.
Public and Judicial, J. E. Ferard, C.B.E.
Military, Field Marshal Sir Claud W. Jacob, G.C.B., K.C.S.I., K.C.M.G.
Personal Assistant.—Col. W. W. Chitty, C.M.G.
Ditto (Joint), S. K. Brown, C.V.O.
Staff Officer attached, Col. J. C. Freeland, C.S.I.
Political and Secret, L. D. Wakely, C.B.
Economic and Overseas, E. J. Turner, C.B.E.
Services and General and Establishment Officer—P. H. Dumbell.
Director-in-Chief of the Indo-European Telegraph, Public Works Department, M. G. Simpson C.S.I.
Asst. to Ditto.—W. Sutherland, C.S.I.
Accountant-General, Sidney Turner, C.B.E., F.I.A. *also Director of Funds and Official Agent to Administrators-General in India.*
RECORD DEPARTMENT.—*Superintendent of Records*, W. T. Ottewill, M.B.E.
Auditor, W. A. Sturdy, C.B.E.

Miscellaneous Appointments.

Government Director of Indian Railway Companies. W. Stantiall, C.I.E.
Asst to Ditto. W. Gauld.
Librarian, Fredk. C. A. Storey, M.A.
Asst. Ditto. H. N. Randle.
Sub-Librarian, J. W. Smallwood.
President of Medical Board for the Examination of Officers of the Indian Services and Adviser to the Secretary of State on Medical matters, Major-General J. B. Smith, C.B., C.I.E.
Members of the Medical Board, Lt.-Col. Sir L. Rogers, C.I.E., F.R.S. Lieut. Col. E.V. Hugo, C.M.G.
Legal Adviser and Solicitor to Secretary of State, Sir Edward Chamier, K.C.I.E.
Asst. Solicitor, F. R. Marten.
Information Officer, E. Haward.
Inspector of Military Equipment and Clothing, Col. H. E. Garstin, D.S.O., R.A. (retd.)
Ordnance Consulting Officer, Col. C. J. D. Freeth.
Asst to Ditto. Capt R. C. Lyons.

HIGH COMMISSIONER'S OFFICE.

(42, Grosvenor Gardens.)

The High Commissioner, Sir A. C. Chatterjee, K.C.I.E.
Secretary, J. C. B. Drake, C.I.E., O.B.E.
Chief Accountancy Officer, G. H. Stoker, O.B.E.
Personal Assistant, G. F. Drayson.
Private Secretary.—W. M. Mather;
General Department: Assistant Secretary, R. E. Montgomery.
Indian Trade Commissioner, H. A. F. Lindsay, C.I.E., C.B.E.
Deputy Ditto, S. N. Gupta, I.C.S.
Assistant Secretary Education Department, T. Quayle, D. Litt. (Lond.).

Store Department Depot at Belvedere Road, Lambeth, S. E. 1.

Director-General. Lieut.-Col. S. S. W. Paddon, C.I.E., C.I.M.E.
Deputy Director, R. R. Howlett.
Controller of Inspection, F. E. Benest, M.I.E.E.

Secretaries of State for India.

Viscount Peel	1922
Lord Olivier	1924
Lord Birkenhead	1924
Viscount Peel	1928

The area enclosed within the boundaries of India is 1,773,168 square miles, with a population of 315,132,537 of people—nearly one-fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Indian States is 675,267 square miles with a population of seventy millions. The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 19 square miles, and the Simla Hill states, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe.

Relations with the Paramount Power.

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India, that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions; and while we will permit no aggression on our dominions or our rights to be attempted with impunity, we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own; and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great taluqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene, to prevent gross misgovernment, or to carry on the administration during a long minority; but always with the undeviating intention of restoring the territories as soon as the necessity or intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Indian States.

The rights and obligations of the Indian States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Indian States. The inhabitants of the Indian States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to an Indian State must be handed over to it by its authorities; they cannot be arrested by the police of British India without the permission of the ruler of the State. The Indian Princes have therefore a suzerain power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases, applied to maritime states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States.

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other states; the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Indian States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute, logic and public opinion have endorsed the principle which Lord Canning set forth in his minute of 1860, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge

subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where cantonments exist in an Indian State, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers.

The powers of the British Government are exercised through Political Officers who, as a rule, reside in the states themselves. In the larger states the Government is represented by a Resident, in groups of states by an Agent to the Governor-General, assisted by local Residents or Political Agents. These Officers form the sole channel of communication between the Indian States and the Government of India and its Foreign Department, with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose district they lie. All questions relating to the Indian States are under the special supervision of the Supreme Government, and in the personal charge of the Governor-General.

Closer Partnership.

Events have tended gradually to draw the Paramount Power and the Indian States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs, first by the employment of tutors, and afterwards by the establishment of special colleges for the purpose. These are now established at Ajmere, Rajkot, Indore and Lahore. The Imperial Cadet Corps, whose headquarters are at Dehra Dun, imparts military training to the scions of the ruling chiefs and noble families. The spread of higher education has placed at the disposal of the Indian States, the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Indian States, approximating more closely to the British ideal. Most of the Indian States have also come forward to bear their share in the burden of Imperial defence. Following on the spontaneous offer of military assistance when war with Russia appeared to be inevitable over the Penjdeh incident in 1885, the states have raised a portion of their forces up to the standard of the troops in the Indian Army. These were until recently termed Imperial Service Troops; but are now designated Indian State Forces; they belong to the States, they are officered by Indians; but they are inspected by a regular cadre of British officers under the general direction of an Inspector-General. Their numbers are approximately 22,000 men; their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs, on the Frontier and in China, in Somaliland and in the Great War. Secure in the knowledge that the Paramount Power will respect their rights and privileges, the Ruling Chiefs have lost the suspicion which was common when their position was less assured, and the visits of the Prince of Wales in 1875, of the Prince and Princess of Wales in 1905-06, and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Indian States. The new policy was authoritatively laid down by Lord Minto, the then Viceroy, in a speech at Udaipur in 1909 when he said:—

"Our policy is with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power, such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of suzerainty. The foundation stone of the whole system is the recognition of identity of interests between the Imperial Government and Durbars and the minimum of interference with the latter in their own affairs.

HYDERABAD.

The Nizam exercises full sovereignty within his dominions, grants titles and has the power of life and death over his subjects. Before 1919, the Government consisted of a Prime Minister responsible to the Nizam, with Assistant Ministers, but in this year, an Executive Council consisting of seven ordinary and one extraordinary member under a President was established. A legislative Council consisting of 20 members of whom 12 are official, 6 non-official and extraordinary is responsible for making laws. The administration is carried on by a regular system of departments on lines similar to those followed in British India. The state is divided into two divisions—Telingana and Mahratwads—15 Districts and 103 Talukas. Local Boards are constituted in each District and Taluka. The State maintains its own currency which consists of gold and silver coins and a large note issue. The rupee, known as the Osmania Sicca, exchange with the British Indian rupee at an average ratio of 116-10-8 to 100. There is a State postal

service and stamps for internal purposes. The Nizam maintains his own army consisting of 19,523 troops of which 5,876 are classed as regular troops and 12,580 as irregular. In addition to these, there are two battalions of Imperial Service Troops, 1,067 strong.

FINANCE.—Hyderabad State is far the wealthiest of the Indian States, having a revenue in its own currency of over 7½ crores, which is approximately the same as that of the Central Provinces and Bihar and Orissa and double that of any other State. After many vicissitudes, its finances are at present in a prosperous condition and it enjoys a large annual surplus of revenue from which a reserve of 15 crores has been built up. This is being used partly as a sinking fund for the purchase of the State railways and partly for the development of the resources of the State. The budget estimates for the present year show a revenue of 768 lakhs under service heads and an expenditure of 734 lakhs, inclusive of large sums set aside for development, famine insurance and reserve for re-organisation and development. The capital expenditure programme provides for an expenditure of 136 lakhs, which includes 63 lakhs for the large irrigation project known as "Nizam Sagar" and other sanctioned projects and 67 lakhs for the completion of the Kazipet-Bellarshah line, which is the last link in the direct route between Madras and Delhi, and for the construction of feeder lines. The year opened with a cash balance of 495 lakhs which is expected to increase to about 520 lakhs by the end of the year. The Government loans stand at 106½ for short term and 116 for long term issues.

PRODUCTION AND INDUSTRY.—The principal industry of the State is agriculture, which maintains 57 per cent. of the population. The common system of land tenure is ryotwari. About 55 per cent. of the total area is directly administered by the State. The rest consists of private estates of His Exalted the Nizam, which comprise about one-tenth of the total area of the State, and the estates of the Jagirdars and Paigah nobles. The total land revenue is over 3 crores. The principal food crops are millet and rice; the staple money crops cotton, which is grown extensively on the black cotton soils, and oilseeds. Hyderabad is well-known for its Gaorani cotton which is the longest staple indigenous cotton in India. The total area under cotton exceeds 3 million acres. Hyderabad possesses the most southerly of the Indian coal measures and the whole of southern India is dependent on it for such coal as is transported by rail. The chief mine is situated at Singareni, which is not far from Bezwada junction on the Calcutta-Madras line. The chief manufacturing industry is based on the cotton produced in the State. There are five large mills in existence and others are likely to be established, while about one-third of the cloth worn in the Dominions is produced on local hand-looms. There are about 250 ginning and pressing factories in the cotton tracts and also a number of tanneries and flour mills. The Shahabad Cement Co. which has been established at Shahabad on the Great Indian Peninsula Railway line, not far from Wadi, supplies the whole of southern India with cement and has at present an annual output of about 40,000 tons.

TAXATION.—Apart from the land revenue which as stated above brings in about 3 crores, the main sources of taxation are excise and customs. The receipts from each are estimated for the present year at 159 and 132 lakhs respectively. After these come interest on investments (43 lakhs), railways (33 lakhs) and Berar rent (29 lakhs). The customs revenue is derived from an *ad valorem* duty of 5 per cent. on all imports and exports.

COMMUNICATIONS.—One hundred and thirty-seven miles of broad gauge line from Bombay to Madras traverse the State. At Wadi, on this section, the broad gauge system of the Nizam's Guaranteed State Railway takes off and running east through Hyderabad City and Warangal reaches the Calcutta-Madras line at Bezwada, a total length of 330 miles. From Kazipet, near Warangal on this line, a new link to Bellarshah strikes, north. Trains are now running as far as Ramagundam, a distance of nearly 58 miles, and the rest of the line will be opened during the present year. From Secunderabad, the metre gauge Godaveri Valley railway runs north-west for 386 miles to Manmad on the main line of the Great Indian Peninsula Railway to Calcutta. A metre gauge line also runs south from Secunderabad through Mahbubnagar nearly to the border and is now being linked up with Kurnool on the Madras and Southern Mahratta Railway. Thus, with branch lines, there are now 525 miles of broad gauge and 581 of the metre gauge in the State. The Barsi Light Railway also owns a short extension from Kurdwadi on the Bombay-Madras line to Latur in Osmanabad District. The Nizam's Guaranteed State Railway is worked at present by a Company, but H. E. H.'s Government has provided a large proportion of the capital outlay and has the option of purchase at stated intervals, the earliest of which is in the year 1934. The road system is incomplete at present, but is being rapidly extended on a well-considered programme.

EDUCATION.—The Osmania University at Hyderabad imparts instruction in all the faculties through the medium of Urdu, English being taught as a compulsory language and it has one First Grade College and four Intermediate Colleges. The Nizam College at Hyderabad (first grade), is, however, affiliated to the Madras University. In 1924-25 the total number of Educational Institutions rose from 3,556 (1918-19) to 4,001, the number of Primary Schools in particular having been largely increased.

EXECUTIVE COUNCIL:—Raja Rajayan Rajah Sir Kishen Pershad Maharaja Bahadur, Yaminus Saltanath, G.C.I.E., *President*; Nawab Waliud Dowlah Bahadur, *Education, Medical and Military Departments Member*; Nawab Nizamat Jung Bahadur, C.I.E., O.B.E., *Political Member;* Nawab Hydar Nawaz Jung Bahadur, *Finance and Railway Member*; Lt.-Col. Chenivix Trench, C.I.E., O.B.E., *Revenue and Police Member*; Dr. Nawab Sir Amin Jung Bahadur, K.C.I.E., C.S.I., LL.D., *Law Member*; Nawab Aqeel Jung Bahadur, *Public Works Member.*

BRITISH RESIDENT.—The Hon'ble Sir William P. Barton, K.C.I.E., C.S.I.

MYSORE.

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It is naturally divided into two regions of distinct character ; the hill country (the malnad) on the west and the wide spreading valleys and plains (the maidan) on the east. The State has an area of 29,469 square miles excluding that of the Civil and Military Station of Bangalore and a population of 5,978,892 of whom over 92 per cent. are Hindus. Kannada is the distinctive language of the State.

HISTORY.—The ancient history of the country is varied and interesting. Tradition connects the table land of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. Coming down to historical times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B.C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A.D. Mysore was ruled by three dynasties, the north-western portion by the Kadambas, the eastern and northern portions by the Pallavas and the central and the southern portions by the Gangas. In the eleventh century, Mysore formed part of Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas, an indigenous dynasty with its capital at Halebid. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar empire. At the end of the fourteenth century Mysore became associated with the present ruling dynasty. At first tributory to the dominant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century the real sovereignty passed into the hands of Hyder Ali and then his son, Tippu Sultan. In 1799, on the fall of Seringapatam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wadayar Bahadur III. Owing to the insurrections that broke out in some parts of the country the management was assumed by the British Government in 1831. In 1881 the State was restored to the dynasty in the person of Sri Chamarajendra Wadayar Bahadur under conditions and stipulations laid down in the Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer, K.C.S.I., as Dewan, brought Mysore to a State of great prosperity. He died in 1894, and was succeeded by the present Maharaja Colonel Sir Sri Krishnarajendra Wadayar Bahadur, G.C.S.I., G.B.E., who was installed in 1902. In November 1913 the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore.

ADMINISTRATION.—The City of Mysore is the Capital of the State, but Bangalore City is the Administrative headquarters. His Highness the Maharaja is the ultimate authority in the State, and the administration is conducted under his control, by the Dewan and three Members of Council. The Chief Court consisting of three Judges is the highest Judicial tribunal in the State. There are two constitutional Assemblies in the State—the Representative Assembly and the Legislative Council. The Representative Assembly was established in 1881 by an executive order of Government, and its powers and functions have been increased from time to time by similar orders of Government. Under the scheme of constitutional developments announced in October 1923 the Representative Assembly has been placed on a statutory basis and given a definite place in the constitution by the promulgation of the Representative Assembly Regulation XVIII of 1923. The franchise has been extended and the disqualification of women on the ground of sex, from exercising the right to vote has been removed. The privilege of moving resolutions on the general principles and policy underlying the budget and on matters of public administration has been granted in addition to those already enjoyed of making representations about wants and grievances and of interpellating Government. The Assembly is also to be consulted on all proposals for the levy of new taxes and on the general principles of all measures of legislation before their introduction into the Legislative Council. Besides the Budget Session (formerly Birthday Session) and the Dasara Session, provision has been made for one or more special sessions of the Assembly to be summoned by Government when the State or public business demands it.

The strength of the Legislative Council has been raised from 30 to 50, of whom 20 are official and 30 are non-official members. The Council which exercised the privileges of interpellation, discussion of the State Budget and the moving of the resolutions on all matters of public administration is, under the reformed constitution, granted the powers of voting on the demands for grants. The Dewan is the Ex-officio President of both the Representative Assembly and the Legislative Council.

The Legislative Council has also a Public Accounts Committee which examines all audit and appropriation reports and brings to the notice of Council all deviations from the wishes of the Council as expressed in its Budget grant.

STANDING COMMITTEES.—With a view to enlarge the opportunities of non-official representatives of the people to influence the every day administration of the State three Standing Committees consisting of Members of the Representative Assembly and the Legislative Council, have been formed, one in connection with Railway, Electrical and P. W. Departments, one in connection with Local Self-Government and the Departments of Medicine, Sanitation and Public Health and the third in connection with Finance and Taxation.

All the important branches of the administration are controlled by separate Heads of Departments. The combatant strength of the Military Force at the end of 1927-28 was 2,268 of which 501 were in the Mysore Lancers, 130 in the

Mysore Horse, 98 in the Transport Corps, and the remaining 1,539 in the Infantry. The total annual cost is about 18 lakhs of rupees. The cost of the Police Administration during 1927-28 was about 16 lakhs.

FINANCES.—The actual total receipts and disbursements charged to Revenue for the past five years together with the revised budget estimate for 1927-28 and budget for 1928-29 were as below :—

Year.	Receipts.	Disbursements.	Surplus.	Deficit.
	Rs.	Rs.	Rs.	Rs.
1922-23	3,30,70,534	3,26,47,897	+22,637	
1923-24	3,32,57,262	3,32,02,060	+55,202	
1924-25	3,39,62,290	3,39,35,870	+26,420	
1925-26	3,46,36,960	3,46,02,636	+34,324	
1926-27 (Accts.) ..	3,38,69,349	3,47,39,906	....	—8,70,557
1927-28 (revised) ..	3,49,72,000	3,41,21,000	+51,000	
1928-29 (budget). ..	3,55,91,000	3,55,48,000	+43,000	

AGRICULTURE.—Nearly three-fourths of the population are employed in agriculture, and the general system of land tenure is ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugar cane, and the chief fibres are cotton and sun-hemp. Nearly fifty thousand acres are under mulberry, the silk industry being the most profitable in Mysore next to Gold Mining. A Superintendent of Sericulture has been appointed and the Sericultural Department affiliated to the Industries and Commerce Department. Arrangements are being made for the supply of disease-free seed, and a central and five taluk popular schools have been doing good work. The Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations, investigations, and experiments. There are five Government Agricultural Farms at Hebbal, Babbur, near Hiriyur, Marthur, Nayarapally and the coffee experimental Station at Balehonnur. A live-stock section has been organised which has been taking necessary steps for the improvement of live-stock.

INDUSTRIES AND COMMERCE.—A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. The sandal-wood oil factory started on an experimental basis is now working on a commercial scale. A factory is working at Bangalore, and another at Mysore. A large plant at a cost of more than 170 lakhs of rupees has been constructed at Bhadravathi for purposes of manufacturing charcoal, pig-iron, distilling wood-alcohol, and developing subsidiary industries. The works are on the borders of an extensive forest area and practically at the foot of the hills containing rich deposits of iron, manganese and bauxite, and are not far from the Gersoppa Water Falls estimated to be capable of producing 100,000 horse-power of electric energy.

HYDRO—ELECTRIC AND IRRIGATION WORKS.—The river Cauvery in its course through the State, possesses a natural fall of about 380 feet near the island of Sivasamudram, and this fall was harnessed in the year 1902 for the development of electric power, to the extent of about 12,000 H. P. for supplying mainly to the Kolar Gold Mining Companies and incidentally for lighting the cities of Mysore and Bangalore. In course of time, the demand on the power station increased and with a view to protecting the existing supply and augmenting the generation of additional power to meet the growing demands, the "Krishnarajasagara Reservoir" called after the name of the present Maharaja was constructed. The storage from the reservoir besides enabling the generation of electric power up to 46,000 H. P. will also bring under irrigation about 1,20,000 acres of land situated in an area subject to more or less continuous drought. The new Canal Works are now in progress, and the main Canal is named the "Irwin Canal" after the present Viceroy. Full advantage is being taken of the available electric power for small industries and the electrification of towns and lift irrigation.

EDUCATION.—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central, Engineering and Medical Colleges at Bangalore and the Maharaja's and Maharani's Colleges at Mysore, with headquarters at Mysore. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. The Maharani's College at Mysore is a College for Women.

With the introduction of compulsory education in select centres and the increase in the number of village schools, primary education has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering and other technical subjects. There were altogether 8,212 institutions on 31st March 1927. This gives one school to every 3.59 square miles of the area and to every 714 of the population.

Resident in Mysore and Chief Commissioner of Coorg.—The Hon. Mr. G. E. Pears, C.S.I., C.I.E. *(on leave)*

Mr. L. M. Crump, C.I.E., I.C.S., Acting.

Dewan.—Amin-ul-Mulk Mirza Mahomed Ismail, C.I.E., O.B.E.

Members of the Executive Council.—Rajkaryaprasakta Diwan Bahadur, M. N. Krishna Rao, B.A., First Member of Council, C. S. Balasundaram Iyer, B.A., 2nd Member of Council and Mr. K. Mutthan, B.A., Third Member of Council.

BARODA.

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four district blocks: (1) the southern district of Navsari near the mouth of the Tapti river, and mostly surrounded by British territory; (2) central district, North of the Narbada, in which lies Baroda, the capital city; (3) to the North of Ahmedabad, the district of Kadi; and (4) to the West, in the Peninsula of Kathiawar, the district of Amreli, formed of scattered tracts of land. The area of the State is 8,135 square miles; the population is 2,126,522 of whom over four-fifths are Hindus.

History.—The history of the Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Pilaji Gaikwar, who may be considered as the founder of the present ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Pilaji regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1734, since then it has always been in the hands of the Gaikwars; but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1753, after which the country was divided between the Gaikwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I. Fattesing Rao, Manaji Rao and Govind Rao. The last died in 1800, and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Baji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II was Gaikwar, differences arose between the two Governments, which were settled by Sir James Carnac, Governor of Bombay, in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule, the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao, who ascended the *Gadi* in 1856, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident, was not proved. Sayaji Rao III, a boy of 13 years of age, who was descended from a distant branch of the family, was adopted as heir of Khande Rao in 1875 and is the present Gaikwar. He was invested with full powers in 1881.

Administration.—An executive council consisting of the principal officers of the State carries on the administration, subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided into four *prants*, each of which is sub-divided into *Mahals* and *Peta Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court, appeals lie in certain cases, to the Maharaja, who decides them on the advice of the Huzur Nyaya Sabha. The State Army consists of 5,086 Regular forces and 3,806 Irregular forces.

Finance—In 1926-27, the total receipts of the State were Rs. 2,46,61,665 and the disbursements Rs. 2,04,19,363. The principal Revenue heads were:—Land Revenue, Rs. 1,16.64,500; Abkari, Rs. 28,85,548; Opium, Rs. 5,60,735; Railways, Rs. 7,97,345; Interest, Rs. 13,65,153; Tribute from other States, Rs. 2,30,028. British Currency was introduced in 1901.

Production and Industry.—Agriculture and pasture support 63 per cent. of the people. The principal crops are rice, wheat, gram, castor-oil, rapeseed, poppy, cotton, san-hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on *ryotwari* tenure. The State contains few minerals, except sandstone, which is quarried at Songar, and a variety of other stones which are little worked. There are 73 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 750 Co-operative Societies in the Baroda State.

Communications.—The B. B. & C. I. Railway crosses part of the Navsari and Baroda *prants*, and the Rajputana-Malwa Railway passes through the Kadi *prant*. A system of branch lines has been built by the Baroda Durbar in all the four *prants*, in addition to which the Tapti Valley Railway and the Baroda-Godhra Chord line (B. B. & C. I.) pass through the State. The Railways constructed by the State are about 669 miles in length. Good roads are not numerous.

Education.—The Education Department controls 2,996 institutions of different kinds, in 76 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes. The State is "in a way pledged to the policy of free and compulsory primary education." It maintains a system of rural and travelling

libraries. Ten per cent. of the population is returned in the census as literate. Total expense on Education is Rs. 32,88,520.

CAPITAL CITY.—Baroda City with the cantonment has a population of 94,712. It contains a public park, a number of fine public buildings, palaces and offices; and it is crowded with Hindu temples. The cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army. An Improvement Trust has been formed to work in Baroda City and has set itself an ambitious programme.

RULER.—His Highness Farzand-i-Khas-i-Dowlat-i-Englishia Maharaja Sir Sayaji Rao Gaekwar Sena Khas Khel, Samsher Bahadur, G.C.S.I., G.C.I.E., LL.D., Maharaja of Baroda.

Resident.—Lt.-Col. R. J. C. Burke (*Offg.*).

Dewan.—Rao Bahadur V. T. Krishnamachari, C.I.E.

BALUCHISTAN AGENCY.

In this Agency lies the State of Kalat with its feudatory State of Las Bela.

Kalat is bounded on the North by the Chagai district, on the East by Sindh and the Marri-Bugti tribal territories, on the South by the Arabian Sea and on the West by Persia.

The State includes the tribal territories of the Chiefs of the Brahui Confederacy of which the Khan of Kalat is Head. The divisions of the State are, Sarawan or the Highlands, Jhalawan or the Lowlands, Kachhi, Makran, the khanate of Kharan and the feudatory State of Las Bela. The inhabitants are for the most part Brahuis or Baloch, both being Muhammadans of the Sunni sect. The area of Kalat with Las Bela is 80,410 sq. miles. The country is sparsely inhabited, the total population being about 379,000.

The relations of Kalat with the British Government are governed by the treaties of 1854 and 1876, by the latter of which the independence of Kalat was recognized, while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam, at present a retired officer of the British service. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan, and exercises general political supervision over the State. The revenue of the State is about Rs. 17,60,000, out of which the Khan retains a civil list of Rs. 3,50,000 per annum. The present Khan is His Highness Beglar Begi Sir Mir Mahmud Khan of Kalat, G.C.I.E. He was born in 1864.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sind, and the greater part of the State consists of the valley and the delta of the Purali river. Area 7,132 square miles; population 50,696, chiefly Sunni Muhammadans. The estimated average revenue is about Rs. 3,80,000. The Chief of Las Bela, known as the Jam, is bound by agreement with the British Government to conduct the administration of his State in accordance with the advice of the Governor-General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir, to whose advice he is subject and who assists him generally in the transaction of State business.

Agent to the Governor-General for Baluchistan.—Hon'ble Lt.-Col. H. B. St. John, C.I.E., C.B.E.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial circle with a total area of about 131,698 square miles, which includes 19 Indian States, one chiefship, and the small British district of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior, while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Indian States and Chiefship 17 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Indian States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups:—Bikaner and Sirohi in direct relations with the Agent to the Governor-General; Eastern Rajputana Agency States (Bharatpur, Dholpur Karnali, Alwar and Kotah), Haraot and Tonk Agency, 4 States (Bundi, Jhalawar, Shahapura and Tonk); Jaipur Residency, 2 States (principal State, Jaipur); Mewar Residency, and Southern Rajputana States Agency, 3 States (principal State Banswara) and the Kushalgarh Chiefship; Western Rajputana States Residency, 2 States (principal State, Marwar).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-west of the hills is, as a whole, sandy, ill-watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravalli Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS.—The total length of railways in Rajputana is 1,576 miles, of which 73 are the property of the British Government The B. B. & C. I. (Metre-gauge) (Government)

runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS.—Over 50 per cent. of the population are engaged in some form of agriculture; about 20 per cent. of the total population are maintained by the preparation and supply of material substances; personal and domestic service provides employment for about 5 per cent. and commerce for 2½ per cent. of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of rent or as cultivators. By reason of their position as integral families of pure descent, as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India; and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with, one of these Rajput stocks.

The population and area of the States are as follows:—

Name of State.	Area in square miles.	Population in 1921.
In direct Political relations with A. G. G.—		
Bikaner	23,315	659,685
Sirohi	1,958	186,639
Mewar Residency—		
Udaipur	12,756	1,380,063
Southern Rajputana States Agency—		
Banswara	1,606	190,362
Dungarpur	1,447	189,272
Partabgarh	886	67,110
Kushalgarh .. .. *(Chiefship)*	340	29,162
Western State Residency—		
Jodhpur	34,963	1,841,642
Jaisalmer	16,062	67,652
Jaipur Residency—		
Jaipur	15,579	2,338,802
Kishangarh	858	77,734
Lawa	19	2,262
Haraoti-Tonk Agency—		
Bundi	2,220	187,068
Tonk	2,553	287,898
Jhalawar	810	96,182
Shahpura	405	48,130
Eastern States Agency—		
Bharatpur	1,983	496,437
Dholpur	1,155	229,734
Karauli	1,242	133,730
Alwar	3,141	701,154
Kotah	5,684	630,060

Udaipur State (also called Mewar) was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by His Highness the Maharana's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chitor Railway, 697 miles north of Bombay. The present ruler is His Highness Maharajadhiraj Maharana Sir Fateh Singhji Bahadur, G.C.S.I., G.C.I.E., G.C.V.O., who was born in 1849 and succeeded in 1884. He is the head of the Seesodia Rajputs and is the Premier Chief. The administration is carried on by the Maharana, assisted by Shriman Maharaj Kumar Sir Bhopal Singhji Bahadur, K.C.I.E., to whom His Highness has delegated certain powers. The revenue and expenditure of the State are now about 45 and 43 lakhs a year respectively. Udaipur is to be rich in minerals which are little worked. Its archæological remains are numerous, and stone inscriptions dating from the third century have been found.

Banswara State is the southernmost State of Rajputana within the Political Agency of the Southern Rajputana States. The area of the State is 1,946 square miles and the population 2,19,824 souls. It is thus in regard to size eleventh among the States of Rajputana. Banswara with Dungarpur originally formed a country known as Bagar, which was, from the beginning of the thirteenth century until about the year 1529, held by certain Rajput Rulers of the Ghelot or Shishodiya clan, who claimed descent from an elder branch of the family now ruling in Udaipur. After the death of Rawal Udai Singhji, the ruler of Bagar, about 1529, his territory was divided between his two sons, Prithwi Singhji and Jagmal Singhji, and the descendants of the two families are now respectively the Rulers of Dungarpur and Banswara. Where the town of Banswara now stands there was a large Bhil pal or colony under a powerful Bhil Chieftain, named Wasna, who was defeated and slain by Jagmal Singhji about 1530. The name of Banswara is by tradition said to be a corruption of Wasnawara or the country of Wasna. Others assert that the word means the country (wara) of bamboos (bans). Nearly three centuries after its foundation by Maharawal Jagmal Singhji, Maharawal Bijai Singhji, anxious to get rid of the supremacy of the Mahrattas, offered to become a tributary to the British Government. In 1818, a definite treaty was made with his successor, Maharawal Umed Singhji. Banswara has been described as the most beautiful portion of Rajputana; it looks at its best just after the rains. The principal rivers are the Mahi, the Anas, the Eran, the Chap and the Haran.

The present Ruler is His Highness Rayan Rai Maharawalji Sahib Shree Pirthi Singhji Bahadur, who was born on July 15, 1888, and is the 21st in descent from Maharawal Jagmal Singhji. His Highness was educated in the Mayo College, and succeeded his father in 1914. His Highness is entitled to a salute of 15 guns. The State is ruled by the Maharawal with the assistance of the Diwan and the Judicial and the Legislative Councils, of which the Diwan is the President. The revenue of the State is about 9 lakhs and the expenditure is about the same.

Diwan:—Kothari Zalim Singhji, B.A.

Dungarpur State, with Banswara, formerly comprised the country called the Bagar. It was invaded by the Mahrattas in 1818. As in other States inhabited by hill tribes, it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the *Gadi* of the eldest branch of the Sisodias and dates its separate existence from about the close of the 12th Century. Samant Singh, King of Chitor, when driven away by Kirtipal of Jalor, fled to Bagad and killed Chowrasimal, Chief of Baroda, and founded the State of Dungarpur. The present Chief is His Highness Rai Rayan Maharawal Shri Lakshman Singhji born on 7th March 1908, succeeded on 15th November 1918 and assumed charge of the administration on the 16th February 1928. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant. Revenue about 6½ lakhs.

Partabgarh State, also called the Kanthal, was founded in the sixteenth century by a descendant of Rana Mokal of Mewar. The town of Partabgarh was founded in 1698 by Partab Singh. In the time of Jaswant Singh (1775-1844), the country was overrun by the Marathas, and the Maharawat only saved his State by agreeing to pay Holkar a tribute of *Salim Shahi* Rs. 72,700 (which then being coined in the State Mint was legal tender throughout the surrounding Native States), in lieu of Rs. 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804; but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty by which the State was taken under protection was made in 1818. The tribute to Holkar is paid through the British Government, and in 1904 was converted to Rs. 36,350 British currency. The present ruler is His Highness Maharawat Sir Raghunath Singh Bahadur, K.C.I.E., who was born in 1859 and succeeded in 1890. The State is governed by the Maharawat with the help of the Dewan, and, in judicial matters, of a Committee of eleven members styled the Raj Sabha or State Council. Revenue about 6 lakhs; expenditure nearly 5 lakhs. The financial administration is under the direct supervision of the State.

Jodhpur State, the largest in Rajputana also called Marwar, consists largely of sandy country. The Maharaja of Jodhpur is the head of the Rathor Clan of Rajputs and claims descent from Rama, the deified king of Ayodhya. The earliest known king of the clan lived in the sixth century from which time onwards their history is fairly clear. After the breaking up of their Kingdom at Kanauj they founded this State about 1212 and the foundations of Jodhpur City were laid in 1459 by Rao Jodha. The State entered into a treaty of alliance with the British Government in 1818. Jaswant Singh succeeded in 1873 and reformed the State. His son Sardar Singh was invested with powers in 1898, the minority rule having been carried on by his uncle Maharaja Sir Pratab Singh. He died in 1911 and was succeeded by his eldest son Maharaja Sumer Singh Bahadur, who was then 14 years of age. The administration of the State was carried on by a Council of Regency, presided over by General Maharaja Sir Pratab Singh. On the outbreak of the European War both the Maharaja and the Regent offered their services and were allowed to proceed to the Front. The young Maharaja was, for his services at the Front, honoured with an Honorary Majority in the British Army and K.B.E. and was invested with full ruling powers in 1916 and died on 3rd October 1918. He was succeeded by his younger brother Major Maharaja Sir Umed Singhji Saheb Bahadur, K.C.S.I., K.C.V.O., who, on attaining majority, has taken over charge of the administration from the 27th January 1923. Revenue Rs. 1,20,00,000; expenditure Rs. 100 lakhs.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and are the direct descendants of Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844 after the British conquest of Sind the forts of Shahgarh, Garsia and Ghotaru which had formerly belonged to Jaisalmer were restored to the State. The present Ruling Prince is His Highness Maharajadhiraja Maharawal Shri Sir Jawahar Singhji Bahadur, K.C.S.I. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu, 5,650 feet. The Chiefs of Sirohi are Deora Rajputs, a branch of the famous Chauhan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajadhiraj Maharao Shri Sir Sarup Ram Singh Bahadur, K.C.S.I. The State is ruled by the Maharao with the assistance of Ministers and other officials. Revenue about 10½ lakhs; expenditure 10 lakhs.

Jaipur is the fourth largest State in Rajputana. It consists for the most part of level and open country. It was known to the ancients as Matsya Desh, and was the kingdom of the King Virata mentioned in the Mahabharata, in whose court, the five Pandava brothers during their last period of exile resided. Bhairat in the Jaipur State has been identified.

The Maharaja of Jaipur is the head of the Kuchawa clan of Rajputs, which claims descent from Kush, son of Rama, King of Ayodhya, the famous hero of the famous epic poem, the Ramayana. This dynasty in Eastern Rajputana dates as far back as ninth century A. D. Dulha Rai, one of its most early rulers, made Amber the capital of the State in 1037 A. D. About the end of 12th century one of the rulers Pajun at the head of the army of Prithvi Raj, Emperor of Delhi, defeated Shahabuddin Ghori in the Khyber Pass and pursued him as far as Ghazni. Prithvi Raj had given his sister in marriage to him. History of India records several distinguished rulers of Jaipur from

amongst whom the following require particular mention. Man Singh, 1590-1615. He was a victorious general, intrepid commander and tactful administrator, whose fame had spread throughout the country. During most troublous times, he maintained Imperial authority in Kabul and was the brilliant character of Akber'stime. Maharaja Sawai Jai Singh II (1700—44) was the first town planned in India. He removed the capital of the State to Jaipur, so named after him. During his time, the State acquired great power and fame. He was a great mathematician and scientist of his age, and is famous for his astronomical observatories which he built at several important centres in India. His court was visited by foreign astronomers. Maharaja Sawai Ram Singh, 1835-1880. He was one of the most enlightened princes in India at that time. He encouraged art and learning. He embellished the city in various ways and improved the administration and material condition of the people. Maharaja Sawai Madho Singh II, 1880-1922. He was a very wise and intelligent ruler who followed in the foot-steps of his father. He maintained and steadily improved all the useful measures initiated by the late Maharaja. His administration is characterized by great liberality, catholicity and a broad outlook on affairs. His deep religious devotion and piety and unrivalled generosity and genuine and active sympathy are well known. His staunch loyalty and maintenance of the traditions of his house raised him in the estimation of the paramount power. He passed away after a long reign of 41 years. His late Highness' donations and subscriptions to works of charity are enormous and too numerous to detail. His Highness the present Maharaja Sawai Man Singh II Bahadur was born on 21st August 1911. He was adopted by His late Highness on 24th March 1921. He is a scion of the Rajawat House of Isarda, and ascended the gadi on the 7th September 1922, and was married to the sister of the present Maharajah of Jodhpur on the 30th January 1924. He is studying at the Mayo College and promises to be an ideal ruler having given abundant evidence already of the keen and sympathetic interest he takes in all that concerns the welfare of his people and mankind in general.

During the minority of the present Ruling Prince, the administration is carried on by a Council of State. A Chief Court of Judicature was established in 1924. The army consists of Cavalry, Infantry, Transport and Artillery. The normal revenue is about one crore and twenty five lakhs and expenditure about one crore and twenty lakhs. According to the Census of 1921, the population of the State is 23,38,802. In area, it is 15,579 Sq. miles.

Khetri stretches from 75-12″ to 76′-20″ East longitude and from 27′-35″ to 28′-28″ North Latitude. The area is about 800 square miles excluding that of Panchpana villages in which Khetri has shares varying from 2 annas 6 pies to 13 annas 4 pies. The State has a population of 1,28,377 and an income of 10 lakhs.

Raja Sardar Singh Bahadur of Khetri is a Sheikhawat and a descendant of Sardul Singhji who was descended from Bhoj Raj, son of Raja Rai Sal of Khandela. Sardul Singhji conquered the northern part of the territory known as Sheikhawati from the various Nawabs and a portion of this territory is now held by Khetri under the sovereignty of the Jaipur Darbar. In addition a portion of territory known as Babai is held in istimrar jagir granted by the Jipur Darbar. The Pargana of Kotpuli was granted in istimrar jagir subject to the annual payment of Rs. 20,000 by the East India Company to Raja Abhay Singhji in 1803 in recognition of military assistance given by Khetri to the Company. This jagir was in 1806 converted into a perpetual grant in recognition of the gallant services of the Khetri contingent in the disastrous retreat of Col. Monson when they were cut down to a man in an attempt to save the life of Lieut. Lucan.

The present Raja who is a minor aged nine years succeeded his father Raja Amar Singh Bahadur on 6th May 1927. The administration of the State is carried on by G. A. Carroll, the State being under the management of the Jaipur Durbar. He is designated Superintendent of Khetri Thikana (Thikana is a word locally used for estate.)

Kishangarh State is in the centre of Rajputana and consists practically of two narrow strips of land separated from each other with an area of 858 square miles (population 77,734), the northern mostly sandy, the southern generally flat and fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputs and are descended from Maharaja Kishan Singh (second son of Maharaja Udai Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is His Highness Umdae Rajhai Buland Makan Maharajah Dhiraj Dikshit Yagnarain Singh Bahadur. He was born on the 26th January, 1896, and was educated at the Mayo College, Ajmer, where he passed the Diploma Examination. He was married to the sister of Raja Bahadur Maksudangarh in May, 1915, and a son Maharajkumar Yatendra Singhji was born of this marriage on the 5th May, 1916. He went to England and travelled on the Continent with His Late Highness in 1921. On the demise of His Late Highness on 25th September 1926, he succeeded to the Gaddi on the 24th November, 1926. He administers the State with the help of a Council. Revenue about 9 lakhs and expenditure 8 lakhs.

Lawa State, or Chief of Rajputana is a separate chiefship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers, and Lawa was then raised to its present State. The Thakurs of Lawa belonged to the Naruka sect of the Kachwaha Rajputs. The present Thakur, Raghubir Singh, was born in 1899, and succeeded to the estate in January 1923. Revenue about Rs. 20,000.

Bundi State is a mountainous territory in the south-east of Rajputana. The Ruler of Bundi is the head of the Hara sect of the great clan of Chauhan Rajputs and the country occupied by this sect has for the last five or six centuries been known as Haraoti. The State was founded in the early part of the thirteenth cen-

tury and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindaries and came under British protection in 1818 at which time it was paying tribute to Holkar. The present ruler of the State is His Highness Maharao Raja Shri Ishwari Singhji Saheb Bahadur. He was born on 8th March 1893 and succeeded to the Gadi on 8th August 1927. His Highness is entitled to a Salute of 17 guns. Revenue about 12 lakhs: Expenditure nearly the same.

Tonk State.—Partly in Rajputana and partly in Central India, consists of six Parganas separated from one another. The ruling family belongs to the Salarzai Clan of the Bunerwal Afghan tribe. The founder of the State was Nawab Mahomed Amir Khan Bahadur, General of Holkar's Army from 1798-1806. Holkar bestowed grants of land on him in Rajputana and Central India and the land so granted him was ratified by the peace made between the British and the Chiefs of Rajputana in 1817 and was consolidated into the present State. His grandson was deposed. The present ruler of the State is His Highness Amirud-Doula Wazirul-Mulk Nawab Sir Hafiz Muhammad Ibrahim Ali Khan Bahadur, G.C.S.I., G.C.I.E., ascended the masnad in 1866. The administration is conducted by the Nawab assisted by a Council of four members. *viz*:—(1) Captain W. F. Webb, I. A., Revenue Member and Vice-President; (2) Captain N. D. O. Toole, Judicial Member: (3) Khan Bahadur Sahibzada Muhammad Ishaque Khan, Home Member; and (4) Sahibzada Abdul Wahab Khan, Financial Member. Revenue Rs. 23,65,786. Expenditure Rs. 23,81,180.

Shahpura State.—The ruling family belongs to the Seesodia Clan of Rajputs. The State came into existence about 1629 when the Parganah of Phulia was granted by the Mughal Emperor Shah-i-Jehan to Maharaj Sujan Singh, son of Maharaj Surajmal, the second son of Maharana Amar Singh of Udaipur. Later on Raja Ran Singhji received the paraganah of Kachhola from the Maharana of Udaipur and was recognised as a great noble of the Mewar State.

The present Ruler is Raja Dhiraja Sir Nahar Singhji, K.C.I.E. The State enjoys permanent honour of 9 guns salute.

Bharatpur State.—Consists largely of an immense alluvial plain, watered by the Banganga and other rivers.

The present ruling family of Bharatpur are Jats, of the Sinsinwar clan who trace their pedigree to the eleventh century. The family derives its name from its old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803. It helped Lord Lake with 5,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received 5 districts as reward for the service. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a war. Peace was re-established in 1805 under a treaty of alliance and it continues in force. The Gadi being usurped by Darjan Sal in 1825, the British Government took up the cause of the rightful heir Maharaja Balwant Singh Shaib. Bharatpur was besieged by Lord Combermere, and as the faithful subjects of the State also made common cause with the British Army the usurper was quickly disposed of, and Maharaja Balwant Singh, the rightful heir to the Throne, came into his own. Bharatpur also rendered valuable service to the British Government during the Mutiny. During the great War the Bharatpur Durbar gave valuable help to the Imperial Government. The Bharatpur Imperial Service Infantry served in East Africa and the Mule Transport Corps served in all theatres of war except Africa. The following are among the most important contributions made by the State during the great war: (1) reinforcement sent to E. Africa for the Imperial Service Infantry, 714 rank and file, and 64 followers; (2) reinforcements for the Imperial Service Transport Corps, 430 rank and file and 64 followers; (3) State subscriptions to war loans 20 lakhs; (4) State subscriptions to Imperial Indian Relief Funds, Soldiers' Comfort Fund, Aeroplane Fleet Fund, Lord Kitchener's Memorial Fund, St. John's Ambulance, Serbian Relief Fund, and Red Cross, 2 lakhs; (5) public subscriptions to various war funds Rs. 26,000 and (6) public subscriptions to war bonds Rs. 69,000. Immediately upon their return from Europe the Bharatpur Transport Corps went to the North-West Frontier, and remained on active service there during the Afghan War. The Corps returned to Bharatpur at the conclusion of peace in February 1920. The present Chief is Colonel His Highness Shri Maharaja Brijendra Sawai Sir Kishen Singh Bahadur. Bahadur Jung, K.C.S.I. who was born in 1899 and succeeded in the following year his father Maharaja Ram Singh, who was deposed. Revedue 35 lakhs.

Dholpur State.—The family of the ruling Chiefs of Dholpur belongs to the Bamrolian Jats, the adopted home of one of their ancestors. The family takes the name of Bamrolia about the year 1367. They next migrated to Gwalior, where they took the part of the Rajputs in their struggles against the Emperor's Officers. Eventually the Bamrolia Jats settled near Gohad and in 1505 Surjan Deo assumed the title of Rana of Gohad. After the overthrow of the Mahrattas at Panipat, Rana Bhim Singh in 1761 possessed himself of the fortress of Gwalior but lost it six years later. In order to bar the encroachments of the Mahrattas, a treaty was made with the Rana in 1779 by the British Government under Warren Hastings, and the joint forces of the contracting parties re-took Gwalior. In the treaty of the 13th October 1781 between the British Government and Scindia, it was stipulated that so long as the Maharaj Rana observes his treaty with the English, Scindia should not interfere with his territories. The possession of Gohad however led to disputes between the British and Scindia, and in 1805 the Governor-General transferred Gwalior and Gohad to Scindia, and that of Dholpur, Bari, Baseri, Sepau and Rajakhera to Maharaj Rana Kirat Singh. Maharaj Rana Kirat Singh died in 1836 and was succeeded by his son Maharaj Rana Bhagwant Singh on whose death in 1870 his grandson, the late Chief Maharaj Rana Nehal Singh, succeeded to the Gadi. Major His

Highness Rais-ud-Daula Sipahdar-ul-Mulk Saramad Rajhai Hind Maharajadhiraj Sri Sawai Maharaj Rana Sir Udai Bhan Singh Lokindra Bahadur Diler Jang Jai Deo, K.C.S.I., K.C.V.O., the present ruler, is the second son of Maharaj Rana Nehal Singh and was born on the 12th February 1893. On the death of his brother Maharaj Rana Ram Singh His Highness succeeded to the gadi on March 1911. He was educated at the Mayo College, Ajmer, where he passed the Diploma Examination and won several prizes. After a short course of training in the Imperial Cadet Corps at Dehra Dun, His Highness went on a tour to Europe in 1912 and was invested with full ruling powers on the 9th October 1913.

By clan and family the Maharaj Rana is connected with the Jat Chiefs of Patiala, Jhind, Nabha and Bharatpur. His mother was the second sister of late Shahzada Basdeo Singh Sahib Bahadur of the family of Maharaj Ranjit Singh of Lahore. His Highness is married to the daughter of the Sardar of Badrukha in the Jhind State.

Karauli State.—A State in Rajputana under the Political control of the Political Agent, Eastern Rajputana States Agency, lying between 26° and 27° north latitude and 76° 30′ and 77° 30′ east longitude. Area, 1,242 square miles. The river Chambal forms the south-eastern boundary of the State, dividing it from Gwalior (Scindhia's Territory), on the south-west it is bounded by Jaipur; and on the north-east by the States of Bharatpur, Jaipur and Dholpur. The State pays no tribute to Government. Languages spoken Hindi and Urdu.

Ruler—His Highness Maharajadhiraj Maharaja Sir Bhom Pal, Deo Bahadur, Yadukul Chandra Bhal, Chief Member, State Council, Rao Saheb Pandit Shanker Nath Sharma.

Kotah State belongs to the Hara section, the clan of Chauhan Rajputs, and the early history of their house is, up to the 17th century, identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is H. H. Lieut.-Colonel Maharao Sir Umed Singh Bahadur, G.C.S.I., G.C.I.E., G.B.E., who was born in 1873 and invested with full powers in 1896. In administration he is assisted by two members, Rai Bahadur Pandit Bishwambhar Nath, M.A., and Major-General Onkarsingh, C.I.E. The most important event of his rule has been the restoration, on the deposition of the late Chief of the Jhalawar State, of 15 out of the 17 districts which had been ceded in 1838 to form that principality. Revenue 53 lakhs: Expenditure 48 lakhs.

Jhalawar State consists of two separate tracts in the south-east of Rajputana. The ruling family belongs to the Jhala clan of Rajputs. The last ruler was deposed for misgovernment in 1896, part of the State was reassigned to Kotah, and Kunwar Bhawani Singh, son of Thakur Chhatra, salji of Fatehpur, was selected by Government to be the Ruler of the new State. He was born in 1874 and was created a K.C.S.I. in 1908. He is assisted in administration by a Cabinet, has established many useful institutions, and has done much to extend education in the State. Revenue 8 lakhs.

The Bikaner State in point of area is the 7th largest of all the Indian States and the second largest in Rajputana. The population of the State is 659,685 of whom 84 per cent. are Hindus, 11 per cent. Mohommadans and 1·5 per cent. Jains. The Capital City of Bikaner, with its population including the suburbs of 69,410, is the 3rd City in Rajputana.

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating. The average rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The Reigning Family of Bikaner is of the Rathore clan of Rajputs, and the State was founded in 1465 A.D. by Rao Bikaji, son of Rao Jodhaji, Ruler of Marwar (Jodhpur), and after him both the Capital and the State are named. Rai Singhji, the first to receive the title of Rajah, was "one of Akbar's most distinguished Generals" and it was during his reign that the present Fort of Bikaner was built in 1593. The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor in 1687 in recognition of his distinguished services in the capture of Golconda. The conspicuous services of Maharajah Sardar Singhji who in the Indian Mutiny of 1857 personally led his troops to co-operate with the British forces in the field on the outbreak of the Mutiny was acknowledged by the Government of India by the transfer of the Sub-Tehsil of Tibi, consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State.

The present Ruler, Major-General His Highness Maharajadhiraj Raj Rajeshwar Narendra Shiromani Maharaja Sri Sir Ganga Singhji Bahadur, G.G.S.I., G.C.I.E., G.C.V.O., G.B.E., K.C.B., A.D.C., LL.D., is the 21st of a long line of distinguished rulers renowned for their bravery and statesmanship. He was born on the 3rd October 1880, and assumed full ruling powers in December, 1898. He was awarded the first class Kaisar-i-Hind Medal for the active part he took in relieving the famine of 1899-1900, and soon after he went on active service to China in connection with the China War of 1900-1901 in command of his famous Ganga Risala and was mentioned in despatches and received the China Medal and K.C.I.E. The State Forces consist of the Camel Corps, known as 'Ganga Risala,' whose sanctioned strength is 465 strong, an Infantry Regiment 443 strong, a Regiment of Cavalry 342 strong, including Body Guard, a Battery of Artillery (6 guns), and Camel Battery 60. At the outbreak of the Great War in 1914, His Highness immediately placed the services of himself and his State forces and all the resources of the State at the disposal of His Imperial Majesty the King-Emperor, and the Ganga Risala reinforced by the Infantry Regiment, which became incorporated in the Camel Corps in the field, rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoys the honour of having fought both in France and Egypt, and thus has the distinction of having fought for the British Crown on three Continents, *viz.*, Asia, Europe and Africa. He was mentioned in despatches both

in Egypt and France. His Highness also played a very conspicuous political part during the period of the War when he went twice to Europe as the Representative of the Princes of India, once in 1917 to attend the meetings of the Imperia War Cabinet and Conference, and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the treaty of Versailles.

His Highness enjoys a salute of 19 guns (personal) whilst the permanent local salute of the State is also 19. His Highness has also had the honour of being elected the first Chancellor of the Chamber of Princes, an office which he filled most creditably for 5 years till 1925.

His Highness is assisted in the administration of the State by the State Council consisting of 5 Ministers under a Prime Minister and Chief Councillor in the person of Sir Manubhai N. Mehta, Kt., C.S.I., M.A., LL.B., formerly the Dewan of the Baroda State. A Legislative Assembly was inaugurated in 1913, and consists of 45 Members, 18 out of whom are elected Members, and which meets twice a year.

The revenues of the State are over ninety lakhs of rupees and the State owns a large Railway system, the total mileage being 619·15. Several projects for its extension are under contemplation, including the new scheme of railway line connecting Delhi with Sindh and running through the Bikaner and Jaisalmere States. At present there is practically no irrigation in the State, the crops depending wholly on the scanty rainfall; but the Sutlej Canal Project which is now under construction will irrigate annually 620,000 acres in the north and help to protect the State against the serious famines from which it has suffered in the past. Even larger expectations are held out from the Bhakra Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated. A coal mine is worked at Palana, 14 miles south from the Capital.

Alwar State is a hilly tract of land in the East of Rajputana. Its Rulers belong to the Lalawat Naruka branch of Kshatrias, Solar Dynasty. This ruling family is descended from Raja Udai Karanji, who was the common ancestor of both Alwar and Jaipur. The State was founded by Pratab Singh, who before his death in 1791 had secured possession of large territories. His successor sent a force to cooperate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year. Disputes about successions mark the history of the State during the earlier part of the nineteenth century. The present chief, H. H. Veerendra Shiromani Dev Col. Shri Sewai Maharaja Sir Jey Singhji Bahadur, G.C.I.E., K.C.S.I., who was born in 1882, succeeded his father in 1892 and was invested with powers in 1903. He carries on the administration with the assistance of five Ministers, Members of His Highness' Council and various heads of departments. The normal revenue and expenditure are about Rs. 55lakhs a year. The State besides maintaining other forces, maintains also the Imperial Service Troops which His Highness the late Maharaja was the first prince in Rajputana to offer (in 1888) in the defence of the Empire. Alwar stood first in recruiting in Rajputana at the time of the Great War and enjoys a salute of 17 guns. The capital is Alwar on the Rajputana-Malwa Railway, 98 miles west of Delhi.

RAJPUTANA.

Agent to Governor-General—The Hon. Mr. L. W. Reynolds C.S.I., C.I.E., M.C.

UDAIPUR.

HARAOTI AND TONK.

Political Agent—Lt.-Col. R. J. Macnabb.

SOUTHERN RAJPUTANA STATES.

Political Agent—Lt. D. M. Field.

CENTRAL INDIA AGENCY.

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Agent to the Governor-General in Central India with headquarters at Indore. As constituted in 1921—that is, after the separation of the Gwalior Residency—it is an irregularly formed tract lying in two sections, the Eastern comprising Bundelkhand and Baghelkhand Agencies between 22°-38′ and 26°-19′ North and 78°-10′ and 83°-0′ East and the Western consisting of the Bhopal and Southern States and Malwa Agencies between 21°-22′ and 24°-47′ North and 74°-0′ and 78°-50′ East. The British districts of Jhansi and Saugor and the Gwalior State divide the Agency into two sections. The total area covered is 51,531·3 square miles and the population (1921) amounts to 59,97,023. The great majority of the people are Hindus. There are 28 Salute States of which the following 10 have direct treaty engagements with the British Government:—Indore, Bhopal, Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaora. All of these are Hindu except Bhopal Jaora and Baoni which are Muhammedan. Besides these there are 56 Minor States and Guaranteed Estates. Excluding the Indore State and the Hirapur and Lalgarh Estates they are divided into following groups for administrative purposes:—Bhopal Agency, 8 States and Estates (principal State Bhopal); Baghelkhand Agency, 12 States and Estates (principal State Rewa); Bundelkhand Agency, 22 States and Estates (principal State Orchha); Southern States and Malwa Agency, 41 States and Estates (principal States Dhar, Dewas Senior Branch, Dewas Junior Branch, Jaora and Ratlam). The Agency may roughly be divided into two natural divisions, "Central India West comprising the former Plateau division with such hilly land as lies on this side and Central India East comprising the former low-lying area and

the Eastern hilly tracts." The hilly tracts lie along the ranges of the Vindhyas and Satpuras. They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied.

The following is the size, population and revenue of the ten treaty States mentioned above:—

Name.	Area in square miles.	Population.	Revenue
			Lakhs Rs.
Indore	9,519	11,51,598	124
Bhopal ..	6,902	6,92,448	62
Rewa	13,000	14,01,524	60
Orchha ..	2,079	2,84,948	10
Datia	911	1,48,659	19
Dhar	1,777	2,30,333	16
Dewas, Senior Branch ..	449	77,005	9
Dewas, Junior Branch ..	419	66,998	6
Samthar ..	180	33,216	3
Jaora	601	85,778	12

Gwalior.—The house of Scindia traces its descent to a family of which one branch held the hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzebe. The founder of the Gwalior House was Ranoji Scindia who held a military rank under the Peshwa Baji Rao. In 1726 the Peshwa granted deeds to Puar, Holker and Scindia, empowering them to levy "Chauth" and "Sardesmukhi" and retain half the amount for payment to their troops. In 1736 Ranoji Scindia accompanied Baji Rao to Delhi where he and Mulhar Rao Holker distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain, which for the time became the Capital of the Scindia dominions. During the time of Mahadji Scindia and Dowlat Rao Scindia Gwalior played an important part in shaping the history of India. Despite the partial reverse which Mahadji Scindia's troops suffered at the hands of the British in 1780, reverses which led to the treaty of Salbai (1782), Scindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa

In 1790 his power was firmly established in Delhi. While he was indulging ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February, 1794. Himself a military genius, Mahadji Scindia's armies reached the zenith of their glory under the disciplined training of the celebrated French adventurer—De Boigne. Mahadji was succeeded by his grandnephew Daulat Rao in whose service Perron, a Military Commander of great renown played a leading part. The strength of Scindia's Army was, however, considerably weakened by the reverses, sustained at Ahmednagar, Assaye, Asirgarh and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigue and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Maharajpore and Pannihar.

Jankoji Rao was succeeded by Jiaji Rao, whose adherence to the British cause during the dark days of Mutiny, when his own troops deserted him, was unshakable. In 1861 he was created a Knight Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empress. Subsequently he received other titles and entered into treaties of mutual exchange of territories with the British Government. He died on the 20th June 1886 and was succeeded by his son Lieutenant-General H. H. Maharaja Sir Madho Rao Scindia, Alijah Bahadur, G.C.V.O., G.C.S.I., G.B.E., A.D.C. to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war; he held the rank of honorary Lieutenant General of the British Army and the honorary degrees of LL.D., Cambridge, and D.C.L., Oxon. He was also a Donat of the Order of St. John of Jerusalem in England. He died in June 1925 and was succeeded by his son H. H. Jeewajirao Scindia in September 1925 during whose minority the administration of the State will be carried on by a Council of Regency.

The ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India.

The northern part of the State is traversed by the G.I.P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Bhind, from Gwalior to Sheopur and from Gwalior to Shivpuri. The main industries are cotton ginning, which is done all over the State; fine muslins made at Chanderi, leather work, etc. The State maintains three regiments of Imperial Service Cavalry, two battalions of Imperial Service Infantry and a transport corps. Lashkar, the capital city, is two miles to the south of the ancient city and the fort of Gwalior. Annual income about 2 crores and expenditure about 175 lakhs.

Indore.—The founder of the House of the Holkar of Indore was Malhar Rao Holkar, born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761, Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Ahilya Bai became the Ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Tukoji Holkar who indeed had been associated with her to carry the Military administration and had in the course of it, distinguished himself in various battles. Tukoji was succeeded by Kashirao, who was supplanted by Jeswant Rao, his step brother, a person of remarkable daring and strategy as exhibited in a number of engagements in which he had taken part. The brilliant success he obtained at the battle of Poona

against the combined armies of Peshwa and Scindia made him a dictator of Poona for some time and he declared in consequence the independence of Holkar State. During 1804-5 he had a protracted war with the British, closed by a Treaty which recognised the independence of Holkar State with practically no diminution of its territories and rights. Jaswant Rao showed signs of insanity from 1808 onwards and succumbed to that malady in 1811, when he was succeeded by his minor son Malhar Rao II. During the Regency which followed, the power of the State was weakened by various causes, the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwa in 1817, some of these commanders, with a part of the army, rebelled against the authority of the State and were disposed to befriend the Peshwa, while the Regent, mother and her Ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar Army which culminated in the latter's defeat. Holkar had to come to terms and to cede extensive territories and rights over the Rajput Princes to the British, but the internal sovereignty remained unaffected. The Treaty of 1818 which embodied these provisions still regulates the relations between the British Government and the State.

Malhar Rao was well served by his able Minister Tatya Jog. He died a premature death in 1833. Then followed the weak administration of Hari Rao and his son. In 1844 Tukoji Rao II ascended the throne; but as he was a minor, the administration was carried on by a Regency which was fortunate in having Sir Robert Hamilton, the Resident as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the outbreak of Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched. The Maharaja with his adherents and the remaining troops remained however staunch to the British and gave every possible assistance to the British authorities at Indore, Mhow and other places, which was recognised by the British Government. The Maharaja died in 1886 after having effected various reforms in the administration and raised the position of the State to a high degree of prosperity and honour. He was succeeded by Shivaji Rao who reigned for 16 years and will be specially remembered for his beneficient measures in matters of education, sanitation, medical relief and abolition of transit duties. Tukoji Rao III, Ex-Maharaja, succeeded in 1903 while yet a minor. The Regency Adminstration continued till 1911 and it deserves credit for a number of reforms effected in all the branches of administration. The policy of the Regency was maintained by the Maharaja, and since his assumption of powers the State has advanced in education in general including female education, commerce and industrial developments, municipal franchise and other representative institutions. This prosperity is specially reflected in the Indore city, the population of which has risen by forty per cent. The city has a first grade college, 3 High Schools and 1 Sanskrit College, with a number of other Medical and educational institutions An Institute of Plant Industry for the improvement of cotton is located at Indore. It has also 9 Spinning and Weaving Mills.

During the War of 1914 the State placed all its resources at the disposal of the British Government. Its troops took part in the various theatres of war and the contribution of the State towards the War and Charitable Funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs. 82 lakhs, while the contributions from the Indore people amounted to over one crore. This assistance received the recognition of the British Government. In the administration His Highness is assisted by his Prime Minister and a Council. The State Army consists of about over 3,200 officers and men. The State is traversed by the Holkar State Railway, the principal Station of which is Indore, R. M. Railway and B. B. & C. I. Railway and the U. B. Section of the G. I. P. Railway. Besides the trunk roads, there are 600 miles of roads constructed and maintained by the State. The reforms introduced were the establishment of State Savings Banks, Scheme of Life Insurance for State Officials, establishment of a Legislative Committee consisting of seven elected Members out of a total of nine Members, introduction of the Scheme of Compulsory Primary Education in the City of Indore, and measures for expansion of education in the mofussil.

His Highness Maharaja Tukoji Rao III abdicated in favour of his son. The present Maharaja Yeshwant Rao Holkar (a minor) was born on 6th September 1908. He received his education in England from 1920-23 and has again proceeded to Oxford for higher education. He married a daughter of the Junior Chief of Kagal (Kolhapur) in February 1924. The Maharaja being minor, the administration is conducted by the Cabinet and the Prime Minister in accordance with the existing rules and practice under the supervision of and with the advice of the Hon'ble the Agent to the Governor-General in Central India.

The chief imports are cloth, machinery, sugar, salt and kerosine oil. The total imports in 1927, amounted to Rs. 2,04,24,081.

The chief exports are cotton,cloth,tobacco and cereals. The total exports in 1927 amounted to Rs. 90,91,301; while the total production from Ginning Factories was valued at Rs. 2,45,37,949.

Cloth manufactured at the local mills is valued at nearly two crores and the local trade in wheat is estimated at one crore.

Cotton excise duty at 3½ per cent. *ad valorem* has been abolished from 1st May 1926 and an industrial tax is levied on the cotton mills from the same date at the rate of 1½ anna per rupee on all incomes upto Rs. 50,000, and 2½ annas per rupee on all incomes above Rs. 50,000.

The area of the State is 9,520 square miles with a revenue of about one crore and thirty eight lakhs.

Bhopal.—The principal Mussalman State in Central India ranks next in importance to Hyderabad among the Muhammadan States of India. The ruling family was founded by Dost Mohammed Khan, a Tirah Afghan. He was granted a *Sanad* of Bairasia and Nazirabad *Purganas* in recognition of his meritorious services to the Emperor of Delhi. With the

disintegration of the Mogul Empire Bhopal State developed into an independent State. In the early part of the 19th century, the Nawab successfully withstood the inroads of Scindia and Bhonsla and by the agreement of 1817 Bhopal undertook to assist the British with a contingent force and to co-operate against the Pindari bands.

The present ruler of the State, His Highness Sikander Saulat Nawab Iftikharul-Mulk, Mohammed Hamidullah Khan Bahadur, B.A., C.S.I., C.V.O., succeeded his mother, Her Highness Nawab Sultan Jahan Begum, on her abdication in May 1926. Having ably conducted the administration of the State for nearly ten years as Chief Secretary and afterwards as Member for Finance and Law and Justice Departments, His Highness is personally conversant with each and every detail of the administration.

The names of Members of His Highness' State Council are given below in order of precedence.

Ali Martabat, Sir Oswald Vivian Bosanquet, K.C.S.I., C.I.E., I.C.S., President of the State Council, and Member, Revenue Department.

Ali Martabat, Rai Bahadur Raja Oudh Narain Bisarya, B.A., Member for Finance. Law and Justice and Public Works Departments.

Ali Martabat Nasirul Mulk Moulvi Syed Leakat Ali, M.A., LL.B., Member, Robkari Khas.

Ali Martabat Dr. Sahebzada Saeeduzzafar Khan, M.B., Ch. B. (Edin.) D.T.M. (Liverpool), Member for Public Health and Education Department.

Ali Martabat Colone H. C. S. Ward, C.I.E., O.B.E., Member in charge of the Army Department.

Member, Political Department—Vacant.

For the present the Political Department is under His Highness' direct control.

The Secretary-in-charge of the Department is Ali-Qadar, Kazi Ali Haidar Abbasi.

Along with other troops, the State maintains one full strength Pioneer Battalion. The Capital, Bhopal City, situated on the Northern bank of an extensive lake, is the junction for the Bhopal-Ujjain Section of the Great Indian Peninsula Railway.

Rewa.—This state lies in the Baghelkhand Agency, and falls into two natural divisions separated by the scarp of the Kaimur range. The area is 13,000 sq. miles with a population of 14 lakhs. Its Chiefs are Baghel Rajputs descended from the Solanki clan which ruled over Gujarat from the tenth to the thirteenth century. In 1812, a body of Pindaries raided Mirzapur from Rewa territory and the Prince, who had previously rejected overtures for an alliance, was called upon to accede to a treaty acknowledging the protection of the British Government. During the Mutiny, Rewa offered troops to the British, and for his services then, various parganas, which had been seized by the Marathas, were restored to the Rewa Chief. The present chief is H. H. Bandhawesh Maharaja Sir Gulab Singhji Bahadur, K.C.S.I., who was born in 1903. He was married in 1919 to the sister of His Highness the Maharaja of Jodhpur. Upon the death of his father Col. H. H. Maharaja Sir Venkat Raman Singh Bahadur, on 30th October, 1918, H. H. Bandhawesh Maharaja Gulab Singh Bahadur succeeded to the gaddi on 31st October, as a minor. During the period of minority the State was administered by a Council of Regency with H. H. Maharaja Sir Sajjan Singh Bahadur Colonel, K.C.S.I., K.C.V.O., A.D.C., of Rutlam as Regent. H. H. Bandhawesh Maharaja Gulab Singh Bahadur attained majority in 1922 and was invested with full ruling power on 31st October 1922, by H. E. the Viceroy and the administration of the State is now carried on by him with the aid of four Commissioners. His Highness has got a son and heir named Maharaj Kumar Martand Singhji, born on 15th March 1923.

His Highness' second marriage with the daughter of H. H. Maharaja of Kishengarh was performed on the 18th February 1925.

Dhar.—This State, under the Agency for Southern States in Central India, takes its name from the old city of Dhar, long famous as the capital of the Paramara Rajputs, who ruled over Malwa from ninth to the thirteenth century and from whom the present chiefs of Dhar—Powar Marathas—claim descent. In the middle of the 18th century the Chief of Dhar, Anand Rao, was one of the leading chiefs of Central India, sharing with Holkar and Scindia the rule of Malwa. The State came into treaty relations with the British Government in virtue of the treaty of 1819. Lt.-Colonel H. H. the Maharaja Sir Udaji Rao Powar, Sahib Bahadur, K.C.S.I., K.C.V.O., K.B.E., died on 30th July 1926 and the government of the State is carried on by a Council with H. H. the Maharani Sahiba as President. There are 11 Feudatories and 9 Bhumias of whom 13 hold a guarantee from the British Government. The average expenditure is about 18 lakhs. Rao Bahadur K. Nadkar is Dewan of the State and Vice-President of the Council. The present Ruler His Highness Maharaja Anand Rao Puar Sahib Bahadur is a minor

Jaora State.—This State is in the Malwa Political Agency covering an area of about 601 square miles with a total population of 85,817, and has its headquarters at Jaora town. The Chiefs of Jaora claim descent from Abdul Majid Khan, an Afghan of the Tajik Khel, from Swat, who came to India to acquire wealth. The first Nawab was Ghafur Khan who obtained the State about the year 1808. The present chief is Lt.-Colonel H. H. Fakhrud-Daulah Nawab Sir Mohammad Iftikhar Ali Khan Saheb Bahadur Saulat-e-Jang, K.C.I.E., who was born in 1883 and is an Honorary Lt.-Colonel in the Indian Army.

In the administration of the State His Highness is assisted by a Council constituted as under :—*President* :—His Highness the Nawab Sahib, *Vice-President*:—Khan Bahadur Sahibzada Mohd. Serfraz Ali Khan, Chief Secretary; *Members*:—(1) Khan Bahadur Sahibzada Mohd. Sher Ali Khan, Military Secretary, (2) Sahibzada Mohd. Safdar Ali Khan, Private Secretary, (3) Munshi Ram Dayal, Financial Secretary, (4) Munshi Mohd. Mian Jan Khan, Senior Member, Revenue Board.

A Chief Court with a Chief Justice and two Puisne Judges and a Revenue Board with two members have also been established.

The soil of the State is among the richest in Malwa, being mainly of the best black variety bearing excellent crops of wheat, cotton and poppy. The average annual revenue is Rs. 11,67,000.

Rutlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including that of the Jagir of Khera in the Kushalgarh Chiefship, which pays an annual tribute to the Rutlam Darbar. The State was founded by Raja Ratansinghji, a great grandson of Raja Udai Singh of Jodhpur, in 1652. The Ruler of Rutlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal powers. The present Ruler of Rutlam is Colonel His Highness Maharaja Sir Sajjan Singh, K.C.S.I., K.C.V.O. A.D.C., to H. R. H. the Prince of Wales, who was born in 1880, educated at Daly College, Indore, received military training in Imperial Cadet Corps and invested with full powers in 1898. His Highness served in the war in France and Egypt from 1915 to 1918, was mentioned in despatches and received the Criox d'Officiers de legion d'Honneur. Salute: 13 guns, local 15 guns.

Dewan—Rai Bahadur B. N. Zutshi, B.A., LL.B.

Datia State.—The rulers of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha house. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1626, this was extended by conquest and by grants from the Delhi emperors. The present Ruler Major His Highness Maharaja Lokendra Sir Govind Sinh Ju Deo Bahadur, K.C.S.I., 1918, who was born in 1886 and succeeded in 1907, married 1902, enjoys a salute of 15 guns. He placed all his resources and his personal services at the disposal of the Imperial Government during the Great War and established a War Hospital at Datia. He is a progressive Ruler and has created a Legislative Council and introduced many useful and important reforms in his State. He is a Vice-President of St. John Ambulance Association, a patron of Red Cross Society and has recently offered to the Imperial City of Delhi the life size marble statue of Lord Reading, the late Viceroy. His Highness is a famous big game shot and has shot more than 108 tigers. The Heir Apparent Raja Bahadur Balbhadra Singh, born 1907, has married a daughter of the Maharaja Bahadur of Balrampur and is a very promising prince.

Orchha State.—The rulers of this State are Bundela Rajputs claiming to be descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A.D. It entered into relations with the British by the treaty made in 1812. The present ruler is His Highness Sir Pratap Singh, G.C.S.I., G.C.I.E., who was born in 1854. He has the hereditary titles of His Highness Saramad-i-rajhai-Bundelkhand Maharaja Mahendra Sawai Bahadur. The present chief enjoys a salute of 17 guns. The State has a population of about 330,032 and an area of 2,080 square miles. The capital is Tikamgarh, 36 miles from Lalitpur Station, on the G.I.P. Railway. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Maharaj Bir Singh Deo, the most famous ruler of the State (1605-1627).

GWALIOR.

BAGHELKHAND.

Political Agent—K. S. Fitze.

Sikkim.

Sikkim is bounded on the north and north-east by Tibet, on the south-east by Bhutan, on the south by the British district of Darjeeling, and on the west by Nepal. The population consists of Bhutias, Lepchas, and Nepalese. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west, forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges, which run southwards from the main chain, separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kinchinjunga (28,146 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Dongkya La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906. The State is thinly populated, the area being 2,818 square miles, and the population 81,721, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Sir Tashi Namgyal, K.C.I.E., was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.E. was conferred upon the Maharaja on the 1st January 1918 and K.C.I.E. on 1st January 1923. The average revenue is Rs. 6,73,976

Political Officer in Sikkim:—Lt.-Col. F. M. Bailey, C.I.E.

Bhutan.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas, adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanese into Assam, an envoy (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by the advice of the British Government in regard to its external relations, while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Chumbi, but their ruler, the Tongsa Penlop, accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E., and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H.H. the Maharaja of Bhutan, Sir Uggen Wangchuk, K.C.S.I., K.C.I.E. At the head of the Bhutan Government, there are nominally two supreme authorities; the Dharma Raja, known as Shapting Renipoche, the spiritual head; and the Deb or Depa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of Bhutan.

Cultivation is backward and the chief crop is maize. The military force consists of local levies under the control of the different chiefs. They are of no military value.

Nepal.

The kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 56,000 square miles, with a population of about 5,580,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana, obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to keep a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained and during the rule of the present Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr. Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries, the present Prime Minister, Marshal and Supreme Commander-in-Chief, signed a new Treaty of friendship concluded between the Governments of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander-in-Chief, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Chandra Shum Shere Jung

Bahadur Rana, G.C.B., G.C.S.I., G.C.M.G., G.C.V.O., D.C.L., Hon. Genl., British Army; Hon. Col., Fourth Gurkhas; Thong-Lin-Pimma-Kokang-Wang-Syan; (Highest rank in the Chinese organisation); Grand Officier de la Legion d'Honneur, Prime Minister, Marshal and the Supreme Commander-in-Chief, Nepal, June 1901.

Rice, wheat and maize form the chief crops in the low lands. Mineral wealth is supposed to be great, but, like other sources of revenue, has not been developed. Communications in the State are primitive, but since 1920 the Government has already undertaken the construction of a good and permanent road for vehicular traffic from Raxaul to Bhimphedi—the base of a steep ridge in the main route to the capital of the country from British India—and also has installed a ropeway to connect this base with the capital proper covering a distance of 14 miles. A light railway from Amlekhgung covering a distance of 25 miles in the route and connecting with the B. & N. W. Ry. at Raxaul also has been constructed and opened for traffic since March 1927. It has also put up a telephone over this route connecting the capital with the frontier township of Birgunge near Raxaul. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000 the highest posts in it being filled by relations of the minister. The State is of considerable archæological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

British Envoy—W. H. J. Wilkinson, C.I.E. C.V.O.

NORTH-WEST FRONTIER STATES.

The Indian States of the North-West Frontier Provinces are Amb, Chitral, Dir and Phulera. The total area is about 7,704 square miles and the population, mainly Mahomedan, is 1,622,094. The average annual revenue of the first three is about Rs. 4,65,000, that of Phulera is unknown.

Amb.—Is only a village on the western bank of the Indus in Independent Tanawala.

Chitral.—Runs from Dir to the south of the Hindu-Kush range in the north, and has an area of about 4,500 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission, and in 1889, on the establishment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amam-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government, but he was murdered in 1895. A war was declared by Umrakhan of Jandul and Dir against the infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1895) to their relief.

The three valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by His Highness Sir Shujaul-mulk, K.C.I.E., the Mehtar of Chitral, and the foreign policy is regulated by the Political Agent at Malakand.

Dir.—The territories of this State, about 5,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur Rud. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufzai Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Bashkar.

Political Agent for Dir, Swat and Chitral C. Latimer, C.I.E., I.C.S.

STATES IN THE MADRAS PRESIDENCY.

The Madras Presidency includes 5 Indian States covering an area of 10,643 square miles. Of these, the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Tondiman. Banganapalle and Sandur two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts.

Name.	Area sq. miles.	Population.	Estimated Gross Revenue in lakhs of rupees
Travancore ..	7,625	4,006,062	238·54
Cochin ..	1,417¾	979,019	76·59
Pudukottai ..	1,179	426,813	22·61
Banganapalle .	255	36,692	3·58
Sandur ..	167	11,684	1·42

These States were brought into direct relation with the Government of India on October 1st, 1923.

Travancore.—This State, which has an area of 7,624·84 square miles and a population of 4,006,062 with a revenue of Rs. 238·54 lakhs occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional; but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, included within its present boundaries, was consolidated and brought under one rule, by the Maharaja Marthanda Varma (1729-58). The English first settled at Anjengo, a few miles to the north

of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madura and Tinnevelly, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible inroads by Tippu, an arrangement was come to in 1788 with the East India Company, and in 1795 a formal treaty was concluded, by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

H. H. the Maharaja (*b.* November 1912) ascended the masnad in September 1924. During the minority the State is ruled by Her Highness Maharani Setu Lakshmi Bai, aunt of the Maharaja, as Regent on his behalf. The work of legislation is entrusted to a Council brought into existence in 1888 and as last reconstituted in 1921, has a majority of non-official elected members. The Council is invested with the powers of voting on the budget, moving resolutions and asking questions including supplementary questions. Women are placed on a footing of complete equality with men in the matter of both franchise and membership. This is the largest measure of constitutional reform introduced in any Indian State. A representative assembly known as the Sri Mulam Popular Assembly meets once a year. Its members who are the elected representatives of the people are given an opportunity to express direct to the Dewan their wants and wishes and their views regarding the administrative measures adopted from time to time. Local Self-Government on a small scale exists in the more important towns. The State supports a military force of 1,473 men. Education has advanced considerably in recent years and the State takes a leading place in that respect. In the matter of female Education the State has a leading place among Indian States and the British Indian Provinces. The principal food-grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca-nut, jack-fruit, sugar-cane and tapioca. Rubber and tea are among other important products. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads, and with a natural system of back-waters, besides canals and rivers navigable for country crafts. One line of railway about one hundred miles in length cuts across the State from east to west and then runs along the Coast to the Capital. More railway lines are in contemplation. The capital is Trivandrum.

Agent to the Governor-General—Lt.-Col. C. G. Crosthwaite, C.B.E.

Dewan—Maurice E. Watts, B.A., Bar-at-Law.

Cochin.—This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore. Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Raja Sri Sir Rama Varmah, G.C.S.I., G.C.I.E., who was born in 1852, and who ascended the Masnad in 1895, having abdicated in December, 1914. His Highness Sri Sir Rama Varmah, G.C.I.E., who was born on 6th October, 1858, succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Maharaja whose chief Minister and Executive Officer is the Dewan, Rao Bahadur T. S. Narayana Iyer, M.A., B.L. The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts, and their products form the chief exports of the State. Communications by road and back-waters are good, and the State owns a line of railway from Shoranore to Ernakulam, the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 32 officers and 330 men.

Agent to the Governor-General—Lt.-Col. C. G. Crosthwaite, C.B.E.

Pudukkottai.—This State is bounded on the north and west by Trichinopoly, on the south by Ramnad and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf, the Company's sepoy commandant, in settling the Madura and Tinnevelly countries. Subsequently he was of much service in the wars with Haidar Ali. His services were

rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty or arrangement with the Raja. His Highness Sri Brihadamba Das Sir Marthanda Bhairava Tondiman Bahadur, G.C.I.E., the Raja, died in Paris on 28th May 1928 and the *Gadi* is vacant at present. The various departments are constituted on the British India model. The principal food crop is rice. The forests, which cover about one-seventh of the State, contain only small timber. There are no large industries. The State is well provided with roads, but Pudukkottai is the only municipal town in the State.

Agent to the Governor-General—Lt.-Col. C. G. Crosthwaite, C.B.E.

Assistant Agent to the Governor-General—Rao Sahib E. K. Govindan.

Banganapalle.—This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Fazle Ali Khan Bahadur. The chief food-grain is cholam. The Nawab pays no tribute and maintains no military force. The revenue of the State is over 3 lakhs. The Nawab enjoys a salute of 9 guns.

Agent to the Governor-General :—Lieut.-Col. C. G. Crosthwaite, C.B.E.,

Assistant Agent to the Governor-General :—Rao Sahib E. K. Govindan.

Sandur.—The State is almost surrounded by the District of Bellary, the Collector of which is the Assistant to the Governor-General's Agent. After the destruction of the Empire of Vijayanagar in 1565 the State came to be held by semi-independent chiefs under the nominal sovereignty of the Sultan of Bijapur and in 1728 one of these chiefs, a Poligar of Bedar tribe, was turned out by an ancestor of the present Raja named Siddoji Rao of the Bhosle family of the famous Maharatta Chief Sivaji; they were Senapathies of Sivaji. In Siva Rao's time the State came under the Madras Government and his heirs in perpetuity with full powers, Civil and Criminal. In 1876 the title of Raja was conferred on the Chief as a hereditary distinction. The present ruler is Raja Shrimant Yeshwant Rao Anna Saheb Ghorpade who is a minor,

Assistant Agent to the Governor-General :—Rao Sahib E. K. F Govindan.

The Raja pays no tribute and maintains no military force. The most important staple crop is cholam. Teak and sandalwood are found in small quantities in the forests.

The minerals of the State possess unusual interest. The hematites found in it are probably the richest ore in India. An outcrop near the southern boundary forms the crest of a ridge 150 feet in height, which apparently consists entirely of pure steel grey crystalline hematite (specular iron) of intense hardness. Some of the softer ores used to be smelted, but the industry has been killed by the cheaper English iron. Manganese deposits have also been found in three places, and during 1911 to 1914 over 223,000 tons of manganese ore were transported by one company.

Agent to the Governor-General :—Lieut.-Col. C. G Crosthwaite, C.B.E.

STATES OF WESTERN INDIA.

Owing to the large number of States concerned and the interlacing of their territories with neighbouring British districts, the transfer of States under the Bombay Government to direct political relations with the Government of India (which was advocated in the Montagu-Chelmsford Report on the Constitutional Reforms) had been delayed. The first stage of that process, however, was carried out in October, 1924, when a new Residency was created in direct relation with the Government of India comprising the whole of the compact area making up the Kathiawar, Cutch and Palanpur Agencies under the Government of Bombay.

Resident of the First Class and Agent to the Governor-General in the States of Western India :—The Hon'ble Lt.-Col. H. S. Strong.

Judicial Commissioner in the States of Western India :—R. S. Broomfield, I.C.S.

Kathiawar.—Kathiawar is the peninsula lying immediately to the North of Gujarat in the Bombay Presidency. Its extreme length is about 220 miles and its greatest breadth about 165 miles, the area being 23,445 square miles. There are nearly 200 separate States in Kathiawar, which for purposes of administrative convenience is sub-divided into subordinate Agencies known as the Western and Eastern Kathiawar Agencies. The Western Kathiawar Agency comprises the Halar and Sovath Prants, while the Eastern Kathiawar Agency Comprises the Prants of Jhalawad and Gohelwad but in which ever of these two Agencies States with Salutes of guns are situated, they are in direct political relations with the Hon'ble the Agent to the Governor-General. The history of the British connection with Kathiawar commences from Colonel Walker's settlement of 1807. In 1863, the States in Kathiawar were classified into 7 classes, and although classes have since been abolished, the various jurisdictions still remained graded, as fixed in 1863.

Cutch.—Before the creation in October 1924, of the Western India States Agency, the relations of the Cutch Durbar with the Bombay Government were conducted through a Political Agent in charge of the Cutch Agency, with Headquarters at Bhuj. The Cutch Agency and the appointment of the Political Agent have since been abolished and the State of Cutch is in direct relations with the Hon'ble the Agent to the Governor-General in the States of Western India.

Banas Kantha Agency.—TheBanas Kantha Agency is the name given to the area formerly known as the Palanpur Agency, in which were situated the two important States of Palanpur and Radhanpur, and a number of smaller States

and Agency Thanas. The States of Palanpur and Radhanpur are now in direct political relations with the Hon'ble the Agent to the Governor-General in the States of Western India while the Political Agent, Banas Kantha Agency, with Head-quarters at Palanpur, is responsible for the remainder of the late Palanpur Agency.

Bhavnagar.—This State lies at the head and west side of the Gulf of Cambay. The Gohel Rajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sajakji from whose three sons—Ranoji, Saranji and Shahji—are descended respectively the chiefs of Bhavnagar Lathi and Palitana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the chief of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar; but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs. 1,28,060 to the British Government, Rs. 3,581-8-0 as Peshkashi to Baroda, and Rs. 22,858 as Zortalbi to Junagadh. During the minority of His Highness the Minor Maharaja Krishna Kumarsinhji who succeeded to the *gadi* on the death of his father, Maharaja Sir Bhavsinhji, K.C.S.I., on 17th July 1919, the administration of the State has been entrusted to a Council of Administration. The Council consists of Sir Prabhashankar D. Pattani, K.C.I.E., as President, and Lieut.-Colonel A. H. E. Mosse as Vice-President. The other members of the Council are Dewan Bahadur T. K. Trivedi and Mr. S. A. Goghawala, M.A., LL.B., Bar-at-law. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others, being directly responsible to the Council.

The chief products of the State are grain, cotton, sugar-cane and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 288 miles in length. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carried on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 264 State Lancers and 250 State Infantry.

Population (in 1921) was 426,404 of whom 86 per cent. were Hindus and 8 per cent. Mahomedans. The average income for the last five years was Rs. 91,24,677 and the average expenditure Rs. 83,11,480.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles exclusive of the Dhrangadhra portion of the Rann of Kutch. The ruler of Dhrangadhra is the head of the Jhala family of Rajputs, originally called the Makvanas. This Rajput clan is of great antiquity having migrated to Kathiawar from the North, establishing itself first at Patri in the Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar they had to suffer repeatedly from the successive inroads of the Mahomedans into that Peninsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad, its surrounding territories and the salt-pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb. The States of Vankaner, Limbdi, Wadhwan, Chuda, Sayla and Than-Lakhtar are offshoots from Dhrangadhra. His Highness Maharana Shri Sir Ghanshyamsinhji, G.C.I.E., K.C.S.I., Maharaja Raj Saheb, is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the Maharaja's directions by the Dewan Rana Shri Mansinhji S. Jhala, C.I.E. The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds. Excellent building and ornamental stone is quarried from the hills situated within the State. Wadagra salt of an excellent quality with Magnesium chloride and other bye-products of salt are also manufactured at the State Salt works at Kuda which offer practically inexhaustible supplies for their manufacture. The capital town is Dhrangadhra, a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad, a distance of 40 miles, which is worked by the B. B. &. C. I. Railway. An extension of this line to Maliya is under contemplation. A railway siding has been laid from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State.—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Thakore Saheb the present Ruler being H. H. Shri Bhagwat Sinhji, G.C.I.E., The early founder of the State Kumbhoji I., had a modest estate of 20 villages. Kumbhoji II., the most powerful Chief of the House, widened the territories to almost their present limits by conquest; but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration" to get it recognised as a First Class State. The State pays a tribute of Rs. 1,10,721. The chief products are cotton and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been prosecuted, and was one of the earliest pioneers of railway enterprise in Kathiawar, having initiated the Dhasa-Dhoraji line, it owns the Dhasa-Jam Jodhpur section called the Gondal Railway and manages it along with the Jetalsar-Rajkot Railway and H. H. Gaekwad's Khijadiya-Dhari line; it subsequently built the Jetalsar-Rajkot Railway in partnership with other Native States in Kathiawar. There are no export and import dues, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect

of the spread of education. Compulsory female education in the State has been recently ordered by His Highness. Rs. 25 lakhs have been spent on irrigation tanks and canals, water supply and electricity to the town of Gondal. The Capital is Gondal, a fortified town on the line between Rajkot and Jetalsar.

Junagadh State.—A first class State under the Western India States Agency and lies in the South-Western portion of the Kathiawar Peninsula between 24°-44′ and 21°-53′ North latitude; 80° and 72 East longitude with the Halar division of the province as its northern boundary and Gohilwad Prant to its east. It is bounded on the south and west by the Arabian sea. The State is divided into 13 Mahals. It has 16 ports of which the principal are Veraval and Mangrol. The principal rivers in the State are the Bhadar, Uben, Ozat, Hiran, Saraswati, Machhundri, Singaoda, Meghal, Vrajmi, Rival and Sabli. The principal town of Junagadh, which is one of the most picturesque towns in India, is situated on the slope of the Girnar and the Datar Hills, while in antiquity and historical interest it yields to none. The Upperkote or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honeycombed with caves of their remains. There are a number of fine modern buildings in the town. The famous Ashoka inscription of the Buddhist time carved out on a big bolster of black granite stone is housed at the foot of the Girnar Hill, which is sacred to the Jains, the Shivaites, the Vaishnavites and other Hindus. To the south-east of the Girnar Hill lies the extensive forest of the Gir comprising 494 square miles, 823 acres and 10 gunthas. It supplies timber and other natural products to the residents of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,336.9 square miles and the average revenue amounts to about Rs. 73,00,000. The total population according to the census of 1921 was 4,65,493 of which 3,68,003 were Hindus 90,091 Mahomedans 7,216 Jains, 90 Christians, 53 Parsis while 40 were of other castes. Until 1472 when it was conquered by Sultan Mahomed Begra of Ahmedabad Junagadh was a Rajput State ruled by Chiefs of the Chuda Sama tribe. During the reign of theEmperor Akbar it became a dependency of Delhi under the immediate authority of Moghal Viceroy of Gujarat. About 1735 when the representatives of the Moghals had lost his authority in Gujarat, Sherkhant Babi, the ancestor of the present Babi Ruler, expelled the Moghal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton. bajri, juwar, sesamum, wheat, rice, sugarcane, cereals, grass, timber, stone, castor-seed, fish, country tobacco, groundnuts, cocoanuts, bamboos, etc., while those of manufacture are ghee, molasses, sugar candy, copper, and brassware, dyed cloth, gold and silver embroidery, pottery, hardware leather, bamboo furniture, etc. The State pays a tribute of Rs. 28,394 annually to the Paramount Power and Peshkashi of Rs. 38,210 to His Highness the Gaekwar on the other hand, the State of Junagadh receives atribute styed Zortalbi amounting to Rs. 92,421 from not less than 134 States and Talukas, a relic of the day of Mahomedan supremacy. The State maintains Junagadh State Forces and the Mahabat Khanji Infantry, the sanctioned strength of the former being 173 and of the latter 220 inclusive of Bag-pipe Band.

The Chief bears the title of Nawab. The present Nawab is His Highness Sir Mahabat Khan III, K.C.S.I., and is the ninth in succession and seventh in descent from His Highness Nahadurkhanji I, the founder of the Babi Family of Junagadh in 1735 A. D. His Highness the Nawab Saheb was born on 2nd August 1900 and succeeded to the *gadi* in 1911, visited England in 1913-14, received his education at the Mayo College, Ajmer, and has been invested with full powers since March 1920. His Highness the Nawab Saheb is the Ruler of the Premier State in Kathiawar, ranks first amongst the Chiefs of Kathiawar, exercising plenary powers and enjoys a salute of 15 guns personal, 13 permanent and 15 local within the territorial limits of the Junagadh State. Languages Spoken:—Gujarati and Urdu.

Capital:—Junagadh.
Ruler:—His Highness Sir Mahabat Khanji Rasulkhanji, K.C.S.I.,

Heir-Apparent-Mahomed Dilawarkhanji, Prince Mahomed Himatkhanji.

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Navanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas then established at Ghumli. The town of Jamnagar was founded in 1540. The present Jam Sahib is the well-known cricketer, H. H. Jam Sahib Shri Ranjitsinhji Vibhaji, who was born in 1872 and succeeded in 1907. The principal products are grain, cotton and oil-seeds, shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs. 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains two squadrons of Nawanagar State Lancers. The Capital is Jamnagar, a flourishing place, nearly 4 miles in circuit, situated 5 miles east of the port of Bedi. Population 345,353. Revenue nearly Rs. 80 lakhs.

Revenue Secretary: Gokulbhai B. Desai, Bar.-at-law.

Political Secretary: Parshuram B. Junnarkar, B.A., LL.B.

General Secretary: Hirabhai M. Mehta, B.A. (Cantab.), Bar.-at-law.

Cutch.—The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 7,616 square miles. The capital is Bhuj, where the ruling Chief (the Maharao) His Highness Maha Rao Sri Khengarji Savai Bahadur, G.C.S.I., G.C.I.E., resides. From its isolated position, the special character of its people, their peculiar dialect, and their

strong feeling of personal loyalty to their ruler, the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or 'children of Jada'. The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own Estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the State now pays Rs. 82,257 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which, there are some irregular infantry, and the Bhayats could furnish on requisition a mixed force of four thousand.

Palanpur Agency.—This group of States in Gujarat comprises two first class States, Palanpur and Radhanpur, and a few minor States and petty talukas. Its total area is 6,393 square miles and the population is 518,566. The gross revenue is about 27 lakhs. The territory included in the Agency has, like the more central parts of Gujarat, passed during historical times under the sway of the different Rajput dynasties of Anhilvada, the early Khilji and Tughlak Shahi dynasties of Delhi, the Ahmedabad Sultans, the Mughal Emperors, the Mahrattas, and lastly the British. The State from which the Agency takes its name is under the rule of Captain His Highness Zubda-tul-Mulk Dewan Mahakhan Taley Muhammad Khan Bahadur, K.C.I.E., K.C.V.O., Nawab of Palanpur. His Highness is descended from the Usafzai Lohani Pathan, an Afghan tribe who appeared in Gujarat in the 14th century. The connection of the British Government with the State dates from 1819 in which year the Ruler was murdered by a body of nobles. Two high roads from Ahmedabad pass through the State and a considerable trade in cloth, grain, sugar and rice is carried on. The State pays tribute of Rs. 38,462 to the Gaekwar of Baroda. The capital is Palanpur situated on the B. B. & C. I. Railway, and is the junction station of the Palanpur-Deesa Branch of B. B. & C. I. Railway. It is a very old settlement of which mention was made in the 8th century.

Radhanpur is a first-class State, with an area of 1,150 square miles, which is held by a branch of the illustrious Babi family, who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H. H. Jalalud-din Khanji, the Nawab of Radhanpur. The State maintains a Police force of 209. The principal products are cotton, wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern Gujarat and Cutch. Sami has a cotton press and three ginning factories. There is one ginning factory at Munjpur and 1 at Lolada.

STATES IN THE BOMBAY PRESIDENCY.

The territories under the rule of Indian Princes and Chiefs in the Bombay Presidency extend over an area of 28,039 square miles. The characteristic feature of the Bombay States is the great number of petty principalities. The recognition of these very numerous jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. In no part of India is there a greater variety of principalities. Some of the largest are of modern origin, having been founded by the Marathas in the general scramble for power in the middle of the 18th century but the Rajput houses in the Gujarat Agencies date from earlier times. Interesting traces of ancient history are to be found at Sachin and Janjira, where Chiefs of foreign ancestry, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal Chiefs-Bhils or Kolis exercise very limited authority in the Dangs and the hilly country that fringes the Mahi and the Narbada rivers.

The variety of the relations which under the terms of the several treaties, subsist between the British Government and the rulers of the different States, and the general superintendence exercised by Government as the Paramount Power, necessitate the presence of an Agent or representative of Government at the Principal Courts. The smaller and less important States are either grouped together under the general supervision of a Political Agent or are looked after by the Collectors of the districts which they adjoin. The position of the Agent varies, roughly speaking, with the importance of the State. In some cases he does little more than give advice and exercise a general surveillance. In other cases the Agents are invested with a direct share in the administration, while States the Rulers of which are minor are directly managed by Government Officers or under arrangements approved by Government. Some of the States are subordinate to other States and not in direct relations with the British Government. In these cases the status of the feudatories is usually guaranteed by Govern-

ment. The powers of the Chiefs are regulated by treaty or custom, and range downwards to a mere right to collect revenue in a share of a village, without criminal or civil jurisdiction, as in the case of the petty Chiefs in the Mahi Kantha and Rewa Kantha Agencies.

The number of Indian States in the Bombay Presidency is 151, with an area of 28,039 square miles and population (1921) of 3,879,095. They are divided for administrative purposes into the following Agencies: Belgaum Agency, Savantvadi; Bijapur Agency, Jath: Dharwar Agency, Savanur: Kaira Agency, Cambay: Kolaba Agency, Janjira: Kolhapur Residency and Southern Maratha Country States Agency, 9 States (Kolhapur with 9 feudatories), Jamkhandi, Kurundwad Senior, Kurundwad Junior, Miraj Senior, Miraj Junior, Mudhol, Ramdurg and Sangli): Mahi Kantha Agency 51 States (principal States Idar and Danta): Nasik Agency Surgana: Poona Agency, Bhor: Rewa Kantha Agency, 62 States (principal States; Balasinor, Baria, Chhota Udeipur, Lunawada, Rajpipla and Sant): Satara Agency, Aundh and Phaltan: Sholapur Agency, Akalkot: Sukkur Agency, Khairpur: Surat Agency, 3 States (Bansda, Dharampur and Sachin) and 14 Dang Chiefs: Thana Agency, Jawhar. The table below gives details of the area of the more important States:—

State.	Area in sq. miles.	Population (in 1921).	Approximate Revenue.
			Rs.
Balasinor ..	189	44,030	2,51,000
Bansda ..	215	40,125	8,03,973
Baria	813	137,291	8,26,000
Bhor	925	130,420	6,00,000
Cambay ..	350	71,715	9,00,860
Chhota Udeipur	890	125,702	12,41,000
Danta	347	19,541	1,87,700
Dharampur ..	704	95,171	12,53,560
Idar	1,669	226,355	13,22,300
Janjira ..	324	87,534	6,65,000
Jawhar ..	310	49,662	6,06,000
Khairpur ..	6,050	193,152	21,33,886
Kolhapur ..	3,217	833,726	1,12,71,000
Lunawada ..	388	83,133	7,75,000
Mudhol ..	368	60,140	4,72,000

Bijapur Agency.—This comprises the Satara Jaghir of Jath (980·8 square miles in area). On the annexation of Satara, in 1849, Jath and Daphlapur like other Satara Jaghirs, became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppression on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small estate of Daphlapur with an area of 96·8 square miles lapsed to the Jath Jaghir on the demise of its last ruler Ranibai Saheb Daphle in January 1917. The Chief of Jath who belongs to the Mahratta caste, ranks as a first class Sardar. He holds a sanad of adoption, and the succession follows the rule of primogeniture. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs. 6,400 per annum in lieu of horse contingent and Rs. 4,847 on account of Sardeshmukhi rights.

Political Agent.—V. H. Naik, M. A., Bar-at-Law, Collector of Bijapur.

Dharwar Agency.—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jagirdar of Emperor Aurangzeb. At the close of the last Maratha War the Nawab of Savanur, whose conduct had been exceptionally loyal, was confirmed in his possessions by the British Government. The State pays no tribute. The principal crops are jowari and cotton. The area is 70 square miles and population 16,830. The revenue is Rs. 2,15,764-11-7. The present chief is Captain Meherban Nawab Abdul Majid Khan Diler Jang Bahadur, Nawab of Savanur.

Political Agent: A. Master, I.C.S.

Kaira Agency.—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Anhilvada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India: at the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1730, the founder of the present family of Chiefs being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussein Yawar Khan who is a Shiah Mogul of the Najumisani family of Persia, and was born on the 16th May 1911. His father, the late Nawab Jaffar Ali Khan, died on 21st January 1915, leaving him a minor. The State is therefore under British Administration. The State pays a tribute of Rs. 21,924 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay *via* Petlad, connecting with the B. B. & C. I. Railway at Anand. Cambay is a first class State having full jurisdiction. Revenue is about eight lakhs. The area of the State is 350 square miles, population 71,715.

Political Agent: M. S. Jayakar, M.A.

Administrator: V. K. Namjoshi.

Mahi Kantha.—This group of States has a total area of 3,124 square miles and a population of 450,478, including that of **Idar**, which is 226,351. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. Idar covers more than half the territory. It has an area of 1,668 square miles and an average revenue of Rs. 16,47,379. The present Ruler of Idar, Lieutenant-Colonel H. H. Maharaja Sir Dowlat Singhji, K.C.S.I., is a Rajput of the Rathod clan. He was born in 1878 and ascended the Gadi in 1911. His Highness had been on active service in Egypt during the great war. The subordinate feudatory Jagirdars are divided into 3 classes. The Jagirdars comprised in the class of Bhayats are cadets of the Ruling House to whom grants have been made in maintenance or as a Jivarak. Those known as Sardar Pattawats are descendants of the military leaders who accompanied Anand Singh and Rai Singh, the founder of the present Marwar dynasty when they took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Anand Singh in 1741 A. D. on condition of military service. In the class of the Bhoomias are included all subordinate Feudatories who were in possession of their Pattas prior to the advent of the present Marwar dynasty. The Pattas which they hold were acquired by their ancestors by grant from the former Rao rulers of the State. The Maharaja receives Rs. 52,427 annually on account of Khichdi and other Raj-Haks from its subordinate Sardars, the tributary Talukas of the Mahi Kantha Agency and others and pays Rs. 30,340 as Ghasdana to Gaekwar of Baroda through the British Government. Of the smaller states Polo and Danta are two important second class States. The names of their Chiefs are Rao Shri Hamir Singhji and Maharana Shri Bhawani Singhji. Nine other States are of some importance and the remainders are estates belonging to Rajput or Koli Thakurs, once the lawless feudatories of Baroda and still requiring the close supervision of the Political Officer.

Political Agent—Major J. De La Hay Gordon, O.B.E., M.C.

Nasik Agency.—This consists of one State Surgana, lying in the north-west corner of the Nasik District. Surgana has an area of 360 square miles and a population of 14,912. The ruling chief is Prataprao Shankarrao Deshmukh, who is descended from a Maratha Pawar family. He rules the State subject to the general control of the Collector and Political Agent Nasik. The revenue of the State is Rs. 66,893

Rewa Kantha Agency.—This Agency, with an area of 4,956 square miles and a population of 665,099, comprises 61 States, of which Rajpipla is a first class State, 5 are second class, one is third class and the rest are either petty States or talukas. Among those petty States are Sanjeli in the north, Bhadarva and Umeta in the west, Jambhughoda in the south-east, and two groups of Mehwas. The 26 Sankheda Mehwas petty estates lie on the right bank of the Narbada, while the 24 Pandu Mehwas petty estates including Dodka, Anghad and Raika, which together form the Dodka Mehwas are situated on the border of the Mahi.

The following are the statistics of area and population for the principal States:—

State.	Area in square miles.	Population.
Balasinor	189	44,039
Bariya	813	137,291
Chhota Udaipur	873	125,702
Lunavada	388	83,136
Narukot (Jambhughoda) ..	143	9,540
Rajpipla	1,517	168,425
Sunt	394	70,957
Other Jurisdictional States, Civil Stations and Thana Circles	639	113,977

Under the first Anhilvada dynasty (746-961) almost all the Rewa Kantha lands except Champaner were under the government of the Bariyas, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood, driven south and east by the pressure of Muhammadan invasions, took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Maharaja of Rajpipla, a Gohel Rajput.

Rajpipla.—This State lies to the south of the Narbada. It has an area of 1,517½ square miles. The lands are rich and very fertile and except a few forest-clad hills are suitable and available for cultivation in large quantities in the south-east talukas. The family of the Maharaja of Rajpipla, Captain H. H. Maharana Shri Sir Vijayasinjhi, K.C.S.I., is said to derive its origin from a Rajput of the Gohel clan. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Rajpipla which is connected with Anklesvar by railway built by the State.

Satara Jahagirs.—Under this heading are grouped the following States:—

State.	Area in sq. miles.	Population.	Revenue in lakhs.
			Rs.
Aundh	501	64,560	3
Phaltan	397	43,286	3
Bhor	925	130,420	5
Akalkot	498	81,250	9
Jath	981	82,654	3½

Kolaba Agency.—This Agency includes the State of **Janjira** in the Konkan, a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point in its history is the successful resistance that it alone, of all the States of Western India, made against the determined attacks of the Marathas. The British, on succeeding the Marathas as masters of the Konkan, refrained from interfering in the internal administration of the State. The chief is a Sunni Mahomedan; by race a Sidi or Abyssinian, with a title of His Highness the Nawab. He has a sanad guaranteeing succession according to Mahomedan law and pays no tribute. Till 1868 the State enjoyed singular independence, there being no Political Agent, and no interference whatever in its internal affairs. About that year the maladministration of the chief, especially in matters of police and criminal justice, became flagrant; those branches of administration were in consequence taken out of his hands and vested in a Political Agent. The last ruler, H. H. Nawab Sidi Sir Ahmed Khan, G.C.I.E., died on 2nd May 1922, and was succeeded by his son Sidi Muhammad Khan, born on the 7th March 1914. The area of the State is 377 square miles, and the population 98,530. The average revenue is 8 lakhs, including that derived from a small dependency named Jafferabad in the south of Kathiawar under the Kathiawar Agency. The State maintains an irregular military force of 231. The capital is Murud on the main land, the name of Janjira being retained by the island fort opposite. The Chief is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war the last ruler's salute was raised on the 1st January 1918 to 13 guns personal and 13 permanent within the limits of his own State from the 1st January 1921. The State is now under a minority administration with the minor Nawab's mother as Regent, assisted by a Dewan appointed with the approval of Government. The present Dewan is Mr. P. R. Kapadia, B.A., a retired Deputy Collector.

Kolhapur Agency.—Kolhapur is a State with an area of 3,217 square miles and population of 833,726. Subordinate to Kolhapur are nine feudatories, of which the following four are important: Vishalgarh, Bavda, Kagal (senior), and Ichalkaranji. The ruling house traces its descent from a younger son of Shivaji, founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1765, and again in 1792, when the Raja agreed to give compensation for the losses which British merchants had sustained since 1785, and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1812 a treaty was concluded with the British Government, by which, in return for the cession of certain ports, the Kolhapur Raja was guaranteed against the attacks of foreign powers; while on his part he engaged to abstain from hostilities with other States, and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice, joowar and sugar-cane and the manufactures are coarse cotton and woollen cloths, pottery and hard ware. The State pays no tribute, and supports a military force of 692. The nine feudatory estates are administered by their holders, except in the case of two whose holders are minors. Kolhapur proper is divided into seven pethas or talukas and three mahals and is managed by the Maharaja, who has full powers of life and death. The Southern Mahratta Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

Resident and Senior Political Agent for Kolhapur and the Southern Mahratta Country.—Major L. E. Lang, C. I. E., M. C.

Southern Maratha Country States.—The Agency consists of the following eight States:—

Name of State.	Area in square miles.	Population.	Tribute to British Government.	Average revenue.
			Rs.	Rs.
Sangli	1,136	221,321	1,35,000	13,60,872
Miraj (Senior)	342	82,580	12,558	4,31,204
Miraj (Junior)	196½	34,665	7,389	3,52,382
Kurundwad (Senior)	182⅘	38,760	9,619	3,56,250
Kurundwad (Junior)	114	34,288	....	2,70,928
Jamkhandi	524	101,195	20,516	9,44,310
Mudhol	368	60,140	2,672	4,80,599
Ramdurg	169	33,997	....	3,69,483
Total ..	3,032	606,946	1,87,754	45,66,028

Mahi Kantha.—This group of States has a total area of 3,124 square miles and a population of 450,478, including that of **Idar**, which is 226,351. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. Idar covers more than half the territory. It has an area of 1,668 square miles and an average revenue of Rs. 16,47,379. The present Ruler of Idar, Lieutenant-Colonel H. H. Maharaja Sir Dowlat Singhji, K.C.S.I., is a Rajput of the Rathod clan. He was born in 1878 and ascended the Gadi in 1911. His Highness had been on active service in Egypt during the great war. The subordinate feudatory Jagirdars are divided into 3 classes. The Jagirdars comprised in the class of Bhayats are cadets of the Ruling House to whom grants have been made in maintenance or as a Jivarak. Those known as Sardar Pattawats are descendants of the military leaders who accompanied Anand Singh and Rai Singh, the founder of the present Marwar dynasty when they took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Anand Singh in 1741 A. D. on condition of military service. In the class of the Bhoomias are included all subordinate Feudatories who were in possession of their Pattas prior to the advent of the present Marwar dynasty. The Pattas which they hold were acquired by their ancestors by grant from the former Rao rulers of the State. The Maharaja receives Rs. 52,427 annually on account of Khichdi and other Raj-Haks from its subordinate Sardars, the tributary Talukas of the Mahi Kantha Agency and others and pays Rs. 30,340 as Ghasdana to Gaekwar of Baroda through the British Government. Of the smaller states Polo and Danta are two important second class States. The names of their Chiefs are Rao Shri Hamir Singhji and Maharana Shri Bhawani Singhji. Nine other States are of some importance and the remainders are estates belonging to Rajput or Koli Thakurs, once the lawless feudatories of Baroda and still requiring the close supervision of the Political Officer.

Political Agent—Major J. De La Hay Gordon, O.B.E., M.C.

Nasik Agency.—This consists of one State Surgana, lying in the north-west corner of the Nasik District. Surgana has an area of 360 square miles and a population of 14,912. The ruling chief is Prataprao Shankarrao Deshmukh, who is descended from a Maratha Pawar family. He rules the State subject to the general control of the Collector and Political Agent Nasik. The revenue of the State is Rs. 66,893

Rewa Kantha Agency.—This Agency, with an area of 4,956 square miles and a population of 665,099, comprises 61 States, of which Rajpipla is a first class State, 5 are second class, one is third class and the rest are either petty States or talukas. Among those petty States are Sanjeli in the north, Bhadarva and Umeta in the west, Jambhughoda in the south-east, and two groups of Mehwas. The 26 Sankheda Mehwas petty estates lie on the right bank of the Narbada, while the 24 Pandu Mehwas petty estates including Dodka, Anghad and Raika, which together form the Dodka Mehwas are situated on the border of the Mahi.

The following are the statistics of area and population for the principal States:—

State.	Area in square miles.	Population.
Balasinor	189	44,030
Bariya	813	137,291
Chhota Udaipur	873	125,702
Lunavada	388	83,136
Narukot (Jambhughoda) ..	143	9,540
Rajpipla	1,517	168,425
Sunt	394	70,957
Other Jurisdictional States, Civil Stations and Thana Circles	639	113,977

Under the first Anhilvada dynasty (746-961) almost all the Rewa Kantha lands except Champaner were under the government of the Bariyas, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood, driven south and east by the pressure of Muhammadan invasions, took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Maharaja of Rajpipla, a Gohel Rajput.

Rajpipla.—This State lies to the south of the Narbada. It has an area of 1,517½ square miles. The lands are rich and very fertile and except a few forest-clad hills are suitable and available for cultivation in large quantities in the south-east talukas. The family of the Maharaja of Rajpipla, Captain H. H. Maharana Shri Sir Vijayasinjhi, K.C.S.I., is said to derive its origin from a Rajput of the Gohel clan. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Rajpipla which is connected with Anklesvar by railway built by the State.

Satara Jahagirs.—Under this heading are grouped the following States:—

State.	Area in sq. miles.	Population.	Revenue in lakhs.
			Rs.
Aundh	501	64,560	3
Phaltan	397	43,286	3
Bhor	925	130,420	5
Akalkot	498	81,250	9
Jath	981	82,654	3½

These were formerly feudatory to the Raja of Satara. In 1849 five of them, including the Daflapur Estate, which has since reverted to the Jath State, were placed in relations with the Collector of Satara, and Akalkot with the Collector of Sholapur. Subsequently, the Jahagir of Bhor was transferred to the Collector of Poona, and Jath to the Agency for the Southern Mahratta Country States. The latter has since been placed in relation with the Collector of Bijapur. The ruling Chiefs are as follows:—

State.	Ruling Chiefs.	Tribute to British Government.
		Rs.
Aundh	Meherban Bhavanrao Shrinivasrao *alias* Bala Saheb, Pant Pratinidhi.	....
Phaltan	2nd-Lieutenant Meherban Malojirao Mudhojirao *alias* Nana Saheb Naik Nimbalkar.	9,600
Bhor	Meherban Raghunathrao Shankarrao *alias* Baba Saheb, Pant Sachiv.	4,684
Akalkot	Meherban Shrimant Vijayasinh Fatehsinh Raje Bhonsle Raje Saheb of (minor).	14,592
Jath	Meherban Ramrao Amritrao *alias* Aba Saheb Dafle	10,129

Sawantwadi.—This State has an area of 925 square miles and population of 206,440. The average revenue is Rs. 7,76,820. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions take the history of the State back to the sixth century. So late as the nineteenth century the ports on this coast swarmed with pirates and the country was very much disturbed. The present Chief is Khem Sawant V *alias* Bapu Saheb Bhonsle. Rice is the principal crop of the State, and it is rich in valuable teak. The sturdy Marathas of the State are favourite troops for the Indian Army and supply much of the immigrant labour in the adjacent British districts. The Capital is Sawantwadi, also called Sundar Wadi, or simply Wadi.

Sholapur Agency.—This contains the State of Akalkot which forms part of the table land of the Deccan. It has an area of 498 square miles and a population of 81,250. In the beginning of the eighteenth century the Akalkot territory, which had formerly been part of the Mussulman kingdom of Ahmednagar, was granted by the Raja of Satara to a Maratha Sardar, the ancestor of the present chief, subject to the supply of a contingent of horse. In 1849 after the annexation of Satara, the Akalkot Chief became a feudatory of the British Government.

Baria.—The State has an area of 813 square miles with a population of 137,291 and is situated in the heart of the Panchmahals district. The Capital Devgad Baria is reached by road from Piplod station on the B. B. & C. I. Railway, at a distance of eight miles. The average revenue of the State is about 10 lakhs. The State enjoys plenary powers. The Ruler Captain His Highness Maharaol Shree Sir Ranjitsinhji, K.C.S.I., is the direct descendant of the Great House of Kichhi Chowhan Rajputs who ruled over Gujrat for 244 years with their capital at Champaner, with the proud title of Pavapatis. His family has the noblest historical traditions. The State pays no tribute either to the British Government or any other Indian State. He enjoys a salute of eleven guns. He served in France and Flanders in the Great European War and in the Afghan War, 1919. The staple crop is maize. The forests are rich in teakwood and all sorts of jungle produce. There is a large scope for forest industries.

The Sukkur Agency.—This consists of the Khairpur State, a great alluvial plain in Sind. It has an area of 6,050 square miles and a population of 193,152, and revenue of over 26 lakhs. The present chief, H. H. Mir Ali Nawaz Khan, belongs to a Baloch family called Talpur. Previous to the accession of this family on the fall of the Kalohra dynasty of Sind in 1783, the history of Khairpur belongs to the general history of Sind. In that year Mir Fateh Ali Khan Talpur established himself as Rais or ruler of Sind; and subsequently his nephew, Mir Sohrab Khan Talpur, founded the Khairpur branch of the Talpur family. In 1832 the individuality of the Khairpur State, as separate from the other Talpur Mirs in Sind, was recognised by the British Government in a treaty, under which the use of the river Indus and the roads of Sind were secured to the British. The chief products of the State are oil-seeds, ghee, hides, tobacco, fuller's earth, carbonate of soda, cotton, wool and grain. The manufactures comprise cotton fabrics and various kinds of silverware and metal work. There is an industrial school at the capital where lacquer work, carpets, pottery, etc., are produced. The Railway from Hyderabad to Rohri runs through the whole length of the State. The rule of the Mirs has all along been patriarchal until very recently when the present Ruler, Mir Ali Nawaz Khan Talpur, an educated

and enlightened prince, last year turned a new leaf in the administration of the State and replaced the old Vazarat system by a Council of three members, he being the President. The State supports a Military Force of 330 rank and file, composed of 216 Infantry, 72 Transport and 42 Band and Bag-pipes, including an Imperial Service Camel and Baggage Corps, which is 139 strong and served at the Front.

Political Agent: The Collector of Sukkur.

Surat Agency.—This is a small group of three second class States under the Political Agent, Surat.

State.	Ruling Chiefs.	Area in sq. miles.	Population (1921).
Dharampur ..	Maharana Shri Vijayadevji Mohandevji	704	95,171
Bansda ..	Maharaval Shri Indrasinhji Pratapsinhji	215	40,125
Sachin ..	His Highness Nawab Sidi Ibrahim Muhammad Yakut Khan Mubariqud Nasrat Daula Nasrat Jung Bahadur.	49	19,977

The joint revenue of these States is Rs. 24,64,000. Tribute is paid to the British Government of Rs. 9,154. There is also attached to this Agency a tract of country known as the Dangs, which has an area of 653 square miles and a population of 24,576 and a revenue of Rs. 24,711. The country is divided into 14 Dangs or States of very unequal area, each under the purely nominal rule of a Bhil Chief with the title of Raja, Naik, Pradhan or Povar.

Thana Agency.—This includes the State of Jawhar, in the Thana District, on a plateau above the Konkan plain. It has an area of 310 square miles and a population of 49,662 and revenue of 5,81,273. Up to 1294, the period of the first Mahomedan invasion of the Deccan, Jawhar was held by a Varli, not a Koli chief. The first Koli chief obtained his footing in Jawhar by a device similar to that of Dido, when he asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips, and thus enclosed the territory of the State. The present chief is Raja Patangsha *alias* Yeshwantrao Vikramsha, who is a minor and hence the State under British administration.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar.—This State, which at one time comprised almost the whole of the Northern Bengal, Assam and a part of Bhutan now known as the Duars, is a low-lying plain in North Bengal. It has an area of 1,307 square miles, a population of 592,989 and a revenue of nearly 42 lakhs. By the demise of the late Maharaja His Highness Maharaja Sir Jitendra Narayan Bhup Bahadur in December 1922 in England, his eldest son Yuvaraj Kumar Jagaddipendra Narayan (born on December 15, 1915) succeeded to the gadi at the age of 7, which necessitated a minority administration under the guidance of a Regent. His Highness the Maharaja belongs to the Kshatriya Varna of Kshatriya origin. The present Maharaja has three sisters Maharajkumaris Ila Devi (aetat 14), Ayesha Devi (aetat 9) and Menaka Devi (aetat 8) and one brother Maharajkumar Indrajit Narayan (aetat 10). Her Highness the Maharani Sahiba of Cooch Behar was appointed Regent under the wishes of the late Maharaja and administers the State on behalf of her minor son with a Council of Regency, comprising four members at present, of which Her Highness is the President. Cooch Behar once formed part of the famous kingdom of Kamrup. British connection with it began in 1772 when owing to inroads of the Bhutias, the assistance of the East India Company was invoked. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar, which is reached by the Cooch Behar State Railway, a branch of the Eastern Bengal State Railway System.

Tripura.—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,116 square miles and a population of 304,437. The revenue from the State is about 17 lakhs and from the Zemindaries in British India is about 13 lakhs. The present Ruler is Maharaja Manikya Bir Bikram Kishore Deb Barman Bahadur, who is a Kshatriya by caste and come of the Lunar race. He was born on 19th August 1908 and he is entitled to a salute of 13 guns. He succeeded the late Maharaja Manikya Birendra Kishore Deb Barman Bahadur on 13th August 1923. The Military prestige of Tripura dates back to the fifteenth century and a mythical account of the State takes the history to an even earlier date. Both as regards its constitution and its relations with the British Government, the State differs alike from the large Native States of India, and from those which are classed as tributary. Besides being the Ruler of Tripura, the Maharaja also holds a large landed property situated in the plains of the Districts of Tippera, Noakhali and Sylhet. This estate covers an area of 600 square miles, and is held to form with the State an indivisible Raj. Disputes as to the right of succession have occurred on the occasion of almost every vacancy

in the *gadi* producing in times gone by disturbances and domestic wars, and exposing the inhabitants to serious disorders and attacks from the Kukis, who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, til, tea and forest produce of various kinds, the traffic being carried chiefly by water. The Maharaja received full administrative powers on 19th August 1927. The State courts are authorised to inflict capital punishment.

Political Agent:—Magistrate and Collector of Tippera (Ex-officio.)

UNDER THE GOVERNMENT OF BIHAR AND ORISSA.

Under this Government there are the Chota Nagpur Feudatory States of Kharsawan and Seraikela, and the Orissa Feudatory States, 24 in number. The total area is 28,656 square miles, and the total population 3,959,669. The average revenue is Rs. 98,92,191. The inhabitants are hill-men of Kolarian or Dravidian origin and their condition is still very primitive. The Chief of **Kharsawan** belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793, when, in consequences of disturbances on the frontier of the old Jungle Mahals, the Thakur of Kharsawan and the Kunwar of Saraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chief is bound, when called upon, to render service to the British Government, but he has never had to pay tribute. His present sanad was granted in 1919. He exercises all administrative powers, executive and judicial, subject to the control of the Political Agent and Commissioner, Orissa Feudatory States. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Seraikela is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States.—This group of 24 dependent territories is situated between the Mahanadi Delta and the Central Provinces, and forms the mountainous background of Orissa. The names of the individual States are Athgarh, Talcher, Mayurbhanj, Nilgiri, Keonjhar, Pal Lahara, Dhenkanal, Athmallik, Hindol, Narsinghpur, Baramba, Tigiria, Khanpara, Nayagarh, Ranpur, Daspalla and Baud. To these there were added in 1905 the following States: Bamra, Rairakhol, Sonpur, Patna and Kalahandi from the Central Provinces, and Gangpur and Bonai from the Chota Nagpur States. The total population is 3,807,172 with an average revenue of Rs. 94,50,039. The Feudatory States have no connected or authentic history. Comprising the western and hilly portion of the province of Orissa they were never brought under the central government, but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races, who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild beasts of the forests on the other. In course of time their hill retreats were penetrated by Aryan adventurers, who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, came to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jai Singh became ruler of Mayurbhanj over 1,300 years ago, and was succeeded by his eldest son, while his second son seized Keonjhar. The Chiefs of Baud and Daspalla are said to be descended from the same stock; and a Rajput origin is also claimed by the Rajas of Athmallik, Narsinghpur, Pal Lahara, Talcher and Tigiria. Nayagarh, it is alleged, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. On the other hand, the chiefs of a few States, such as Athgarh, Baramba and Dhenkanal, owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient, the list of its chiefs covering a period of over 3,600 years. It is noteworthy that this family is of Khond origin, and furnishes the only known instance in which, amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders; but in other respects neither the ancient kings of Orissa nor their successors, the Mughals and Marathas, ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them; but they are made up in most part of legend and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Marathas, which took place in 1803, was immediately followed by the submission of ten of the Tributary States, the Chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa; but, as they had always been tributary states rather than regular districts of the native governments, they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would preclude their being brought under the ordinary jurisdiction of the British courts, if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India, but until lately forest conservancy was practically

unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed by sanads which, in the case of Gangpur and Bonai, were last revised in 1919. and in the case of the others in 1915. They recite the rights, privileges, duties and obligations of the Chiefs, providing for the settlement of boundary disputes, and indicating the nature and extent of the control of the Political Agent and Commissioner.

Political Agent and Commissioner: J. E. Scott, O.B.E.

UNDER THE GOVERNMENT OF THE UNITED PROVINCES.

Three States: Rampur, Tehri and Benares are included under this Government:—

State.	Area Sq. Miles.	Population.	Revenue in lakhs of Rupees.
Rampur ..	892	453,607	54
Tehri (Garhwal)	4,500	318,482	14
Benares ..	875	362,735	22

Rampur State.—The State of Rampur was founded by Nawab Sayed Ali Mohammad Khan Bahadur in the middle of the 18th century and his dominions included a considerable portion of what is now known as Rohilkhand. The founder belonged to the famous Sayeds of the Bareha clans in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered invaluable services to the Moghal Emperor who recognised him as Ruler of Rohilkhand.

Upon his death, his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Faizulla Khan Bahadur. The Province of Rohilkhand had now passed into the hands of the East India Company. Nawab Sayed Faizulla Khan Bahadur was most loyal and true to the British Government to whom he always looked up for help during those unsettled days and he gave tangible proof of his loyalty when during the war against France he offered all his cavalry 2,000 strong to the British Government in 1878 and received the following message of thanks from the then Governor-General :—

"That in his own name as well as that of the Board, he returned him the warmest thanks for this instance of his faithful attachment to the Company and the "English Nation."

Another opportunity arose for the ruler of Rampur to evince his steadfast loyalty and devotion to the Imperial Cause on the outbreak of the Mutiny of 1857. His Highness Nawab Sir Sayed Yusuf Ali Khan Bahadur occupied the Musnad of Rampur in those days. From the very start till peace was re-established in the country, he was lavish in his expenditure of men and money on the side of the British Government: he fought their battles, saved the lives of many Europeans whom he provided with money and other means of comfort and had so much established his reputation as a good administrator that he was placed in charge of the Moradabad district. These signal services were recognised by the Government by the grant of an Illaqa besides other marks of distinction.

The reign of the present ruler His Highness Nawab Sir Sayed Mohammad Hamid Ali Khan Bahadur stands out unique in many ways. Rampur has made great strides in trade and commerce, and in fact in every walk of life. His Highness takes keen interest in education and has not only contributed handsome donations but makes annual grants to the various educational institutions.

He is no whit behind his compatriots in his loyalty to the British Government. The great War of 1914 found him foremost in offering his personal services and all the resources of his State—men, money and material—to the British Government. The Rampur I. S. Infantry was sent to East Africa and returned home after nearly four years' service and won the favourable remarks of high British Officers. The Rampur Lancers also performed their allotted duties in the War. Besides the expenditure involved in this, His Highness also participated in the scheme of the Hospitalship "Loyalty" and contributed a lakh rupees towards the cost and upkeep of it. His other contributions to the various funds amount to over half a lakh of rupees and he also subscribed Rs. 7,00,000 to the two War Loans. These are some of the principal contributions made by His Highness towards the Imperial cause in the War. Afghan War of 1919 again found him prompt in his offer of assistance. This time the I.S. Lancers and the Imperial Service Infantry were sent on garrison duty in British India.

His Highness is a Knight Grand Commander of the Most Exalted Order of the Star of India and of the most Eminent Order of the Indian Empire, Knight Grand Cross of the Royal Victorian Order, a Major-General in the Indian Army and an A.D.C. to His Imperial Majesty the King Emperor. He had the unique honour of serving on His Imperial Majesty's Staff in the Coronation Durbar of 1911 at Delhi.

His Highness has three sons—Colonel Nawab Sayed Raza Ali Khan Bahadur, Heir-Apparent, Sahebzada Sayed Jafar Ali Khan Bahadur and Sahebzada Sayed Abdul Kareem Khan Bahadur. The name of His Highness's grandson—son of the Heir-Apparent—is Sahebzada Sayed Murtaza Ali Khan Bahadur.

The permanent salute of the State is 15 guns and the annual income over fifty lakhs of rupees.

Tehri State (or Tehri-Garhwal).—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history of the State is that of Garhwal District, the two tracts having formerly been ruled by the

same dynasty. Pradyumna Shah, the last Raja of the whole territory, was killed in battle, fighting against the Gurkhas; but at the close of the Nepalese War in 1815, his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859 without issue, and was succeeded by his near relative Bhawani Shah; and he subsequently received a *sanad* giving him the right of adoption. The present Raja is Captain H.H. Narendra Shah, C.S.I. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. The strength of the State forces is 130. The capital is Tehri, the summer capital being Pratapnagar, 8,000 feet above the sea-level.

Agent to the Governor-General: The Governor of the U. P. of Agra and Oudh.

Benares.—The kingdom of Benares under its Hindu Rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-Ud-din Ghori and formed a separate province of the Mohammadan Empire. In the 18th century when the powers of Moghal Emperors declined after the death of Aurangzib, Raja Mansa Ram, an enterprising zamindar of Gangapur (Benares District), founded the State of Benares and obtained a *sanad* from the Emperor Mohammad Shah of Delhi in the name of his son Raja Balwant Singh. Raja Mansa Ram died in 1740 and his son Balwant Singh became the virtual ruler. During the next 30 years attempts were unsuccessfully made by Safdar Jang and after him by Shuja-ud-daula of Oudh to destroy the independence of the Raja and the Fort of Ramnagar was built on the bank of the Ganges opposite the Benares city. Raja Balwant Singh died in 1770 and was succeeded by his son Chet Singh. He was expelled by Warren Hastings. Balwant Singh's daughter's son Mahip Narain Singh was placed on the *guddi*. The latter proved an imbecile and there was maladministration which led to an Agreement in 1794 by which the lands, held by the Raja in his own right which was granted to him by the British Government, were separated from the rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 the major portion of these Domains became a State consisting of the parganas of Bhadohi and Chakia (or Kera Mangraur). The town of Ramnagar and its neighbouring villages were ceded by the British Government to the Maharaja in 1918 and became part of the State. The Maharaja's powers are those of a ruling Chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with excise. The present ruler is Lieut.-Colonel H. H. Maharaja Sir Prabhu Narain Sigh Bahadur, G.S.C.I., G.C.I.E., LL.D., who was born in 1855 and succeeded to the State in 1889. He is entitled to a salute of 15 guns and is a Hon. Lieut.-Colonel in the Indian Army. His Heir Apparent is Maharaj Kumar Aditya Narain Singh Bahadur.

PUNJAB STATES.

The 13 Salute States of the Punjab were transferred to the Political charge of the Government of India with effect from the 1st November 1921. Area 31,264 square miles. Population (1921) 4,008,040. Revenue Rs. 3,43,60,000.

These States may be grouped under three main clasess. The Hill States which lie in the Punjab Himalayas are held by families of ancient Rajput descent. To the south-west lies the large Mohamedan State of Bahawalpur. The remaining Sikh States of Patiala, Jind, Nabha, Kapurthala and Faridkot and the Mohamedan States of Malerkotla and Loharu lie east of Lahore in the eastern plains of the Punjab.

The list below gives details of the area, population and revenue of the 13 States:—

Name.	Area in square miles.	Population (Census of 1921)	Revenue approximate in lakhs of Rupees.
Bahawalpur	15,000	781,191	48,39,000
Bilaspur (Kahlur)	448	98,000	3,00,000
Chamba	3,216	141,867	4,11,000
Faridkot	642	150,661	20,42,000
Jind	1,259	308,183	28,00,000
Kapurthala	630	284,275	37,50,000
Loharu	222	20,614	1,31,000
Malerkotla	168	80,332	14,04,000
Mandi	1,200	185,048	12,92,000
Nabha	928	263,334	23,01,000
Patiala	5,932	1,499,739	1,28,50,000
Sirmur (Nahan)	1,198	140,468	6,00,000
Suket	420	54,328	21,34,000
Total ..	31,264	4,008,040	3,43,60,000

Bahawalpur.—A Native State in direct political relationship with the Government of India through the Agent to the Governor General, Punjab States Agency. Bahawalpur is situated between the Punjab and Rajputana, Latitude 26°41′ to 30°22′ 15″, Longitude 70°47′ to 74°1′ and bounded on the North East by the District of Ferozepur; on the East and South by the Rajputana States of Bikaner and Jaisalmere on the South West by Sind, and on the North West by the Indus and Sutlej rivers. Area 15,000 square miles.

This State is about 300 miles in length and about 40 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert; the central track is chiefly desert, not capable of cultivation identical with the Bar or Pat uplands of the Western Punjab; and the third, a fertile alluvial tract in the river valley is called the Sind. The ruling family is descended from the Abasside Khalifas of Baghdad. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani empire in the Treaty of Lahore in 1809. Ranjit Singh was confined to the right bank of the Sutlej.

The first treaty with Bahawalpur was negotiated in 1833, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territory and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death the succession was disputed and for a time the administration of the State was in the hands of the British authorities. The present Nawab is Capt. H. H. Rukn-ud-Daula, Nasrat Jang, Hafiz-ul-Mulk Nawab Sir Sadiq Mohammad Khan Bahadur Abbasi V., K.C.V.O., who was born in 1904 and succeeded in 1907. During his minority the State was managed by a Council of Regency which ceased to exist in March 1924, when H.H. the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Chief Minister, Captain Sardar Sikander Hyat Khan, K.B., M.B.E., M.L.C., a Public Works and Revenue Minister, Mr. C. A. Barron C.S.I., C.I.E., C.V.O., F.R.G.S., and a Home Minister, Moulvi Ghulam Hussain Qureshi Hashmi.

The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North Western State Railway passes through the State. The State supports an Imperial Service combined Infantry, in addition to other troops. The capital is Bahawalpur, a walled town built in 1748.

Income from all sources about 50 lakhs. Languages spoken Multani or Western Punjabi (Jatki), Sindhi and Marwari.

Agent to the Governor-General, Punjab States:—Mr. J. A. O. Fitzpatrick, B.A. LL.B. C.I.E., C.B.E., I.C.S.

Chamba.—This State is enclosed on the west and north by Kashmir, on the east and south by the British districts of Kangra and Gurdaspur, and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicle have been compiled.

Founded probably in the sixth century by Marut, a Surajbansi Rajput, who built Brahmapura, the modern Barmaur, Chamba was extended by Meru Varma (680) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence, until the Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now stand, and it was declared independent of Kashmir. The present chief is H. H. Raja Ram Singh, who was born in 1891, and succeeded in 1919. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years, but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North-Western Railway. Chamba town, on the right bank of the Ravi, contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century, is the most famous.

Faridkot.—The ruling family of this sandy level tract of land belongs to the Sidhu-Barar clan of the Jats, and is descended from the same stock as the Phulkian houses. Their occupation of Faridkot and Kot Kapura dates from the time of Akbar, though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present Ruling Prince, Farzand-i-Saadat Nishan Hazarat-i-Kaisar-i-Hind Brar Bans Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President, Sardar Bahadur Sardar Indar Singh, B. A., and four members. The State has an area of 643 square miles with a population of 150,661 and has an annual income of 18 lakhs. The Ruler is entitled to a salute of 11 guns and a visit and return visit from the Viceroy. The State Forces consist of State Sappers and Household Troops (Cavalry and Infantry).

Jind.—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles, with a population of 308,183 souls and an income of 25 lakhs.

The history of Jind as a separate State dates from 1763, when Raja Gajpat Singh, the maternal grandfather of Maharaja Ranjit Singh, and great grandson of the famous Phul, established his principality. He was succeeded by Raja Bhag Singh, who greatly assisted Lord Lake in 1805. His grandson Raja Sangat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square miles of land, known as Dadri territory. He was succeeded by his son. Maharaja Raghbir

Singh, who gave help to the British Government on the occasion of Kuka outbreak (1872) and the 2nd Afghan War (1878). The present ruler Maharaja Ranbir Singh was born in 1879, succeeded in 1887, and invested with full powers in 1899. The State rendered exemplary services in the Great European War. It supplied 8,673 men to the Indian Army and Imperial Service Troops and doubled the strength of its Imperial Service Infantry. The total contribution amounted to nearly 35 lakhs, in gifts of cash, materials, animals and loan.

His Highness enjoys a salute of 15 guns. The capital is Sangrur, which is connected by a State Railway with the North-Western Railway. The principal executive Officer of the State is called Chief Minister.

Ruler.—Colonel His Highness Farzand-i-Dilband Rasikh-ul-Itikad, Daulat-i-Inglishia Raja-i-Rajgan Maharaja Sir Ranbir Singh Rajendra Bahadur, G.C.I.E., K.C.S.I., etc.

Kapurthala.—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs, and from which it takes the name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Kapurthala Ruler, conditional on his paying a commutation in cash for military service engagements by which he had previously been bound to Maharaja Ranjit Singh, of Lahore. This Annual Tribute of Rs. 1,31,000 a year was remittedby the Government of India in perpetuity in (1924) in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a jaghir in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh, which yield a large annual income equal to those of Kapurthala State. The present Ruler's titles are Col. H. H. Farzand-I-Dilband Rasikhul-Itikad Daulatt I-Inglishia Raja-I-Rajagan Maharaja Jagatjit Singh Bahadur Maharaja of Kapurthala, G.C.S.I., (1911), G.C.I.E., (1918), G.B.E., (1927), who was born on 24th November 1872 and succeeded his father His Highness the Late Raja-i-Rajgan Kharak Singh of Kapurthala in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 15 guns and he was made Honorary Colonel of the 45th Rattrays Sikhs. The Maharaja received the Grand Cross of the Legion d'Honneur from the French Government in 1924, and possesses also the Grand Cross of the Order of Carlos 3rd, of Spain, Grand Cross of the Order of the Star of Roumania, Grand Cross of the Order Menelek of Abyssinia, Grand Cordon of the Order of the Nile of Egypt, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba; twice represented Indian Princes and India on the League of Nations in 1926 and 1927, celebrated the Golden Jubilee of his reign in December 1927 with great eclat, when Their Excellencies the Viceroy and Lady Irwin, the Commander-in-Chief in India and Lady Birdwood, Governor of the Punjab and Lady Hailey, Their Highnesses the Maharajas of Jammu and Kashmir, Bikaner Patiala, Jamnagar, Alwar, Bharatpur, Rajpipla, Mandi, the Nawabs of Palanpur, Malerkotla, Loharu and the Raja of Kalsia were present, besides a very large and distinguished gathering of European and Indian guests.

The rulers of Kapurthala are Rajput Sikhs and claim descent from Rana Kapur, a distinguished member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand-printed cloths. Phagwara is another important town in the State and is very prosperous on account of its grain markets and factories for manufacture of agricultural implements, and metallic utensils of household use. The situation of this town on the main railway line and the consequent facilities of export and import make its importance still greater and this is the chief commercial town in the State. The main line of the North-Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the Capital. The Imperial Service and local Troops of the State have been re-organized and are now designated as Kapurthala State Forces. The State Troops, the strength of which was raised during the Great War, to nearly 2,000, served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. Primary education is free throughout the State, and it spends a large proportion of its revenues on its education department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts modern amenities such as electric light, water-works, etc.

Political Officer: The Hon'ble Agent to the Governor- General, Punjab States, Lahore.

Malerkotla.—This State consists of a level sandy plain unbroken by a hill or stream, bounded by the district of Ludhiana on the north, by Patiala territory on the east and south and by the Ludhiana District, Patiala and Nabha territories on the west. The Rulers (Nawabs) of Malerkotla are of "Kurd" descent who came originally from the Province of "Sherwan" and settled in the town of "Sherwan" north of Persia, and after settling for a time in Afghanistan near Ghazni came to India and settled at *Maler*, the old capital of the State in 1442. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Empire began to sink into decay they gradually became independent. They were in constant feuds with the newly created adjacent Sikh States. After the victory of Laswari, gained by the British over Sindhia

in 1803 and the subjugation and flight of Holkar in 1805, when the Nawab of Malerkotla joined the British Army, the British Government succeeded to the power of the Mahrattas in the districts between the Sutlej and the Jumna. The State entered into political relations with the British Government in 1809. The present Ruler is Lt.-Col. His Highness Nawab Sir Ahmad Ali Khan, Bahadur, K.C.S.I., K.C.I.E., who was born in 1881 and succeeded in 1908. He was created Hony. Major in the Indian Army in June 1916 and promoted to the rank of Lt.-Col. in December 1919.

The chief products are cotton, sugar, poppy, aniseed, mustard, ajwain, methi, tobacco, garlic, onions and all sorts of grains.

The State maintains Sappers, Infantry, Cavalry and Artillery. The capital is Malerkotla. The population of the town is 30,000. Annual revenue of the State is about 16 lakhs.

Mandi is an Indian State in the Punjab Political Agency lying in the upper reaches of Bias river which drains nearly all its area. Its area is 1,200 square miles and it lies between 31°-23′ North Lat.; and 76°-22′ East Long.; and is bounded on the east by Kulu; on the south by Suket and on the north and west by Kangra. It has an interesting history of considerable length which finally resulted in its entering into a treaty with the British in 1846 A.D.

The present Ruler, Lieutenant His Highness Raja Jogindar Sen Bahadur, assumed full powers in February 1925. His Highness was married to the only daughter of His Highness the Maharaja of Kapurthala in February 1923 and was blessed with the birth of an heir-apparent in December 1923.

The Chief Executive Officer of the State is Rai Bahadur Dewan Dina Nath, Bar-at-Law, who has been designated as His Highness' Chief Minister. Construction work of the Kangra Valley Railway is in full swing. It is expected that the line will be open to traffic in November 1928. The Railway line will prove of considerable importance in linking Mandi with the Punjab and will materially develop its trade. The work of the Mandi Hydro-Electric Project is also in progress. This project when finished will supply electric power to practically the whole of the Punjab and will materially help in developing local industries.

The principal crops are rice, maize, wheat and millet. About three-fifths of the State are occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi, founded in 1527, which contains several temples and places of interest and is one of the chief marts for commerce with Ladhakh and Yarkand.

Nabha.—Nabha which became a separate State in 1763 is one of the 3 Phulkian States —Nabha, Patiala and Jin—and though second in point of population and revenue of the 3 sister States, it claims seniority being descended from the eldest branch. It consists of two distinct parts, the main portion comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the *Nizamats* of Phul and Amloh; the second portion forms the *Nizamat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana; this Nizamat of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The State supports one battalion of Imperial Service Infantry consisting of about 500 men. For the preservation of the peace there is a Police force consisting of about 500 men.

The State is traversed by the main and 3 branch lines of the N. W. Railway and the B. B. & C. I. crosses the *Nizamat* of Bawal. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley, to facilitate trade the Durbar has opened grain markets and Banks near the principal railway station within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and *gota*, etc. There are some ginning factories and a cotton steam press in the State which are working successfully. In 1923 an inquiry was held into certain matters in dispute between the Patiala and the Nabha Durbars which showed that the Nabha Police had fabricated cases against persons connected with the Patiala State with the object of injuring them through the Patiala Durbar. The Maharaja of Nabha who was born in 1883 and succeeded his father in 1911 entered into an agreement with the Government of India whereby he voluntarily separated himself from the administration retaining his salute and titles and the control of the State was accordingly assumed by the Government of India.

Patiala.—This is the largest of the Phulkian States, and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jaipur and Alwar States. Area 5,932 square miles. Population 1,499,739. Gross income Rs. one crore and thirty-five lakhs. Its history as a separate State begins in 1762. The present Ruler, Major-General His Highness Farz and-i-Khas Daulati-Inglishia Mansur-ul-Zaman Amir-ul-Umra Maharaja Dhiraj Rajeshwar, Sri Maharaja-i-Rajgan Sir Bhupindra Sing Mohinder Bahadur, G.C.S.I., G.C.I.E., G.C.V.O., G.B.E., A.D.C., was born in 1891 and succeeded in 1900, and assumed the reins of government in 1909 on attaining majority. His Highness the Maharaja Dhiraj enjoys at present personal salute of 19 guns and he and his successors the distinction of exemption from presenting Nazar to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar-cane, rapeseed, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Jumna Canal distributaries. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam, Sirhind, Bhatinda, Narnaul, etc. It has a Railway line of its own, known as Rajpura-Bhatinda Railway of 108 miles in length, besides this the State has undertaken the construction of a broad gauge line about 40 miles

in length to connect Sirhind and Rupar. This new line will be opened for traffic early in 1928, the North-Western Railway, the E. I. Railway, the B. B. & C. I. Railway and the J. B. Railway traverse the State. His Highness maintains a contingent of two regiments of cavalry and four battalions of infantry—one battery of Horse Artillery.

The State maintains a first grade college which imparts free education to all students. Primary education is also free throughout the State. The Durbar has recently sanctioned a scheme of compulsory education.

Since the State has entered into alliance with the British Government in 1809, it has rendered help to the British Government on all critical occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N. W. F. campaign of 1897.

On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King-Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength, contributed substantially in money and material.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all the different and principal fronts in Belgium. France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments:—(*a*) Grand Cordon of the Order de Leopold, (*b*) Grand Cross of the Legion of Honour, France, and (*c*) Grand Cross of the Order of the Crown of Italy and (*d*) Grand Cordon of the Order of the Nile, (*e*) Grand Cross of the Order of the Crown of Roumania (*f*) Grand Cross of the Order of St. Saviour of Greece (1926).

Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the frontier on the Staff of the General Officer Commanding, and the Imperial Service Contingent was on active service towards Kohat and Quetta fronts. For his services on the N.-W. Frontier His Highness was mentioned in despatches. He was elected Chancellor of the Chamber of Princes (Narendra Mandal) in 1925 and 192; and represented Indian Princes at the League of Nations at Geneva in 1925.

Sirmur (Nahan).—This is a hilly State in the Himalayas under the Political control of the Agent to the Governor-General, Punjab States, Lahore. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British, and during the second Afghan War he sent a contingent to the North-West Frontier. The present Chief is Lieut.-Colonel H. H. Maharaja Sir Amar Prakash Bahadur, K.C.S.I., K.C.I.E., who was born in 1888 and succeeded in 1911. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugarcane crushing mills. The State supports a Corps of Sappers and Miners which served in the Great War. It was captured with General Townshend's force at Kut-al-Amara but the Corps was reconstituted and sent to service.

UNDER THE GOVERNMENT OF BURMA.

The States under this Government comprise the Shan States which are included in British India though they do not form part of Burma. proper and are not comprised in the regularly administered area of the Province and the Karenni States which are not part of British India and are not subject to any of the laws in force in the Shan States or other parts of Burma

The Shan States comprise the two isolated States of Hsawnghsup and Singaling Hkamti in the Upper Chindwin District under the supervision of the Commissioner, Sagaing Division, the eight petty village communities under separate hereditary Chiefs known as Hkamti Long in the Myitkyina District and the two main division of the Shan States known as the Northern and Southern Shan States numbering six and thirty-two States respectively which are under the Commissioner, Federated Shan States.

Hsawnghsup with an area of 529 square miles and a population of 7,043 lies between the 24 and 25 parallels of latitude and on the 95 parallel of longitude between the Chindwin river and the State of Manipur.

Singaling Hkamti has an area of 983 square miles and a population of 2,287 and lies on the 26th and 90th parallels of latitude and longitude respectively.

The Hkamti Long States have an area of 200 square miles with a population of 6,520 and lie between the 27th and 28th parallels of latitude on the Upper Waters of the N'Mai branch of the Irrawaddy.

The Northern Shan States (area 20,156 square miles and population 592,813) and the Southern Shan States (area 36,157 square miles and population 847,618), form with the unadministered Wa States (area about 2,000 square

miles) and the Karenni States, a huge triangle lying roughly between the 19th and 24th parallels of latitude and the 96th and 102nd parallels of longitude with its base on the plains of Burma and its apex on the Mehkong river.

The population consists chiefly of Shans who belong to the Shan group of the Tai Chinese family; the remainder belong chiefly to the Wa-palaung and Mon Khmer groups of races of the Austro-Asiatic brand of the Austric family, or to the Karen family which Sir George Grievson now proposes to separate from the Tai Chinese family. There are also a number of Kachins and others of the Tibeto-Burman family. The Shans themselves shade off imperceptibly into a markedly Chinese race on the frontier. Buddhism and Animism are the principal religions.

The climate over so large an area varies greatly. In the narrow lowlying valleys the heat in summer is excessive. Elsewhere the summer shade temperature is usually 80 to 95 Fahr. In winter frost is severe on the paddy plains and open downs but the temperature on the hills is more equable. The rainfall varies from 50 to 100 inches in different localities.

The agricultural products of the States are rice, pulses, maize, buckwheat, cotton, sessamum, groundnuts, oranges and pineapples.

Land is held chiefly on communal tenure but unoccupied land is easily obtainable on lease from the Chiefs in accordance with special rules for non-natives of the States. Great spaces of the States are suitable for cattle, pony and mule breeding and in the Northern States Chinese settlers appear to have found the latter a very paying proposition.

The mineral resources of the States are still unexplored. The Burma Corporation have a concession for silver and lead in the Northern States which they claim to be the richest in the world. The Mawson area in the Southern States is also rich in lead. Lignite and iron ore of a low grade are found in many places.

Lashio, the headquarters of the Northern Shan States District, is the terminus of the Myohaung-Lashio Branch of the Burma Railways (178 miles) and is also connected with Mandalay by a cart road.

The Burma Corporation's narrow gauge private railway track 46 miles long connects their Bawdwin mine with the Burma Railways system at Namyao.

The Southern Shan States are served by the Burma Railways branch line Thazi to Heho (87 miles) which has recently been extended to Tayaw in the Yawnghwe plain.

Taunggyi, the headquarters of the Southern Shan States, is connected with Thazi by a well-graded motor road. The States vary much in size and importance. The largest State is Kengtung with an area of 12,400 square miles and population 208,761. The smallest State is Namtok with an area of 14 square miles and population 830.

Hsipaw with an area of 4,400 square miles and population 131,410 is the richest State with a gross revenue of Rs. 8,30,605.

The Sawbwas of Kengtung, Hsipaw and Yawnghwe and Mongnai have salutes of nine guns while the Mong Mit Sawbwa has a personal salute of the same number.

Administration.

Under the Burma Laws Act, 1898, the Civil, Criminal and Revenue administration of every Shan State is vested in the Chief of the State subject to the restrictions specified in the sanad of appointment granted to him and under the same Act the law to be administered in each State is the customary law of the State so far as it is in accordance with justice, equity and good conscience and not opposed to the law in force in the rest of British India. The customary law may be modified by the Governor who has also power to appoint officers to take part in the administration of any State and to regulate the powers and proceedings of such officers. The Chiefs are bound by their sanads to follow the advice of the Superintendents appointed but subject to certain modifications which have been made in the customary law relating to criminal and civil justice have more or less maintained the semi-independent status which was found existing at the annexation of Upper Burma.

In 1920, Sir Reginald Craddock, Lieutenant-Governor of Burma, proposed a scheme for the sanction of the Secretary of State under which the Chiefs of the Northern and Southern Shan States have agreed to federalise the departments of Government in which they had been previously largely dependent on contributions from the Provincial Funds. Under this scheme no interference is contemplated in the internal management of the States and the Chiefs continue to collect their taxes and be responsible for law and order, maintain Courts for the disposal of criminal and civil cases, appoint their own officials and control their own subjects under the advice of the Superintendents. But the Federation is responsible for the centralised Departments of Public Works, Medical, Forests, Education, Agriculture and to a small extent Police. In place of the individual tribute formerly paid by them the Chiefs contribute to the Federation a proportion of their revenue which amounts roughly to the expenditure hitherto incurred by them on the heads of administration now centralised while the Provincial Government surrenders to the Federation all provincial revenue previously derived from the States and makes an annual contribution to enable it to maintain its services at the same degree of efficiency formerly enjoyed. The Federation on the other hand pays a fixed proportion of its revenue to the Provincial Treasury as tribute in place of the individual contributions of the Chiefs. Under this scheme the Federation is a sub-entity of the Burma Government, is self-contained and responsible for its own progress. The Chiefs express their views on Federal and general matters through a Council of Chiefs consisting of all Chiefs of the rank of Sawbwa and four elected representatives of the lesser Chiefs. The Superintendents, Northern Shan States and the Commissioner of the Federated Shan States to whom the supervision of the Federation has been entrusted are *ex-officio*

members of the Council. The scheme was sanctioned and brought into force with effect from October 1922. The first meeting of the Council of Chiefs was formally opened by His Excellency the Governor Sir Spencer Harcourt Butler, G.C.I.E., K.C.S.I., I.C.S., in March 1923.

Karenni.

This district which formerly consisted of five States now consists of three as two have been amalgamated with others. It has a total area of 3,550 square miles and a population of 48,780. It lies on the south of the Southern Shan States between Siam and the British district of Toungoo. The largest State is Kantarawadi with an area of 3,000 square miles and a population of 36,621 and a revenue of nearly 1½ lakhs of rupees. More than half of the inhabitants are Red Karens. An Assistant Political Officer is posted at Loikaw subject to the supervision of the Superintendent, Southern Shan States, who exercises in practice much the same control over the Chiefs as is exercised in the Shan States though nominally they are more independent than their Shan neighbours. Mineral and forest rights however in Karenni belong to the Chiefs and not to the Government. In the past substantial contributions from Provincial revenues have been made to the Karenni Chiefs for education and medical service. The Chiefs are at present unwilling to surrender their special rights and join the Shan States Federation though very considerable advantages might accrue from their doing so.

The principal wealth of the country used to be in its teak timber and a large alien population was at one time supported by the timber trade. This has largely declined in the last few years and unless the Chiefs are prepared to deny themselves and close their forests they will soon disappear.

UNDER THE GOVERNMENT OF ASSAM.

Manipur.—The only State of importance under the Government of Assam, is Manipur which has an area of 8,456 square miles and a population of 3,84,016 (1921 Census), of which about 60 per cent. are Hindus and 34 per cent. animistic hill tribes. Manipur consists of a great tract of mountainous country, and a valley about 50 miles long and 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, in the reign of Pamheiba or Gharib Nawaz, who subsequently made several invasions into Burma. On the Burmese retaliating, Manipur negotiated a treaty of alliance with the British in 1762. The Burmese again invaded Manipur during the first Burmese war, and on the conclusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja, followed by the treacherous murder of the Chief Commissioner, Mr. Quinton, and the officers with him, and the withdrawal of the escort which accompanied him. From 1891 to 1907 the State was administered by the Political Agent, during the minority of H. H. Chura Chand Singh. The Raja was invested with ruling powers in 1907 and formally installed on the gadi in 1908. For his services during the War the hereditary title of Maharaja was conferred on him. He is entitled to a salute of 11 guns.

The administration of the State is now conducted by H. H. the Maharaja, assisted by a Durbar, which consists of a President, who is a member of the Indian Civil Service, his services being lent to the State by the Assam Government three ordinary and three additional members, who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

Khasi and Jaintia Hills.—These petty chiefships, 25 in number, with a total area of about 3,900 square miles and a population of 136,000, are included under the Government of Assam. Most of the States have treaties or engagement with the British Government. The largest of them is Khyrim, the smallest is Nonglwai, which has a population of only 246. Most of them are ruled by a Chief or Siem, The Siemship usually remains in one family. The succession was originally controlled by a small electoral body constituted from the heads of certain clans but in recent years there has been a tendency to broaden the elective basis. The constitution of a Khasi State has always been of a very democratic character, a Siem exercising but little control over his people.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES.

The Central Provinces include fifteen feudatory States subordinate to the Government with an area of 31,080 square miles and a population of 2,067,371. One of the States, Makrai, lies within Hoshangabad District; the remainder are situated in the Chhattisgarh Division, to the different districts of which they were formerly attached. Their relations with Government are controlled by a Political Agent. The States vary greatly in size and importance. Sakti, the smallest, having an area of 138 square miles and Bastar, the largest, an area of 13,062 square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in patents and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death, which require His Excellency the Governor's confirmation. But, as a fact, the Government has exercised a very large amount of control, owing mainly to the frequency with which the States have been taken under direct management, because of either the minority or the misconduct of the chief.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table:—

State.	Area.	Population. 1921.	Revenue (approximate) in lakhs.
	Sq. Miles.		Rs.
Bastar ..	13,062	464,137	8
Jashpur ..	1,963	154,156	3
Kanker ..	1,429	124,928	4
Khairagarh ..	931	124,008	6
Nandgaon ..	871	147,919	7
Raigarh ..	1,486	241,634	6
Surguja ..	6,055	378,226	6
Eight other States ..	5,283	432,363	14
Total ..	31,080	2,067,371	54

Bastar.—This State, in the south-east corner of the province, is the most important in the group. In area (13,062 square miles) it is the twelfth largest State in India, but the population in 1921 was only 464,407 and is very scattered and backward. A point of interest is that Bastar is the only State in India of which the Chief is a Hindu lady. She is the last descendant of an ancient family of Lunar Rajputs, which ruled over Warangal until the Mahommedan conquest of the Deccan in the 14th century A. D. when the brother of the last Raja of Warangal fled into Bastar and established a kingdom there. From then till the days of the Marathas the State was virtually independent, its inaccessibility securing it from all but occasional raids of Mahommedan freebooters. The Bhonslas of Nagpur imposed a small tribute on Bastar in the 18th century, and at various times for delay in payment deprived it of the Sihawa tract in the Raipur district, and allowed the Raja of Jeypore in the adjacent Vizagapatam Agency of Madras to retain possession of the Kotapad tract, originally pledged to Jeypore by a Bastar Raja for assistance during family dissensions. The dispute between Bastar and Jeypore over this land led to constant border disturbances, and was not finally settled till 1863, when the Government of India, while recognising Bastar's claim, finally made the tract over to Jeypore on the ground of long possession, on condition of payment by Jeypore of Rs. 3,000 tribute, two-thirds of which was remitted from the tribute payable by Bastar. The present tribute paid by Bastar is Rs. 20,000 a year.

On the formation of the Central Provinces, Bastar was recognised as a Feudatory State. Since then the State has made steady, if slow, progress, hampered by the innate conservatism of its aboriginal population, which has from time to time rebelled. The last rebellion, in 1910, was due to oppression by minor State officials and dislike of the rigorous forest policy then under introduction. After the rebellion the Raja had his powers reduced, and a series of Diwans was appointed by the Central Provinces Administration. The State has since his death continued to be under Government management, owing to the minority of Rani Prafulla Kumari Devi, the present Chief. The present Administrator of the State is Mr. W. V. Grigson, I.C.S., of the Central Provinces Commission. He is assisted by two sub-divisional officers, a European Medical Officer and State Engineer, a Superintendent of Police and a Forest Officer.

Nearly 11,000 square miles are covered by forest, of which about 3,000 square miles are reserves. Cultivation is therefore sparse. Rice and mustard are the chief crops. There is a large export of grain, timber and minor forest produce, particularly myrabolams. Most of the sal forest is leased to Messrs. Gillanders Arbuthnot for sleeper manufacture. The forest revenue in 1927 was just under Rs. 3 lakhs. The extension of the Salur branch of the B. N. R. to Jagdalpur and of the Raipur Forest Tramway to Kondagaon are under consideration. There are more than 600 miles of gravel motorable road in the State. The advent of the railway should lead to a great increase in the revenue of the State, and may lead to the exploitation of its great deposits of iron, manganese and tin. The revenue in 1927 was Rs. 10·33 lakhs, expenditure Rs. 8·93 lakhs and free closing balance Rs. 3·72 lakhs.

The capital, Jagdalpur, on the Indrawati River, has a population of 7,999, and is 184 miles by motorable road from Raipur in the Central Provinces, and 210 from Vizagapatam in Madras Presidency. The famous Chitrakot falls (97 ft. high) of the Indrawati are 23 miles from Jagdalpur.

Surguja.—Until 1905 this was included in Chota Nagpur State of Bengal. The most important feature is the Manipat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure; but according to a local tradition in Palamau, the present ruling family is said to be descended from a Raksel Raja of Palamau. In 1758 a Maratha army overran the State, and compelled its Chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century, in consequence of the Chief having aided a rebellion in Palamau against the British, an expedition entered Surguja; and, though order was temporarily restored, disputes again broke out between the Chief and his relations, necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness; but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Berar, and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramanuj Saran Singh Deo, C.B.E., who succeeded to the *gadi* in 1918 and enjoys full powers of a Ruling Chief.

JAMMU AND KASHMIR STATE.

The territory known generally as the Jammu and Kashmir State lies between 32° and 37° N and 73° and 80° E. It is an almost entirely mountainous region with a strip of level land along the Punjab Border, and its mountains, valleys and lakes comprise some of the grandest scenery in the world. The State may be divided physically into three areas: the upper, comprising the area drained by the River Indus and its tributaries; the middle, drained by the Jhelum and Kishenganga Rivers; and the lower area, consisting of the level strip along the southern border, and its adjacent ranges of hills. The dividing lines between the three areas are the snow-bound inner and outer Himalayan ranges known as the Zojila and the Panchal. The area of the State is 84,258 square miles. Beginning in the south where the great plain of the Punjab ends, it extends northwards to the high Karakoram mountains "Where three Empires Meet."

Briefly described, the State comprises the valleys of the three great rivers of Northern India, *viz.*, the upper reaches of the Chenab and the Jhelum, and the middle reaches of the Indus. The total population is 3,220,518 souls.

HISTORY.—Various historians and poets have left more or less trustworthy records of the history of the Valley of Kashmir and the adjacent regions. In 1586 it was annexed to the Moghul Empire by Akbar. Srinagar, the Capital, originally known as Pravarapura, had by then been long established though many of the fine buildings said to have been erected by early Hindu rulers had been destroyed by the Muhammadans who first penetrated into the Valley in the fourteenth century. In the reign of Sikandar, who was a contemporary of Tamerlane, a large number of Hindus was converted to Islam Jehangir did much to beautify the Vallley but after Aurangzeb there was a period of disorder and decay and by the middle of the eighteenth century the Suba or Governor of Kashmir had become practically independent of Delhi. Thereafter the country experienced the oppression of Afghan rule until it was rescued in 1819 by an army sent by Maharaja Ranjit Singh. The Sikh rule was less oppressive than that of the Afghans. The early history of the State as at present constituted is that of Maharaja Shri Gulab Singhji, a scion of the old Ruling Family of Jammu, who rose to eminence in the service of Maharaja Ranjit Sing of Lahore and was, in recognition of his distinguished services, made Raja of Jammu in 1820. He held aloof from the war between the British and the Sikhs, only appearing as mediator after the battle of Sobraon (1846), when the British made over to him the valley of Kashmir and certain other areas in return for seventy-five lakhs of rupees. His son, His Highness Maharaja Ranbir Singhji, G.C.S.I., G.C.I.E., a model Hindu and one of the staunchest allies of the British Government, ruled from 1857 to 1885. He did much to consolidate his possessions and evolve order in the frontier districts. He was succeeded by this eldest son His Highness Maharaja Sir Pratap Singhji, G.C.S.I., G.C.I.E., G.B.E., who died on 23rd December 1925 and was succeeded by His Highness the present Maharaja. Shri Harisinghji Bahadur.

The most notable reform effected in the State during the reign of the late Maharaja was the Land Revenue Settlement originally carried out under Lawrence and revised from time to time.

ADMINISTRATION.—For some years after the accession to the *gadi* of the late Maharaja, the administration of the State was conducted by a Council over which the Maharaja presided. In 1905 this Council was abolished and the administration of the State was thenceforward carried on by His Highness the Maharaja with the help of a Chief Minister and a number of Ministers in charge of different portfolios. This system continued until the 24th January 1922 when an Executive Council was inaugurated. Very recently, certain modifications have been introduced in the Constitution as a result of which the contact of His Highness with the administration of the State has become more direct and intimate.

The British Resident has his headquarters at Srinagar and Sialkot and there is also a Political Agent at Gilgit. A British Officer is stationed at Leh to assist in the supervision of the Central Asian Trade with India which passes through Kashmir.

In the Dogras the State has splendid m[illegible]ia for the Army which consists of 7,798 troops. Besides this, thousands of Dogras serve in the Indian Army.

FINANCE.—The financial position of the State is strong. The total revenue is about Rs. 2,25,00,000; the chief sources being land forests, customs and excise and Sericulture. There is a big reserve and no debt.

PRODUCTION AND INDUSTRY.—The population is pre-eminently agricultural and pastoral. The principal food crops are rice, maize and wheat. Oilseed is also an important crop. Barley, cotton, saffron, tobacco, beans, walnuts, almonds and hops are also grown. Pears and apples, the principal fruits of the Valley, are exported in large quantities. The State forests are extensive and valuable. The principal species of timber trees are deodar, blue pine and fir. The most valuable forests occur in Kishtwar, Karnah and Kamraj Ilaqas. A survey of the mineral resources of the State is being conducted under an expert. The most noteworthy of the minerals are bauxite, coal, fuller's earth, kaolino, slate, zinc, copper and talc. Gold is found in Baltistan and Gilgit, sapphires in Paddar, aquamarines in Skardu and lead in Uri. The silk filature in Srinagar is the largest of its kind in the world. Manufacture of silk is a very ancient industry in Kashmir. Zain-ul-Abidin who ruled from 1421 to 1472 is said to have imported silk weavers from Khurasan and settled them here. Woollen cloth, shawls, papier machi and wood carving of the State are world-famous. The State participated in the British Empire Exhibition of 1924. The Kashmir Court was styled "The Gem Of The Smaller Courts" and attracted many visitors.

COMMUNICATIONS.—Great efforts have been made and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley road (196 miles) which links the Kashmir Valley with the Punjab and the North-Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Banihal Cart Road, 205 miles long, which has recently been completed, joins Kashmir with the North Western Railway system at Jammu-Tawi and is also a fine motorable road.

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh. Internal village communications have also been much improved.

The Jammu-Suchetgarh Railway, a section of the Wazirabad-Sialkot branch line of the North Western Railway system, is the only Railway in the State. The mountainous nature of the country has made the extension of the line into the heart of the State so far impracticable.

PUBLIC WORKS.—In 1904 a flood spill channel above Srinagar was constructed to minimise the constant danger of floods in the River Jhelum and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the River Jhelum by dredging, which has been taken in hand. It is interesting to know that dredging operations were once before carried out in the reign of Avantivarman (A.D. 855-883) by his engineer Suyya near Sopore, with the same object. Good progress has been made with irrigation but the most important scheme of recent years has been the installation of a large Electric Power Station on the Jhelum River at Mahora which was completed in 1907.

EDUCATION.—Of the total population of 3,259,527 excluding the frontier ilaqas where literacy is not recorded, there are 72,228 persons who are able to read and write, of whom 4,007 only are females. In other words, 26 out of every 1,000 persons aged five or more can read and write. Among males 46 in every 1,000 are literate. The number of educational institutions including two Arts Colleges and two technical institutes is 784 and is being steadily increased.

THE CHAMBER OF PRINCES.

The Report on Indian constitutional reforms by Mr. Montagu and Lord Chelmsford stated that it was desired to call into existence a permanent consultative body which would replace the conference of Princes which had periodically met at the invitation of the Viceroy. After pointing out the need for regular meetings of the Council, the Report said:—"We contemplate that the Viceroy should be **president**, and should as a rule preside, but that in his absence one of the Princes should be chairman. The rules of business would be framed by the Viceroy after consultation with the Princes, who might from time to time suggest modifications in the rules."

It was further suggested in the joint report that the Council of Princes should be invited annually to appoint a small **standing committee**, to which the Viceroy or the Political Department might refer decisions affecting the Native States, particularly questions dealing with custom or usage. The Joint Report also made recommendations for the appointment of commissions to inquire into disputes in which Native States might be concerned and into cases of misconduct, and for arranging for joint deliberation on matters of common interest between the Council of State and the Council of Princes.

At the end of January 1919 a Conference of the Ruling Princes was held at Delhi, to consider this scheme. The subject which gave rise to the longest discussion was the proposal in the Reform Scheme to divide the Native States into two categories, those possessing "full powers" of internal Government and those not having such powers. Some of the Princes held that membership of the Council of Princes should be limited to the rulers enjoying full powers, whilst others considered that some measure of representation ought to be given to the smaller States; and the Conference came to no agreement on the matter. The proposal to institute a Council of Princes received, however, general support, and it was suggested that the new House should be called the **Narendra Mandal** (House of Princes.)

The recommendations of the Conference were then placed before the Secretary of State, and in the next Conference held in November 1919. Lord Chelmsford propounded a general scheme for a Chamber of Princes approved by His Majesty's Government. The Conference after debating the question passed a resolution warmly accepting the scheme and expressing an earnest hope that the Chamber might be brought into existence during the ensuing year. On the occasion of the **formal inauguration** of the Chamber of Princes Lord Chelmsford, describing how he enlisted the advice and criticism of the Codification Committee of Princes which had been appointed by the Conference and how with their assistance the drafts of the Constitution of the Chamber with the first Regulations and Rules of Business, and the draft resolution concerning Courts of Arbitration and Commissions of Enquiry were moulded into practical shape, explained that difficulties had arisen in the selection of a suitable Indian designation for the Chamber which would for the present be known by the English title of the Chamber of Princes. He also said that another point on which the published constitution differed from the wording favoured by the Committee of Princes was the absolute prohibition of the discussion in the Chamber of the internal affairs of individual States and the actions of individual Rulers. The main function of the Chamber was to discuss matters affecting the States generally or of common concern to the States and to British India or the Empire at large. As regards the question of direct relations between the Government of India and the important States, a recommendation had been made to the Secretary of State for the transfer of the more important States in the Bombay Presidency, according to a scheme prepared by a special Committee, to be carried into effect at some future date, when the conditions appear to be favourable. A scheme would also shortly be placed before His Majesty's Government for the bringing of the important States of the Punjab into direct relations with the Government of India as soon as the necessary arrangements could be made. Gwalior State would soon be brought into direct touch with

the Central Government through a Resident who would be independent of the Central India Agency and some of the Rajputana States, which were formerly in relations with a Local Resident, were now in direct relations with the Agent to the Governor-General in Rajputana.

The Chamber was formally inaugurated by the Duke of Connaught on February 8th, 1921, ana has quickly developed a vigorous life. Its Presidential duties are entrusted to an elected Chancellor, now H. H. the Maharajah of Bikaner and its detailed business is attended to by an elected Standing Committee of six members. This meets twice or thrice a year at the head-quarters of the Government of India and one of its most important functions is to discuss with the various Departments of that Government matters in which the Administrations of both the States and British India are concerned. Important questions of this class which have recently received attention are the division of revenue from Customs and Posts and Telegraphs nad the control of the Police on railway lines running for considerable distances through State territory. The Committee reports to the Chamber, which meets annually. The number of Princes who attended the last meeting was between forty and fifty. Its proceedings have hitherto always been conducted in private.

Indian States' Tribute.

Many of the States pay tribute, varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments, but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India :—

It was announced at the Coronation Durbar of 1911 that there would in future be no Nazarana payments on successions.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula.

The Portuguese possessions in India, all of which are situated within the limits of Bombay Presidency, consist of the Province of Goa on the Arabian Sea Coast; the territory of Daman with the small territory called Pragana-Nagar-Avely on the Gujarat Coast, at the entrance to the Gulf of Cambay; and the little island of Diu, with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula. All these three territories constitute what is called the State of India.

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the *Velhas Conquistas*, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring municipalities of Salsette, Bardez, and Mormugao acquired in 1543; and of the *Novas Conquistas*, or New Conquests, comprising the municipalities of Pernem, Sanquelim, Ponda, Quepem, Canacona, Satari and Sanguem acquired in the latter half of the 18th century. The small island of Angediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east, just off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Sonsagar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine harbour, formed by the promontories of Bardez and Salsette. Half-way between these extremities lies the *cabo*, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines. A breakwater and port have been built there and the trade is considerable being chiefly transit trade from British territory. The international transit of Mormugoa port was in 1926 about Rs. 440 lakhs.

The People.

The total population of Goa was 531,952 at the census of 1921. This gives a density of 408 persons to the square mile and the population showed an increase of 9 per cent. since the census ten years previously. In the Velhas Conquistas the majority of the population is Christian. In the Novas Conquistas Hindus are more numerous than Christians. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Charados and low castes, which do not intermarry. The Hindus who form about one-half of the total population are largely Maratha and do not differ from those of the adjacent, Konkan districts of Bombay. All classes of the people, with the exception of Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. The official language is Portuguese, which is commonly spoken in the capital and the principal towns as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a portion of British India, and the provinces of Macau (China) and Timor (Oceania), with missions in foreign countries and Mocambique (Portuguese East Africa). The Christians of Daman and Diu are subject under a new Treaty signed in 1928 between Portugal and the Holy see to the Archbishop of Goa. There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country.

A little over one-third of the entire territory of Goa is stated to be under cultivation. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas are as a rule better and more intensively cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or six acres. The staple produce of the country is rice, of which there are two good harvests, but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of cocoanut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are

cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years, owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas, and the cultivation of rice fields is now practically controlled by the Hindu population. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardez where the demand for labour is always keen. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory; but has not been seriously worked. Manganese also exists and some mines are being worked at present, the ore being exported to the Continent.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs. 160 lakhs and exports to about Rs. 40 lakhs. The discrepancy is met from the money sent to Goa by the many emigrants who are to be found all over the world. Few manufacturing industries of any moment exist and most manufactured articles in use are imported. Exports chiefly consist of cocoanuts, betel nuts, mangoes and other fruits and raw produce.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Castle Rock above the Ghats where it joins the British system, is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration, and the bulk of the trade of Mormugao port is what it brings down from and takes to the interior. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter, however, had an office at Nova-Goa maintained jointly by the two Governments but since 1925 the Nova-Goa office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Taxes and Tariffs.

The country was in a state of chronic financial equilibrium for nearly sixty years with occasional exceptions. The last war enhanced the deficits to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were the result of the initiative of the Governor-General Jaime de Morais, who is popularly known as the "Governor of Taxes." Only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. There is an estimated surplus of about a lakh and a half which has been ear-marked for promoting the industrial progress of the country. If municipal and national taxes be added together, the country presents a very high incidence of taxation, even higher than that of British India, the average coming to about Rs. 8-8 *per capita.* There is no income-tax, except for government servants, but there is a special ten per cent tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, Excise and the customs. There is a special tax on emigrants which yields to the State about Rs. 60,000 The country being economically backward, the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics.

The tariff schedule is based on the three-fold principle, fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff ranges from 10 to 30 per cent. according to the nature of the commodities, but the duties in several cases are specific, not *ad valorem.* This causes considerable hardship to trade, and specially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonies. Very recently the principle of protection has been extended to the export of canned fruits which are entitled to a bounty of 10 per cent. on their basic price.

The Capital.

Nova-Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar, Old Goa is some six miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao, and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the viceregal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History.

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. Portugal, however, with its three millions of population was too small to defend itself against Spain and maintain at the same time its immence Empire in the four Continents. Albuquerque tried to consolidate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties. His contemporaries, however, could not understand his far-seeing statesmanship and after his death they undid all his work basing their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselytising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and the Inquisition which was a power in the land. The sixty years' subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to stave off its decadence, his subordinates in far-off India either could not understand or would not carry out his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the Novas Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satari, in the Novas Conquistas, revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranes joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appear to be quite satisfied with the Portuguese connection. There is no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This is chiefly due to the fact that under the present regime the natives of Goa enjoy complete equality with the natives of Portugal, many of the sons of Goa occupying high and responsible positions in Portugal. Thus Elvino de Britto who was Minister of Public Works towards the end of the last century was a native of Goa as was the father of Dr. Bettencourt Rodrigues, Minister for Foreign Affairs in General Carmonas dictatorial Government. Natives of Goa are also Dr. Almeida Arez, the President of the Supreme Court in Lisbon, Dr. Caeteno Gonsalves, Judge of the same Court and Mr. Alberto Xavier, Secretary-General of the Ministry of Finance.

Administration.

The Lisbon Government by Decree No. 3266, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (Carta Organica) in force since 1st July 1919. This Charter, regarding civil and financial administration of the colony, was modified by rules Nos. 1005 and 1022, dated 7th and 20th August 1920, and decrees Nos. 7008 and 7030, dated 9th and 16th October. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No. 12,499 of 4th October 1926 and is now in force.

The territory of Portuguese India is ruled by one Governor-General, residing in the Capital of the State, at Panjim *alias* Nova-Goa, and is divided into three districts: Goa, Daman and Diu. The last two are each under a Lieutenant-Governor. The district of Goa is under the direct superintendency of the Governor-General.

Subordinate to the Governor-General the following Secretariats are working: Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works. There are also three special and autonomous Departments, which do not constitute exclusive Secretariats, one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Fiscal of the W. I. P. Railway.

As the principal organ of administration next to the Governor-General and in collaboration with him works a Governor's Council (*Conselho do Governo*) with Legislative and advisory powers. The Council is constituted, in addition to the Governor-General, *ex-officio* President, of four officials (Attorney-General, the Director of Finances, the Director of Civil Administration and the Director of Public Works), five elected members (three representing *Velhas, Conquistas*, one the *Novas Conquistas* and one the Districts of Daman and Diu) and five members nominated by the Governor-General to represent the minorities, agricultural, commercial and other interests and the press.

In each province of Goa, Daman and Diu, there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President, the Government Prosecutor of the Nova-Goa Civil Court; the Deputy Chief Health Officer; the Engineer next to the Director of Public Works; the Deputy Director of Finances; the Chairman of the Municipal Corporation of the Islands; one member elected by the Commercial and Industrial Associations of the district; one member elected by the 60 highest tax payers of Goa; one member elected by the Associations of Land-

owners and Farmers of the District; and one member advocates elected by the Legislative Council among the legally qualified.

At Daman and Diu the corresponding body is composed of the local Governor, President, the Government Prosecutor, the Chief of the Public Works Department, the Health Officer, the Financial Director of the district, the Chairman of the Municipal Corporation, two members elected by 40 highest tax payers of the District and one member elected by the Merchant Industrialists and Farmers of the district.

Under the provisions of the above quoted Decree is also officiating in the capital of Portuguese India a administrative court tribunal to take cognizance and decide all litigious administrative matters, fiscal questions and accounts. It is named *Tribunal Adminisrativo Fiscal e de Contas* and is composed of the Chief Justice as President, four High Court judges, one superior Government officer, who must be a Bachelor of Laws, nominated by the Government and a citizen, who is not an official elected by the Governor-General's Council. When matters regarding finances and accounts come up for decision and discussion the Director of Finances also sits on this Tribunal.

Under the presidency of the Governor-General the following bodies are also working:—

Technical Council of Public Works.—Its members are all engineers on permanent duty in the head office, a military officer of highest rank in the army or navy, the Director of Finances, the Attorney-General, the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works.

Council of Public Instruction.—This Council presided over by the Governor-General is composed of five officials: the Director of Civil Administration, the Director of the Medical College, the Director of the Lyceum, the Director of the Normal School and the Inspector of Primary Schools, and four nominated members.

There is one High Court in the State of Indias with five Judges and one Attorney-General; and Courts of Justice at Panjim, Margao, Mapuçá, Bicholim, Quepêm e Damão; and Municipal Courts of Justice at Mormugão (Vasco da Gama), Pondá Diu and Nagar-Aveli.

PORT OF MORMUGAO.

Mormugão is situated towards the south of Aguada Bar, on the left Bar, on the left bank of Zuary River in Lat. 15° 25'N. and Long. 73° 47' E., about 225 miles south of Bombay and 6½ miles south of Panjim, the Capital of Portuguese India. The Port of Mormugão is the natural outlet to the sea for the whole area served by the M. & S. M. Ry. (metre-gauge), and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormugão is about the same as from Aden to Bombay. The Port is provided with lighthouses, buoys and all necessary marks and it is easily accessible all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory, but when usual pilot flag is hoisted, a qualified officer will board the vessel and render such assistance.

Mormugão Harbour is the terminal station of the West of India Portuguese Railway which is controlled by the Madras and Southern Maharatta Railway Company, with headquarters at Madras. Goods are shipped direct from Mormugão to any Continental Ports every facility being afforded for such direct shipments. Cargo can be unloaded from or loaded direct into Railway wagons, which run alongside steamers, thus reducing handling. Warehouses are built on the quay and have railway sidings alongside. Steamers of over 5,000 tons net register, from any Continental Ports can be discharged or loaded rapidly and in complete safety, in a working day of 10 hours 650 tons iron work or 800 tons bale or bag cargo can easily be loaded or discharged. The port is provided with steam cranes and all other appliances for quick loading and discharging of vessels, one of the cranes being of 30 tons capacity for discharging heavy lifts. The tonnage, quay dues and all other charges are very low, special concessions being granted for steamers arriving from European or American Ports touching Lisbon. Fresh water can be obtained at a low cost.

The Bombay Steam Navigation Company's (Shepherd) steamers between Bombay and Mangalore call at Mormugão twice a week. The British India Steam Navigation Company's steamers between Bombay and Africa call at Mormugão at least once a month. The Ellerman Strick Line maintains a regular service from Liverpool to Mormugão calling occasionally at Lisbon. This service offers every facility for shipment from the United Kingdom to stations on the M. & S. M. Railway under the "Combined Sea and Rail Through Bills of Lading." There are several stevedoring firms, the maximum rate for discharging or loading coal and general cargo being fixed by Government at 6 annas per ton, deadweight. Goods for British India pass through Goa without any charge being collected by Portuguese Government. British Customs duty payable at Castle-Rock can be paid by the Railway Company and collected at destination. Goods from stations on the M. & S. M. Ry. System to Mormugão or *vice-versa* are railed without transhipment, thus avoiding a second handling. Steam tugs, barges, etc., for unloading in the stream can be had at a very low charge.

With a view to promoting the economical, commercial and industrial development of Mormugão, a special Department under the designation of the "Mormugão Improvement Trust" with its head office at Vasco da Gama, 2 miles from Mormugão Harbour, has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area, comprising about 300 acres, near the Harbour. There are over 2,000 plots, each measuring between 1,000 and 2,000 square metres (each square yard—0·8361 square metre), available for residential quarters, granted on permanent lease on each payment of 2 annas to Rs. 1-8 per square metre, according to their situation, in addition to an annual payment of 4 pies per square metre as lease-hold rent

Within about 60 days from the date of application for a plot, the same is made over to the applicant or to the highest bidder, should there be more than one applicant for one and the same plot. The plan of buildings is in all cases subject to the approval of the Chairman of the Improvement Trust, such plan being required to be submitted within 60 days from the date the plot is made over to the lessee, and the period within which building is to be completed is 2 years. Importation of building materials is allowed free of Custom duties. In addition to the above, there is an extensive area available and reserved only for Industrial and Commercial Establishments, this area being known as "Free Zone". Within this "Free Zone," in addition to plots, which are leased at a very low rate for building factories, bonded warehouses or for establishment of any kind of industrial or commercial concerns, in accordance with rules and regulations lately issued by the local Government, special concessions and privileges are granted, such as:

(*I*) *For Establishment of Factories or Industrial Concerns.*—All machinery, building materials, tools, raw materials, etc., required for construction, maintenance and regular working of the Factories are permitted free of import duty, likewise export of the goods manufactured within the "Free Zone."

(*II*) *For Establishment of Depots of Manufactured or Unmanufactured Goods, Bonded Warehouses, etc., etc.*—All goods imported by the Concessionaire for the purpose of such depot are allowed to be exported to any Foreign territory, after being improved and repacked, if necessary, without payment of either import or export duty.

(*III*) *Exemption of Government Taxes.*—In addition to the above privileges, all Factories, Commercial Establishments, buildings, etc., within the "Free Zone" are exempt from all Government taxes for a period of 20 years from May 1923. Applications for any of the above concessions have to be addressed to H.E. the Governor-General of Portuguese India and presented at the office of the Mormugão Improvement Trust at Vasco da Gama, giving therein full particulars of the area and plot, etc., required. Such applications are disposed of within as little time as possible. Full information can be obtained from the Mormugão Improvement Trust, Vasco da Gama.

DAMAN.

The settlement of Daman lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Daman proper, lying on the coast, and the detached pargana of Nagar Aveli, separated from it by a narrow strip of British territory and bisected by the B. B. & C. I. Railway. Daman proper contains an area of 22 square miles and 26 villages and has a population (1921) of 17,566 of whom 1,480 are Christians. The number of houses is according to the same census 4,095. Nagar Aveli has an area of 60 square miles and a population (1921) of 31,048, of whom only 271 are Christians. The number of houses is 6,069. The town of Daman was sacked by the Portuguese in 1531 rebuilt by the natives and retaken by the Portuguese in 1558, when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile, especially in Nagar Aveli, but despite the ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar Aveli, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Daman carried on an extensive Commerce especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogla, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth, from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1921, is 13,844, of whom 228 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or plots. They aggregate 203 square miles, and had a total population in the first January 1927 of 284,432. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first Campagnie d'Orient, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President, Caron, founded in 1668 the Comptoir, or agency, at Surat. But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee; and Caron, passing over to the Coromandel coast, in 1672, seized St. Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the wreck of the settlements at Trincomalee and St. Thome, he took up his abode at Pondicherry, then a small village, which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up; but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until it was restored to the French by the Peace of Ryswick, in 1697. Pondicherry became in this year and has ever since remained, the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an entrepot of trade.

Chandernagore, in Lower Bengal, had been acquired by the French Company in 1688, by grant from the Delhi Emperor; Mahé, on the Malabar Coast, was obtained in 1725-6, under the government of M. Lenoir; Karikal, on the Coromandel Coast, under that of M. Dumas, in 1739. Yanaon, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration-in-chief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur de Guise. He is assisted by a Chief Justice and by several "Chefs de Service" in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Ariancoupam, Modeliarpeth, Oulgaret, Villenour, Tiroubouvane, Bahour and Nettapacam, for the establishment of Pondicherry; Karikal, Neravy, Nedouncadou, Tirunalar, Grande Aldée, Cotchéry, for the establishment of Karikal, and also Chandernagore, Mahé and Yanaon. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry, and those of administrators at Chandernagore. Yanaon, Mahe and Karikal, together with other headquarters charges necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government, with four dependent ones, have to be maintained. This is effected by rigid economy, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India; and of the Missions Etrangeres, the successors of the Mission du Carnatic founded by the Jesuits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running *via* Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea, a striking appearance of French civilisation.

People and Trade.

The Settlements are represented in Parliament at Paris by one senator and one deputy. The Senator is Mons. P. Bluysen. The Deputy is Mons. Coponat. There were in 1926 59 primary schools and 3 colleges all maintained by the Government, with 300 teachers and 10,459 pupils. Local revenue and expenditure (Budget of 1927) Rs. 2,835,350. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 3 cotton mills, and at Chandernagore 1 jute mill; the cotton mills have, in all, 1,635 looms and 72,067 spindles, employing 8,225 persons. There are also at work one oil factory and a few oil presses for groundnuts, one ice factory, one iron works and a cocotine factory.

The chief exports from Pondicherry are oil seeds. At the ports of Pondicherry, Karikal, and Mahé in 1926 the imports amounted to Rs. 10,137,752 and the exports to Rs. 26,285,194. At these three ports in 1926, 336 vessels entered and cleared; tonnage 99,059T. Pondicherry is visited by French steamers, sailing monthly between Colombo and Calcutta in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to December 1926.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in the first January 1927 was 284,432. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693, it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where they border on the sea. The Collector of South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government, who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the Ville blanche and the Ville noire. The Ville blanche has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There is no real harbour at Pondicherry; ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *masula* boats of this coast. Facing the shore end of the pier is a statue of the great Dupleix, to whom the place and the French name owed so much.

CHANDERNAGORE.

Chandernagore is situated on the bank of the Hooghly, a short distance below Chinsura. Population (in the first January 1927) 26,595. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagore has disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Dupleix, formerly called St. Mary's institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1883 it was 93,055; in 1891, 75,526; in 1901, 54,603; in 1923, 57,023; in 1924, 56,922; in 1925, 279,663 and in 1927, 284,432; but the density is still very high, being 1,068 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the six communes—namely, Karikal, La Grande Aldee, Nedungadu, Cotchéry, Néravy and Tirnoular—possesses a mayor and council. The members are all elected by universal suffrage, but in the municipality Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about $1\frac{1}{2}$ miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Paralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

The Frontiers.

By those who take a long view of politics in the wide sense of the term, it will be seen that the Indian Frontier problem, which has loomed so large in the discussion of Indian questions, has always borne a two-fold character—the local issue and the international issue. For almost a century the international issue was the greater of the two, and the most serious question which the Indian Government, both directly and as the executors of British Imperial policy, had to face. But the tendency of recent times has been for the international aspect to recede and for the local aspect to grow in importance, until now it may be said, with as much truth as characterises all generalisations, that the local issue dominates, if it does not absorb the situation.

The Local Problem.—The local problem, in its broadest outlines, may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Nepal is a wild and troublous sea of the highest mountains in the world. The thin valleys in these immense ranges are poorly populated by hardy, brave, militant mountaineers, rendered the fiercer and the more difficult by professing the martial Moslem faith, accentuated by the most bitter fanaticism. But sparse as the population is, it is in excess of the supporting power of the country. Like mountaineers in all parts of the world, these brave and fearless men have sought to eke out their exiguous agriculture by raiding the rich plains of Hindustan. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments, and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised, but if the curious student will read again that brilliant novel by Neil Munro, "The New Road," he will appreciate what Wade's work meant for the Highlands of Scotland, and what lessons it teaches those who are called upon to face, in its local aspect, the Indian frontier problem. So far as the area with which we are dealing was concerned, two policies were tried. In Baluchistan, the genius of Sir Robert Sandeman devised the method of entering into military occupation of the principal points, and thence controlling the country. At the same time close engagements were entered into with the principal chiefs, through whom the tribesmen were kept in order. That policy was so successful that whilst the administration was expensive the Baluchistan frontier did not seriously embarrass the Government of India from the time when Sandeman set his mark on the land. Not that the country was entirely peaceful. Occasional tribal raids or risings necessitated occasional military operations, and the Gomal Pass was involved in the general tribal disturbances which followed the wanton declaration of war by Afghanistan in 1919. But speaking broadly, Sandeman brought peace to Baluchistan, and to the large frontier area which is embraced in that generic term. So far as this section of the frontier is concerned it may be said that no frontier problem exists, save the need for an economical and constructive policy.

Towards Afghanistan.—Far otherwise is it with the section of the frontier which stretches from Baluchistan to the confines of Nepal. That has, for three quarters of a century, been the scene of almost ceaseless military operations, which have constituted a devastating drain on the Indian exchequer. One seeks in vain for a clear and definite policy guiding the actions of the Government of India. One explanation of these inconsistencies is found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited, the soldiers naturally pressed for the armed occupation of the whole country right up to the confines of Afghanistan, or at any rate, for military posts, linked with good communications, which would dominate the country. But those who looked at policy not only from the military standpoint, were conscious of two considerations. They saw that occupation up to the Afghan frontier only meant the shifting of the frontier problem farther North. Instead of the differing tribes, we should have to meet the Afghan on our border line. If Afghanistan were a strong, homogeneous State, that would be a matter of little account. But even under the iron rule of Abdurrahaman Khan, the Amir's writ ran but lightly in the southern confines of his kingdom. Under his successor, Habibullah Khan, whose policy was generally wise and successful, it ran still less firmly. The Amir was unable to control the organisation of the tribal gatherings which involved us in the Zakka Khel and Mohmand expeditions during the Indian secretaryship of that arch pacifist, Lord Morley. Nor did it enable Habibullah to deal effectively with a rising against his own Governor in Khost. The Afghan forces melted away under transport difficulties when they were moved against the rebellious Khostwalis, and the Amir had to make peace with his troublous vassals. Therefore the occupation of the frontier up to what is called the Durand Line, because it is the line demarcated by Sir Mortimer Durand as the British Plenipotentiary, would simply have meant that in time of trouble we should have to deal with Afghanistan instead of a tribe or two, and with the irreconcilable tribesmen along our difficult line of communications. There was the further consideration that financiers were of the sound belief that even if the Forward Policy was wise from the military standpoint, it would involve charges over an indefinite period greater than the Indian finances would bear. Moreover on this section of the Frontier, the position was complicated by the expansion of Russia in Central Asia. The easiest passes, and the passes down which for centuries from the time of Alexander the Great invaders have swept from Persia and Central Asia to loot the fat plains of Hindustan, traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward School, which would have occupied, or dominated, the whole Frontier up to the Durand Line, that is to say up to the Afghan frontier; and the

Close Border School, which would have us remain out of the difficult mountainous zone and meet the tribesmen on the plains if they sallied forth. The extreme advocates of this school would even have had us return to the line of the Indus.

The Two Policies.— The result of this conflict of opinion was a series of wavering compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there, which irritated the Tribesmen, and made them fearful of their prized independence, without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier, and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called The Independent Territory, in which neither we nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it has often been asked why we did not follow the precedent of Baluchistan and "Sandemanise" the Independent Territory. That is one of the perennial topics of Frontier discussions. It is however important to bear in mind that there were essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan, and he was able to enter into direct engagements with the tribal chiefs. There is no such tribal organisation in the Independent Territory. The tribal chiefs, or maliks, exercise a very precarious authority, and the instrument for the collective expression of the tribal will is not the chief, but the jirgah, or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, than the voice of the wiser greybeard. The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North-West Frontier, from the Gomal to the borders of Nepal. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force, owing to the immense difficulties of transportation, was unable effectively to deal with the situation, though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration, and had organised for the purpose a special force of Frontier soldiers, known as the Punjab Irregular Frontier Force. This was the revival of a scheme as old as the viceroyalty of Lord Lytton, though no other Viceroy had been able to carry it through, in the face of the strong opposition of successive Punjab Governments. The area so separated was constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal, afterwards developed into the Swat Canal (*q.v.* Irrigation) led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success.—Judged by every reasonable standard the Curzon policy was successful. It did not give us complete peace. There were occasional punitive expeditions demanded, such as for instance the Zakka Khel and Mohmand expeditions, and the Waziris, and in particular the truculent Mahsud Waziris, never ceased raiding. But in comparison with what had gone before, it gave us relative peace. It endured throughout the War, though the Waziris built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the wanton invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his iron father Abdurrahaman Khan, he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abdurrahaman Khan could hold in the leash of a single State the fractious, fanatical tribes who make up the population of the Afghan kingdom. Yet this Habibullah did. On occasion his attitude seemed to be equivocal, as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Independent Territory, causing the Zakka Khel and Mohmand expeditions. But we must not judge a State like Afghanistan by European standards; the Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the War he warned the Government that he might often have to do things which seemed unfriendly, but they must trust him. In truth, the position of the Amir when Turkey entered on the war, and called Moslems everywhere to arms on the side of Germany was extraordinarily difficult; he received Turkish, German and Austrian missions in Kabul, from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. Indeed, his success was the cause of his assassination. The irreconcilable elements in the Kingdom saw that the day of reckoning had come and strove to avert the settlement of their account by the murder. When he was done to death, his brother, Nasrullah Khan, was proclaimed Amir by the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the arch-fanatic of the ruling House of Kabul, ascending the throne over the blood-stained corpse of his brother. A military movement in Kabul itself

brushed him aside and installed the son of Habibullah, Amanulla Khan, on the throne. But Amanulla Khan soon found it was a thorny bed on which he lay, and encouraged by the disorders in India which followed the passing of stringent measures to deal with anarchical crime, set his troops in motion in April 25,1919, and preaching a *jehad* promised his soldiery the traditional loot of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dacca was seized, Jelalabad and Kabul were frequently bombed from the air, and there was nothing to prevent our occupation of Kabul, save the knowledge gleaned from the bitter heritage of the wars of 1838 and 1878, that it is one thing to overset a government in Afghanistan, but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand, and the Afghans having sued for peace, a treaty was signed on the 8th August 1919.

But an untoward effect of this wanton war was to set the Frontier from the Gomal to the Khyber ablaze. With one or two exceptions, the Tribal Militia could not stand the strain of an appeal from their fellow tribesmen, and either melted away or joined the rising. This has often been described as the failure of the Curzon policy, which was based on the tribal militia. But there is another aspect to this issue, which was set out in a series of brilliant articles which Mr. Arthur Moore, its special correspondent, contributed to *The Times*. He pointed out that the militia was meant to be a military police force. The lapse of time, and forgetfulness of its real purpose, had converted the militia into an imitation of the regular army. The Militia was meant to be a police. When the war broke out its units were treated as a covering force behind which the Regular Army mobilised. This is a role which it was never intended they should serve; exposed to a strain which they should never have been called upon to bear, they crumpled under it. If this reasoning is correct—and a strong case can be marshalled in support of it—then what has been called the failure of the Curzon policy arose from the misconception and misdirection of that policy.

Russia and the Frontier.—On the other hand, if it be admitted that the Curzon policy was sound, and that its success was marked—a proposition with which we are in general agreement—it can also be claimed that the Curzon policy owed no small measure of its success to extraneous events. The greatest external force in moulding Indian frontier policy was the long struggle with Russia. For nearly three quarters of a century a veiled warfare for predominance in Asia was waged between Great Britain and Russia. There are few pages in British foreign policy less attractive to the student of Imperial affairs. Russia was confronted in Central Asia with precisely the same conditions as those which faced England in India when the course of events converted the old East India Company from a trading corporation into a governing body. The decaying khanates of Central Asia were impossible neighbours. Confronted with an inferior civilisation, and with neighbours who would not let her alone, Russia had to advance. True, the adventurous spirits in her armies, and some of the great administrators in the Tsarist capital were not adverse to paying off on the Indian Borderland the score against Great Britain for the Crimean War, and for what the Russians thought was depriving them of the fruits of their costly victory over Turkey in 1877-78. The result was a long and unsatisfactory guerilla enterprise between the hardest spirits on both sides, accompanied by periodic panics in the British Press each time the Russians moved forward, which induced the coining, after the Russian occupation of Merv, of the generic term "Mervousness." This external force involved ?the Government of India in the humiliations of the Afghan War of 1838, with the tragic destruction of the retiring Indian force between Kabul and Jelalabad, slightly relieved by the heroic defence of Jelalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Bala Hissar fortress. It involved us in the second Afghan War of 1878, which left the baffling problem of no stable government in Afghanistan. There was a gleam of light when Abdurrahaman Khan, whom we set up at Kabul to relieve us of our perplexities, proved himself a strong and capable ruler, if one ruthless in his methods. But in the early eighties the two States were on the verge of war over a squabble for the possession of Penjdeh, and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation, without however finally settling it. The old controversy broke out in another form when intrigues with a Buriat monk, Dorjieff, during Lord Curzon's viceroyalty, gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the miasma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The actual authors of the Agreement were Lord Grey, the Foreign Secretary, and Lord Hardinge, formerly British Ambassador in Petrograd, but it had been desired by their predecessors, whose efforts were rendered nugatory by the intransigent attitude of the dominant forces in Petrograd. It was not until Russia was chastened on the battlefields of Manchuria by Japan, and disappeared as a sea power in the decisive battle of Tsushima, that an atmosphere was created favourable to the conclusion of an Agreement. This embraced the whole frontier zone. There were many unsatisfactory features in the Agreement, especially in regard to Persia, for which we had to pay a considerable price in the attitude of Persians in the War. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War. Henceforward Russia ceased to be a material factor in the Indian Frontier Problem, with the exception of a brief period when the Red Army was trotted out as another bogey.

German Influence.—But as nature abhors a vacuum, so in the case of States bordered by higher civilisations, no sooner does one strong

influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. Imitative, not creative, in this, as in most other activities, the Germans adapted their methods from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kaiser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul-Hamed, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians, or rather one of the massacres of Armenians, made German influence supreme at Constantinople. His theatrical tour through Palestine, which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by German interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian lines from the port of Haidar Pasha, opposite Constantinople, to a port in the Persian Gulf. Now successive British Statesmen of both parties had declared that the acquisition of a territorial foot-hold in the Persian Gulf by any power—Russia and the port of Bunder Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarums and excursions which had disfigured our relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed, and when the Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Bourgulu, and constructed a line northwards from Baghdad to Samara. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf, and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty, with a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubian Island. They commenced the most difficult part of the work in piercing the Amanus and Taurus ranges by a series of tunnels, and laid the rails on the other side of the mountains across the Euphrates to Ras-al-Ain. Behind this railway activity stood a grandiose policy, which is indicated in what became known in Germany as "B.B.B."—Berlin, Byzantium, Baghdad. Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf, at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British, and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war, and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

The Significance of the Baghdad Railway.—The real significance of the Baghdad Railway was little appreciated in Great Britain. It was constantly pictured as a great trunk line, which would short-circuit the traditional British dominance by sea, and absorb the passenger and goods traffic from the East. This idea could only be nourished by those completely ignorant of the conditions of the Indian passenger service and the essentials of a competitive route for the carriage of merchandise. The rush of passenger traffic from India is from April to June, in order to escape the hot weather in India, and the return traffic is chiefly concentrated in October and November. From April to June the heat in Mesopotamia is appalling. To imagine that the passenger traffic from India would turn from the easy and comfortable, as well as fairly expeditious sea route from Bombay to Marseilles and thence by the easiest railway travelling outside the British Isles to Calais and London, for such a land route was an amazing chimera. The Baghdad route would have involved a sea voyage from Bombay or Karachi to Koweit or Basra, then a journey across the burning plains of Mesopotamia and Asia Minor to Haidar Pasha, then across the Straits to Constantinople, and finally right across Europe to a North Sea port. This would in any circumstances have been a costly freak journey in comparison with the sea route. Then as for the commercial aspect of the line, the natural port of the Middle East is Basra. The sea freight from England or Germany to Basra, is about one pound sterling a ton; before the war it was often down to fifteen shillings. The freight from Basra to Baghdad was from thirty shillings to two pounds a ton. To imagine again that merchandise would desert this route for a land and sea route, which would have involved a double break of bulk at Constantinople and Haidar Pasha, is again a chimera; the freight charges could not have been less than fifteen to twenty pounds a ton.

As a through route the primary purpose of the Baghdad Railway was strategic. It was designed to make the Power seated at Constantinople—and that Power the Teutons were resolved should be Germany—complete master of Asia Minor and The Middle East, and the route selected, often criticised, was the best for the rapid movement of troops to the strategic centres. As a commercial line, the Railway, if completed, would have served three zones. The western area of Turkey in Asia at Haidar Pasha. The rich lands of Anatolia at Alexandretta. The eastern zone at Basra. The Germans, it is understood, attached immense importance to the subsequent engagements with Turkey which placed them in maritime command at Alexandretta. They began to inaugurate a commercial position in the Persian Gulf through the establishment of a subsidized line of steamers run by the great Hamburg-America corporation

They strove to obtain an actual footing in the Gulf through the German house of Wonkhaus. We doubt if the Germans were ever serious in their alleged designs on Koweit, which could never have borne a more definite relation to the commerce of the Gulf than Flushing to Antwerp or Cuxhaven to Hamburg; that was one of the red herrings they drew across their trail to divert attention from their real objective, Basra, which is destined by virtue of an unchallengeable geographical and natural position to be the great port of The Middle East. These considerations have no more than an academic value now. Germany has been defeated. The Turks, now they are emerging from an isolated military despotism based on Angora, are confronted with the immense problem of re-building their bankrupt State, deprived of the most intelligent section of the old population—the Greeks and the Armenians, by massacre and expulsion—are a very uncertain factor. The completion of the through line is indefinitely postponed. But as the advantages of the route, for the purposes we have indicated, are many and great, the ultimate construction of the through line is only a matter of time, so we have placed these authoritative characteristics on record for the guidance of opinion when the project of the through route is revived, as it must be.

Turkey and the Frontier.—The position of Turkey on the Indian frontier was never of any considerable importance in itself, and never assumed any significance, save as the *avant courier* of Germany, when she passed under the tutelage of that Power, and for a limited period during the war. Although so long established in Mesopotamia, Turkey was not very firmly seated in that country; the Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone, and the administration it is understood never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia, and after the Revolution that fine soldier Nazim Pasha became a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was no-one's interest, even that of the Arab, to turn her out. When however Germany developed her "B.B.B." policy, Turkey was used as a stalking horse. She moved a small force to the Peninsula of Al-Katr in order to frighten the Sheikh of Bahrein, and tried to convert the nominal suzerainty exercised, or rather claimed, over the Sheikh of Koweit into a *de facto* suzerainty, exercised by military force. These efforts faded before the vigorous action of the British Government which concluded a binding arrangement with the Sheikh of Koweit, and the position of the Turks at Al Katr was always very precarious. On the outbreak of the war however the situation changed. When the sound and carefully executed expedition to Basra and its strategic hinterland was developed into the insane enterprise to capture Baghdad by *coup de main*, with very inadequate forces, and still more inadequate transport, we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. After the Russian *debâcle* we found ourselves involved in a new front, which stretched from the Euphrates to the wildest part of Central Asia, producing military exploits of an almost epic character, but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power in Palestine, where Lord Allenby scattered the Turks like chaff. But the aftermath of the war left us in an indefinite position in Mesopotamia, with indefinite frontiers. This enabled the Turks, if they were so disposed, to be troublesome through guerilla warfare in the Mosul Zone, and by stirring up the Kurds, who are the Ishmaelites of Asia Minor. The conclusion of the Treaty of Lausanne in 1923 brought temporary relief, but it did not settle the main issue, the frontier between Turkey and Irak. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to The League of Nations. Negotiations were promptly opened at Constantinople, but it was immediately found that there could be no mutual agreement; the Turks demanded the whole of the Mosul vilayet, and the British delegates declared that Mosul and its hinterland were necessary to the existence of Irak. The issue therefore went to the League of Nations. That body despatched a neutral commission to study the position on the spot; this commission reported that the best settlement would be for the Mosul vilayet to be incorporated in Irak, if the British Government were prepared to prolong its mandate over that State for a period of twenty-five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee, and the Council of The League unanimously allotted the Mosul vilayat to Irak. The Turkish delegates, who at first recognised the decisive authority of The League, then declared that they would not be bound by its decisions. So the matter rested at the end of the year, with Irak in occupation of the disputed up to the temporary frontier, which is known as The Brussels Line. After at first breathing nothing but armed resistance to acceptance of the award, the Turks afterward assumed a more conciliatory note, and alarmed, it may be, by the threat of Italian aggression accepted the frontier line demarcated by the League.

France and the Frontier.—If we touch for a few sentences on the position of France on the frontiers of India, it is not because they have any present day significance, but in order to complete this brief survey of the waxing and waning of external influences on Indian frontier policy. It is difficult to find any sound policy behind the efforts of France to obtain a coaling station at Maskat, in the Persian Gulf, and her long opposition to the steps necessary to extirpate the slave trade, and hold in check the immense traffic in arms which was equipping all the tribesmen on our North-West Frontier with rifles of precision and a large supply of ammunition. We can find no more definite purpose in it than a general pin-pricking policy, a desire to play the part of Russia, and perhaps a source of annoyance to Great Britain, which would form a useful lever for the exaction of considerable cessions in West Africa, particularly in the neighbourhood of Gambia, as the price of abstention. These embarrassments were slowly removed one by one after the conclusion

of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the veiled British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw, in Upper Burma, became an impossible neighbour, and ambitious Frenchmen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction, they were dissipated by the Second Burmese War and the firm establishment of British rule. Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma, then a regular Province of the Indian Empire, and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Penjdeh, and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam. That agreement has been consolidated by wise and progressive rule in Siam itself, under its own independent sovereign, who is imbued with a strong friendship for Great Britain, whilst at the same time maintaining good relations with French neighbours.

The New Frontier Problem.—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838—the Indian frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route, and to a much lesser extent by the ambitions of France and Turkey. All these external influences have disappeared. There is no such prospect of their revival as justified us in taking them into consideration in the measures which are forced on the Governments responsible. The Indian frontier question has therefore developed from an Imperial into a local question—a condition on which we must lay fast hold, because people are tenacious of old ideas, especially when they are nearly a century old, and no proper understanding of the present position is possible, unless our consideration of it is governed by this essential fact, that the frontier question is purely local. But whilst these world changes were taking place, others were in progress which powerfully influence the difficulties of the situation. The tribesman was always an opponent to be respected. Brave, hardy, fanatical, he has always been a first-class fighting man. Knowing every inch of the inhospitable country in which punitive operations must of necessity take place he has hung on our rearguards and given them an infinite of trouble. Even when armed with a jezail and when every cartridge had to be husbanded with jealous care, the tribesman was a respectable antagonist. Now the tribesmen are everywhere armed with magazine rifles, either imported through the Persian Gulf when gun-running was a thriving occupation, stolen from British magazines, or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian Army, either as Regulars in the Pathan regiments, or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1919. The Afghan regular army was of little account. The tribesmen who rose at the call of the jihad, especially in Waziristan, were of great account. They gave our troops the hardest fighting they have ever had on the Frontier; their marksmanship and fire discipline were described by experienced soldiers as admirable. The tribal militia, the keystone of the Curzon system, had for all practical purposes disappeared; what was to take its place?

Immediately following the Afghan War, the frontier positions were garrisoned by regular troops, but this was only a temporary measure. It may be said that the crux of the situation was in **Waziristan**. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people. Besides, possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace, and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan now formally recognised in the Treaty of 1921 as a completely independent state, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated, and no good case can be made out for withdrawing from it. On the other hand, there was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziris are absolutely intractable; that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions; and that the only solution of the question was the occupation of dominant points in Waziristan, as far north as Laddha, and linking these posts with our military bases, and particular with the termini of the Indian frontier railways, by good motor roads.

This controversy has not ended yet; indeed one feels inclined to say that it never will end. It has resulted in a typically British compromise The present policy has beenaptly described as the "half-forward" policy. There has been no withdrawal in the ordinary sense of the term, but the limit of the Waziristan occupation have been fixed at Ramzak, not at Laddha. The network of consequential roads is being pushed forward.

The Indian rail-head, which for so long terminated at Jamrud, at the southern entrance to the Khyber Pass, has now been extended to Landi Kotal and the frontier between India and Afghanistan. The regular troops have been withdrawn, and their place taken by khassadars. The difference between the khassadars and the old tribal militia is material. The Militia were armed and equipped by the Indian military authorities; if they disappeared they took their arms and ammunition with them, and constituted a powerful reinforcement. The khassadars bring their own rifles with them, and therefore if they desert they do not constitute any reinforcement to those in arms against us. Many of these khassadars have already done good work in the punishment of tribal raids.

I.—THE PERSIAN GULF.

From what has gone before it will be seen that the keynote of this discussion of Indian frontier policy is that the external menace has disappeared, and that it is now a purely local question. No part of the frontier is more powerfully influenced by this consideration than the Persian Gulf. Our first appearance in the Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, the supersession of the land by the sea route, and the appearance of anarchy in the interior the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace. This work it quietly and efficiently performed. Piracy was stamped out, the Trucial Chiefs, who occupy the Pirate Coast, were gradually brought into close relations with the Government, the vessels of the Royal Navy kept watch and ward, and our consuls regulated the external affairs of the Arab rulers on the Arab coast. In return for these services Great Britain claimed no selfish advantages. The waters of the Gulf were kept free to the navigation of the ships of all nations, and though Great Britain could have made any territorial acquisitions she pleased she retained possession of only the tiny station of Bassidu. Left to herself Great Britain desired no other policy, but for a quarter of a century the Gulf was involved in European affairs. France sought to acquire a coaling station at Jissa, near Maskat, and obstructed the efforts of the British Government to stamp out the slave trade and to check the immense traffic in arms which was equipping the tribes on our land frontier with weapons of precision and quantities of ammunition. All causes of difference were gradually removed by agreements following the Anglo-French Entente. Russia sent one of her finest cruisers to "show the flag" in the Gulf, and established consular posts where there were no interests of preserve. She was credited with the intention of occupying a warm water port, and in particular with casting covetous eyes on the most dreadful spot in the Gulf, Bunder Abbas. This menace declined after the signing of the Anglo-Russian Agreement and disappeared with the collapse of Russian power following the Revolution. Then Turkey, either acting for herself, or as the *avant courier* of Germany, under whose domination she had passed, began to stir. She threatened the Sheikh of Bahrein by the armed occupation of the peninsula of Al Katr, and moved troops to enforce her suzerainty over Koweit, the best port in the Persian Gulf and a possible terminus of the Baghdad Railway. Further to consolidate her interests, or to stake out a claim, Germany sent the heavily-subsidized ships of the Hamburg-America line to the Gulf, where they comported themselves as the instruments of Imperial policy rather than as inoffensive merchantmen. She also strove, through the agency of the firm of Wonkhaus, to acquire a territorial footing on the island of Shargah. These events stirred the British Government to an unusual activity in are waters of the Gulf.

Counter Measures.

The first effective steps to counter these influences were taken during the vigorous viceroyalty of Lord Curzon, who visited the Gulf during his early travels and incorporated a masterly survey of its features in his monumental work on Persia. He appointed the ablest men he could find to the head of affairs, established several new consulates, and was instrumental in improving the sea communications with the Gulf ports. The British Government also took alarm. They were fortified in their stand against foreign intrigue by the opinion of a writer of unchallenged authority. The American Naval writer, the late Admiral Mahan, placed on record his view that "Concession in the Persian Gulf, whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control will imperil Great Britain's naval position in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia." The Imperial standpoint, endorsed by both Parties in the State, was set out by Lord Lansdowne in

words of great import—"We (*i.e.*, His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, which we should certainly resist with all the means at our disposal." The negative measures following these declarations were followed by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery, were developed by the Anglo-Persian Oil Company, in which the British Government has a large financial stake. But with the disappearance of these external forces on Gulf policy, as set out in the introduction to this section, the politics of the Persian Gulf receded in importance, until they are now more than they were before these external influences developed—a local question, mainly a question of police. They are therefore set out more briefly and those who desire a complete narrative are referred to the Indian Year Book for 1923, pp. 178-183.

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar, and the Islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill-name of this territory has now ceased to have any meaning, but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debai. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debai. The Trucial Chiefs are—Debai, Abu Thabee, Shargah Ajman, Um-al-Gawain and Ras-el-Kheyma.

Bahrein.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrein. Of this group of islands only those of Bahrein and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be handed on the donkeys for which Bahrein is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds, makes the Sheikh the richest ruler in the Gulf.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archæologists. The generally accepted theory is that it is a relic of the Phœnicians, who are known to have traded in these waters.

Political Agent: Lt. Col. C. C. J. Barrett, C.S.I., C.I.E.

Koweit.

In the north-west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is a possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their boldness and hardihood.

Political Agent: Lt. Col. J. C. More, D.S.O.

Muhammerah.

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of Sheikh Khazzal of Muhammerah. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs. Lynch

Brothers. This route provides the shortest passage to Ispahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammerah for the oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, if the scheme for a railway to Khorremabad by way of Dizful matures. A concession for a road by this route has long been held by a British Company.

Vice-Consul at Ahwaz: Captain R. P. Watts.

Basra.

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the present sea terminus of the Baghdad Railway. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates Rivers. The local traffic is valuable, for the richness of the date groves on either side of the Shat-tel-Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route *via* Kermanshah and Hamadan.

The political destinies of Basra are at present wrapped up with the destinies of the new Arab State which we have set up in Mesopotamia under King Feisal. When the war was over we found ourselves committed to immense, undefined and burdensome responsibilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad; then the great military enterprises necessitated by the fall of Kut-al-Amara carried our frontier north to Mosul and the mountains of Kurdistan, east to the Persian boundary, and west to the confines of Trans-Jordania. Amongst ardent Imperialists, there was undoubtedly the hope that this immense area would be in one way or another an integral part of the British Empire. The cold fit followed when the cost was measured, and the Arabs rose in a revolt which showed that any such domination could only be maintained by force of arms and that the cost would be prodigious. Under these circumstances King Feisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power unless King Feisal was to be a mere puppet, immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards that end, but a definite step was taken in 1923. The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually, for the purpose of reference. Addressing the House of Lords on May 3rd he said—

Your Lordships will remember that the Cabinet have been discussing this matter for some time, and decisions have now been taken. Sir Percy Cox has accordingly been authorised by His Majesty's Government to make an announcement at Baghdad, the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Feisal and his Government, and has their cordial assent. It is being published at Baghdad to-day.

The announcement is as follows :—

"It will be remembered that in the autumn of last year, after a lengthy exchange of views, it was decided between the Governments of His Britannic Majesty and His Majesty King Feisal that a Treaty of Alliance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty, which was signed on the 10th October, 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq, enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereunder.

"Since then the Iraq Government has made great strides along the path of independent, and stable existence and has been able successfully to assume administrative responsibility, and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible, it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed, it has been decided to bring about the necessary modifications by means of a protocol which, like the Treaty itself, will be subject to ratification by the Constituent Assembly.

"Accordingly a protocol has now been signed by the parties in the following terms :—

"It is understood between the High Contracting Parties that, notwithstanding the provisions of Article 18, the present Treaty is all terminate upon Iraq becoming a member of the League of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties; and negotiations for that object shall be entered into between them before the expiration of the above period."

It will be noticed that under this protocol the Treaty in its present form is to terminate on the entry of Iraq into the League of Nations or in four years, whichever may be earlier.

The position of Iraq as regards the League is that when the Treaty has been ratified His Britannic Majesty will be bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government will be in a position to take this step on the fulfilment of the two following essential conditions, namely, the delimitation of the frontiers of Iraq, and the establishment on a stable government in accordance with the Organic Law

Under the Treaty of Lausanne between Turkey and the Powers, which was signed in 1923, it was agreed that the frontier between King Feisal's State and Turkey, the important frontier because the future of Mosul was in dispute, should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. These direct negotiations were opened at Constantinople, but no agreement was reached, so the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne, and certain irregular hostilities were carried on in the disputed zone. This matter too was remitted to the League, and a further provisional boundary was drawn, which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report, but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Irak. If therefore the British Government was willing to extend its mandate over Irak for a further period of twenty-five years—a guarantee of stable government—then Mosul should be incorporated in Irak; if Britain was not willing, then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the competence of the Council. About this time there was published the report of a distinguished Esthonian General, General Laindoner, who had been despatched by the League to investigate allegations of brutality by the Turks in deporting Christians from their own zone, and this report was of the most damning character. Great Britain having given the necessary assurance, that she was prepared to extend her mandate over Irak for a further twenty-five years, thereupon the Council of the League allocated the whole of the area in dispute, right up to the temporary frontier—commonly called The Brussels Line—to Irak. The Turks refused to accept the award and withdrew from Geneva threatening force. Later wiser counsels and in 1926 Turkey accepted a frontier substantially as drawn by the League. A formal treaty was concluded between Great Britain and Irak extending the mandate for a further twenty-five years. The British Government express the hope that a shorter period will be sufficient to set Irak on its feet as an independent and stable State; but these hopes are not shared by any who knows the country. They are convinced that at least two generations must pass before Irak can stand alone.

A New Treaty.—A new Treaty regulating the relation of Iraq with Great Britain, the Mandatory Power, was negotiated in 1927, and signed towards the end of the year. The full text is not available, but a semi-official announcement on December 20th may be regarded as substantially authentic.

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that "Provided the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932." It stipulates that separate agreements superseding those of March 25, 1924, shall regulate the financial and military relations.

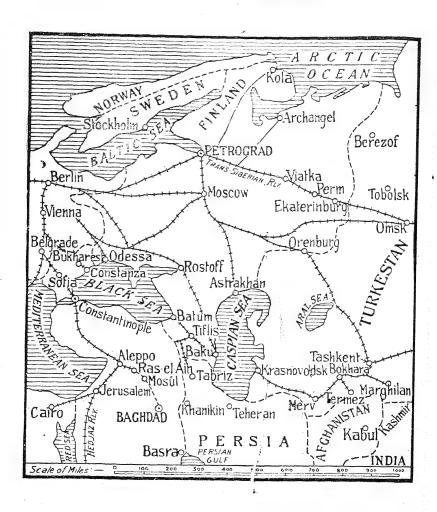
The King of Iraq undertakes to secure the execution of all international obligations which His Britannic Majesty has undertaken to see carried out in respect of Iraq. He also undertakes not to modify the existing provisions of Iraq's organic law so as adversely to affect the rights and interests of foreigners, and to constitute any difference in the rights before the law among Iraquis on the grounds of differences of race, religion, or language.

There shall be full and frank consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertakes, so soon as local conditions permit, to accede to all general international agreements already existing, or which may be concluded hereafter, with the approval of the League of Nations, in respect of the slave trade, the traffic in drugs, arms and munitions, the traffic in women and children, transit navigation, aviation, and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-French Boundary Convention, and the San Remo Oil Agreement in so far as they apply to Iraq.

There shall be no discrimination in matters concerning taxation, commerce, or navigation against nationals or companies of any State which is a member of the League of Nations, or of any State to which the King of Iraq has agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Any difference that may arise between the high contracting parties shall be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty shall be subjected to revision with the object of making all the modifications required by the circumstances when Iraq enters the League of Nations.

It is important to remember that there is a considerable difference between the vilayet of Basra and the other portions of King Feisal's State. Basra has for long been in the closest commercial contact with India, and is in many respects a commercial appanage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war, and they ask nothing better than to remain in close touch with India and through India with the British Government. If we are correct in the

Railway Position in the Middle East.


supposition that Basra is destined to be the great port of the Middle East, then its future under an Arab State, with no experience of administration in such conditions, is one of the greatest interest, which can hardly be regarded as settled by the policy underlying the declaration which is set out above.

The Persian Shore.

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority; the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Ispahnn. But the anchorage is wretched and dangerous, the road to Shiray passes over the notorious kotals which preclude the idea of rail connection, and if ever a railway to the central tableland is opened, the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debai on the Pirate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, lies another sheltered deep-water anchorage, Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. On the Mekran coast, there is the cable station of Jask, and the possible port of Chahbar.

Vice Consul at Bunder Abbas and Assistant to the Resident—G. A. Richardson, O.B.E.

II.—SEISTAN.

The concentration of public attention on the Persian Gulf was allowed to obscure the frontier importance of Seistan. Yet it was for many years a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations; it is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian intrigue was particularly active in Seistan in the early years of the century. Having Russified Khorassan, her agents moved into Seistan and through the agency of the Belgian Customs officials, "scientific missions" and an irritating plague cordon, sought to establish influence, and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned.

The natural conditions which give to Seistan this strategic importance persist. Meantime British influence is being consolidated through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robat is 465 miles, most of it dead level, and it has now been provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spezand, on the Bolan Railway to Nushki, so as to provide a better starting point for the caravans than Quetta. This line was extended to the Persian Frontier, during the war as a military measure, but the traffic supports only two trains a week.

III.—PERSIA.

From causes which only need to be very briefly set out, the Persian question as affecting Indian frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Persia into two zones of influence, and the Persians bitterly resented this apparent division of their kingdom between the two Powers, though no such end was in view. German agents, working cleverly on this feeling, established an influence which was not suspected, and when the war broke out they were able to raise the tribes in opposition to Great Britain, in the South, and after the fall of Kut-al-Amara, when a Turkish Division penetrated Western Persia, they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared, but at that time there was no authority in Persia besides that of the British Government, which had strong forces in the North-West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government, the main features of which were :—

To respect Persian integrity ;

To supply experts for Persian administration ;

To supply officers and equipment for a Persian force for the maintenance of order ;

To provide a loan for these purposes ;

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position.— We have given the main points in the Anglo-Persian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921, page 138 *et seq.* It has been explained that most Persians construed it into a guarantee of protection against all external enemies. When the British troops in the north-west retired before the Bolsheviks, the Persians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the War was that Great Britain must take an active hand in Persia because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal affairs of Persia were her own concern ; if she preferred chaos to order that was her own look-out, but left alone she would hammer out some form of Government. That position has been justified. The Sirdar Sipah, or commander-in-chief, a rough but energetic soldier, gradually took charge of Persian affairs and established a thinly-veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasr-ed-din. A body of capable Americans under Dr. Millspaugh restored order to the chaotic finances. These two forces operating in unison gave Persia the best government she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position, with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At first he was defeated by the opposition of the Mollahs, but in 1925 prevailed, when the Shah was formally deposed and the Sirdar Sipah chosen monarch in his place. The change was made without disturbance, and Persia entered on a period of peace and consolidation which has removed it from the disturbing forces in the post-war world. Throughout the year considerable progress was made with the reform of the administration, and many projects are afoot for the improvement of communications, which is the greatest need of the land, such as an air service to Teheran and railway construction. The least reassuring episode of the year was the departure of the American financial mission, which had done admirable work in the restoration of the finances. When their contract expired Dr. Millspaugh and his colleagues were offered a renewal of it on terms which they did not regard as satisfactory, especially in regard to the powers they were to exercise. They therefore withdrew from the country, and have been replaced by other foreign advisers.

Sir Percy Lorraine assumed office as British Minister at Teheran in December 1921.

Medical Officer and Vice-Consul—Major R. M. Vharegat.

IV.—THE PRESENT FRONTIER PROBLEM.

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south, to Kashmir in the north; this is generically known as the Independent Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom Afghan, Tartar, Turkoman, Persian, Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chirol truly said "the only bond that ever could unite them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their indenendence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Khassadars or else in the outlet which hill-men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains.

Frontier Policy.

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics. In the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought no permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secretary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab, a province whose head is busied with many other concerns. Lord Curzon created in 1901, the North-West Frontier Province, and placed it in charge of a Chief Commissioner with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next Lord Curzon withdrew the regular troops so far as possible from the advanced posts, and placed these fortalices in charge of tribal levies, officered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian Railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushalgarh to Kohat at the entrance of the Kohat Pass, and to Thal at the mouth of the Kurram Valley. These railways were completed by lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade, and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (*q. v.* Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

A New Policy.

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory particularly in Waziristan, peopled by the most reckless raiders on the whole border-line with a bolt hole into Afghanistan when pressed from the British side. It endured throughout the war and did not break

down until the Amir of Afghanistan sought refuge from his internal troubles in a jehad against India. In this insane enterprise the Afghans placed less reliance in their regular troops, which have never offered more than a contemptible resistance to the British forces, than in the armed tribesmen. In this they were justified, for the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan Militia broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897, and the most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later, it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahsuds and the Waziris broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west, and by the districts of Bannu and Dehra Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent. armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahsuds fought with great tenacity. Their shooting was amazingly good; their tactics were admirable, for amongst their ranks were many men trained either in the Militia or in the Indian Army; and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own undoing; their losses were the heaviest in the long history of the Borderland and when the Mahsuds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

A New Chapter.—As the result of the Afghan War of 1919, Indian frontier policy was again thrown into the melting pot. There was much vague discussion of the position in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it, but this discussion did not really come to a head until February-March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits, which had been financed out of borrowings. Further heavy taxation was proposed in this Budget, but even then the equilibrium which the financial authorities regarded as of paramount importance was not attained. When the accounts were examined, it was seen that the heaviest charges on the exchequer were those under Military Expenses, and that there was an indefinitely large, and seemingly unending expenditure on Waziristan. This forced the Military, and allied with it the Frontier, expenditure to the front. In actual practice the discussion is really focussed on Waziristan. In essentials it is the aged controversy—shall we deal with this part of the Frontier on what is known as the Sandeman system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs; or shall we revert to what was known as the close border system, as modified by Lord Curzon, of withdrawing our regular troops to strategic positions outside the tribal area, leaving the tribesmen, organised into militia, to keep the passes open, and punishing the tribesmen by expeditions when their raiding propensities become unbearable.

The Curzon Policy.—The Curzon policy, adopted in 1899, to clear up the aftermath of the serious and unsatisfactory Frontier rising in 1897, was a compromise between the "occupation" and the "close border" policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Tochi at Wana and in the Khyber and Kurram were held by militia, recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system, so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the final policy. He wrote in the Memorandum formulating his ideas: "It is of course inevitable that in the passage of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British troops." The Curzon policy, though it was not pursued with the steadfastness he would have followed if he had remained in control, gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based, could not withstand the wave of fanaticism, and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away; the Waziri militia either mutinied, as at Wana, or deserted. The pillar of the Curzon system fell in the military phrase of the hour, it could not stand the test of religious fanaticism or an Afghan War. The very word Militia became anathema.

The Policy.—The new policy adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislatures. He said it had been decided to retain commanding posts in Waziristan; to open up the country by roads; to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan, and to take over the duties of the Militia by regular troops. That immediate policy was soon modified so far as the garrisoning of these frontier positions by Regular troops was concerned. Such duties are immensely unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on the frontier, and as they had disappeared with the Militia, it was necessary to recreate them.

(4438)

The new form of irregular was what have been called Khassadars and Scouts. The Khassadar is an extremely irregular irregular. He has no British officers and no uniform, except a distinguishing kind of *pagri*. In contradistinction to the old Militia, he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the Khassadars, under their own headmen, secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles, nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Waziristan should be retained; it was another to decide what these posts should be. We must therefore consider the special problem of Waziristan.

V.—WAZIRISTAN.

We can now approach the real frontier question of the day, the future of Waziristan. What follows is drawn from an admirable article contributed to the January number of "The Journal of the United Service Institution of India," written by Lt.-Col. G. M. Routh, D.S.O.

Geographically Waziristan is a rough parallelogram averaging 60 miles from East to West and 160 from North to South. The western half consists of the Suleiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the water-shed between the Indus and the Helmund Rivers and corresponds with the Durand Line separating India from Afghanistan. This is the western boundary. On the east is the Indus. North is the watershed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sandeman in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Ladha some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of important villages of Kaniguram and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sandy desert in the Marwat above Pezu.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Pezu and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants.—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir, two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhel, Mahsuds, Dawars and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, as materially aided our dealings with them.

Unlike other parts of India, however, these wild people acknowledge little allegiance to maliks or headmen. No one except perhaps the Mulla Powindah till his death in 1913 could speak of any portion of them as his following.

Policy.—The policy of the British was at first one of non-interference with the tribes. Even now only part of the country is administered. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars, followed by building posts and brick towers to be held by Militia. These posts were at first placed at the points where raiders usually debouched. The Political Officers, at first supported by Regulars, built up from 1904 onwards a force of some 3,000 Militia with British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required; also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1896. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for Government supporters. From 1904 to 1919 they were held by Militia. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A Programme.—Lt.-Col. Routh then outlined a possible policy for Waziristan. We give it textually, because we believe it substantially reflects military opinion in India:—

To the unprejudiced mind it appears more practical to grasp the nettle firmly and dominate the inhabited tracts. Why should not the road now being made to Ladha be continued 36 miles north to the Tochi road at Datta Khel and 29 miles south to Wana? Why should we not occupy the healthier portions of Waziristan rather than the foothills or Cis-Indus zones? The Razmak district round Makin 6,000 feet up is both healthy and fertile. The same applies to the Shawal valley laying behind Pir Gul, the national peak near Ladha rising to a height of 11,556 feet above the sea. The Wana plain, 5,000 feet up, 30 miles by 15, could with railways support an army corps; there is no doubt that a forward railway policy will help to solve the problem. A line has been surveyed from

Tank to Draban and thence up the valley to Fort Sandeman, so connecting with the Zhob and perhaps later to Wana. The Gumal Tangi from Murtaza to Khajuri Kach is the apparently obvious route, but would be prohibitively expensive in construction and require much tunnelling. Beyond Khajuri Kach *via* Tanai and Rogha Kot to Wana, some 23 miles, offers no difficulty. The old policy of the raiders working westwards and our retributive expeditions stretching their very temporary tentacles eastwards seems to suggest better lateral communications. The broad gauge at Kohat might without undue cost be extended to Thal and thence to Idak *via* Spinwam. From here till further extension proved desirable, a motor road through Razmak, Makin and Dwatoi to link up with that now surveyed to Ladha sounds possible to the looker on. Eventually such communications, road, rail, or both, could continue to Wana, Fort Sandeman and Quetta *via* Hindu Bagh, a strategic line offering great defensive possibilities substituting Razmak, which resembles Ootacamund, and healthy uplands for the deadly fever spots now occupied. The very fact of employing the tribesmen on these works with good pay and good engineers tends to pacify the country as well as providing healthy accessible hill stations in place of the proverbially comfortless cantonments which now exist in this part of the Frontier.

The Compromise.—The new policy, which has been called "the half forward policy," was announced in 1923. It was a compromise between the two extreme schools of thought. This involved the completion of various roads fit for mechanical transport within Waziristan and along the Derajat border; the holding of certain posts, Jandola and Razmak, by Regular troops until this road programme was completed; and thereafter the location of Scouts, who are *mutato nomine* militia, at certain points on the roads within Waziristan, assisted by *Khassadars*, or local levies, finding their own arms and led by their own leaders.

Results.—The official view of the working of the new system is strongly optimistic. It is that since May 1st, 1925, Waziristan is in the happy position of having no history. The Mahsuds have discovered that if the new military roads lead into their country, they also lead out of it, and many of them are taking the opportunity of seeing something of the neighbouring districts of Bannu and Dera Ismail Khan. The building of the roads enables many of the Mahsuds to acquire some money honestly, and now it is not an uncommon sight to see a Mahsud Malik, accompanied by as many of his friends as can find a place, driving in an old battered Ford towards Tank or Dera Ismail Khan. A promising sign is that this peaceful intercourse with the outer world is inducing in the Mahsuds a taste for the lighter episodes of social life. Of high promise is the opening of two primary schools at Karamma and Maidan. Along the whole frontier, between April 1925 and the end of February 1926 only 26 raids were made into British districts, as compared with that in the period immediately following 1919, when within three years 1,196 raids into British India were made.

VI.—AFGHANISTAN.

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans-frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open. To this end having pushed her trans-Persian railway to Samarkand. Russia thrust a military line from Merv to the Kushklinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the tran-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chapper Rift, lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Khojak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or the direct route through Seistan.

Further east the Indian railway system was carried to Jamrud later up the Khyber Pass to Landi Kotal. A first class military road sometimes double, sometimes treble, threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Landi Khana. Later, a commencement was made with the Loi Shilman Railway, which, starting from Peshawar, was designed to penetrate the Mullagori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons this line was suddenly stopped and is now thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has largely succeeded. When the late Abdurrahaman was invited to ascend the throne, as the only means of escape from the tangle of 1879, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahaman made himself master in his own kingdom. By means into which it is not well closely to enter; he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year, increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission,—which nearly precipitated war over the Penjdeh episode in 1885,—determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. It was estimated by competent authorities that about the time of Abdurrahaman's death, Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies, and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahaman Khan distrusted British policy up to the day of his death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal, He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

Afghanistan and the War.—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdurrahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but they must trust him; certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a jehad, or holy Islamic war. But he committed no act of hostility; as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified; he had kept Afghanistan out of the war, he had adhered to the winning side; his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir.—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained; but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jelalabad in his stead, but public opinion in Afghanistan revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at

Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and withdrew. The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced; he had to deal with the war party in Afghanistan; he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with; the fanatical element was exasperated by the imprisonment of Nasrullah; and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlatt Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India, of whom the most prominent was Ghulam Hyder Khan, the Afghan postmaster at Peshawar, flooded Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes, on whom the Afghans placed their chief reliance.

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dacca. Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp. 196-197.

Post War Relations.—It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1920 there were prolonged discussions at Mussoorie between Afghan Representatives and British officials under Sir Henry Dobbs. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was signed.

The main points of the Treaty are set out in the Indian Year Book, 1923, pp. 197, 198-199.

Afghanistan after the War.—Since the War the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1923 when a murder gang from within Afghanistan committed raids in British India, murdering English people and kidnapping English women. In course of time this gang was broken up. His Majesty the King of Afghanistan has had troubles within his own borders which have made him glad of British help. The main object of his government has been to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular; especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadrans in the Southern Provinces, and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated, the whole business gave a serious set-back to the reforms initiated by His Majesty; he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Bolshevik Penetration.—Taking a long view, a much more serious development of the policies of Afghanistan was the penetration of the Bolsheviks. These astute propagandists have converted the former Trans-Caspian States of Tsarist Russia into Soviet Republics, where the rule of the Bolsheviks is much more drastic and disruptive than was that of what was called the despotism of the Romanoffs. The object of this policy is gradually to sweep into the Soviet system the outlying provinces of Persia, of China and of Afghanistan. In Persia this policy has been foiled by the vigour of the Sipar Salah, Reza Khan, since declared Shah. In Chinese Turkestan it is pursued with qualified success. In Afghanistan it has made certain progress. The first step of the Bolsheviks was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmanistan so as to absorb all Northern Afghanistan. This has apparently been abandoned for the moment for a more gentle penetration Large subsidies, mostly delivered in kind, have been given to Afghanistan. Telegraph lines are being erected all over the country; roads are being constructed, large quantities of arms and ammunition are being supplied, whilst an air force with Russian pilots and mechanics has been created and is in process of development. In return the Bolsheviks have received important trading facilities. The whole purpose of this policy is ultimately to attack Great Britain in India through an absorbed Afghanistan.

It is very doubtful if the Amir and his advisers were deceived by these practices, and whether they did not pursue the simple plan of taking all they could get without the slightest intention of handing themselves over to the Bolsheviks. But it is easier to let the Bolshevik in than to get him out; friends of the Afghans were asking

themselves whether the Amir was not nourishing vipers in his bosom. Towards the end of 1925 and in the early part of 1926 there was a rude awakening. The Northern Frontier of the country has always been unsettled because of the shifting courses of the Oxus. In December Bolshevik forces captured with violence the Afghan post of Darkabad, killing one soldier; these events aroused great indignation at Kabul and were denounced by the Amir *coram publico*. There is no little evidence to show that though the form of government has changed in Russia the aims of Russian policy are the same. It used to be said that the test of Russian good faith under the Anglo-Russian Agreement would be the attitude of Petrograd towards the extension of the Orenberg-Tashkent railway to Termes. That line has been constructed by the Bolsheviks. The Afghans have had their eyes opened, with what results remains to be seen.

Russo-Afghan Treaty.—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on February 28th, 1921. The principal clauses of this treaty, as disclosed in the Afghan papers, are as follows :—

Clause 1.—In the event of war or hostile action between one of the contracting parties and a third power or powers, the other contracting party will obeserve neutrality in respect of the first contracting party.

Clause 2.—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and miliary agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organized against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties, the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3.—The high contracting parties acknowledge one another's Government as rightful and independent. They agree toabstain from all sorts of armed or unarmed interfereuce in one another's internal affairs. They will decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Government. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence, or otherwise such activities will be checked. Similarly, neither of the contracting parties will allow armed forces, arms ammunition, or other war material, meant to be used against the other contracting party to pass through its dominions.

Clause 6.—This treaty will take effect from the date of its ratification, which should take place within three months of its signature. It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it should cease after that time.

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establishment of diplomatic relations.

A British Minister is established in Kabul as well as the representatives of other European States. The representatives of Afghanistan are established in India and in London, and at some of the European capitals. The various subsidiary agreements under the Treaty have been carried into effect.

Afghanistan in 1928.

Our knowledge of recent events in Afghanistan is so doubtful and is based to so large an extent on frontier rumour, that what follows must be treated with every reserve. Authentic information is almost entirely lacking ; there has been no official statement ; and those who know the North-West Frontier of India, and the proneness of all classes to accept the maddest stories as truth, will severely discount the statements published in the newspapers.

The King's Tour.—In the closing months of 1927 His Majesty King Amanulla, accompanied by the Queen and a staff of officials, commenced a long tour to India and Europe. It is understood that this was one of the cherished ambitions of his father, King Habibullah who was assassinated in 1919. The project had to be suspended during the duration of the War, and save for a visit to India shortly after his assassination, the King did not leave his territories. King Amanulla was warmly welcomed in India and received a great popular greeting in Bombay both from his co-religionists and members of other communities, who forgot the invasion of India, in 1919. He then took ship to Europe, and was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey, and returned to Afghanistan by way of Soviet Russia and Persia. A series of treaties with the government of the countries visited was anounced and the King returned to Kabul in the late summer of 1928, the tour having been unclouded by untoward incident and Afghanistan was peaceful during his long absence.

Reforming Zeal. It is understood that King Amanulla returned full of reforming zeal. He was much impressed by the political and social institutions of the western lands he visited, and in particular by the dramatic forcefulness with which Mustapha Kemal Pasha had driven Turkey along the path of "reform," or perhaps it would be more correct to say westernisation. In this he was encouraged by the . Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West. Edict after edict was issued, changing the whole structure of

Afghan Society. New codes and taxes were imposed: it was proposed that women should emerge from their seclusion and doff the veil; the co-education of boys and girls was prescribed; in September Government officials were forbidden to practise polygamy; in October European dress was ordered for the people of Kabul; at the same time, according to fairly well substantiated authority, the pay of the regular troops fell into arrear.

With every appreciation of the spirit and direction of these changes, friends of His Majesty advised the King to moderate the pace. They reminded him that in 1924 far less drastic changes had brought serious trouble in their train. In May of that year the "Lame Mullah" raised the standard of rebellion amongst the Gilzai and Mangal clansmen of Khost. The ground for the revolt was the new criminal code, which was said to be in opposition to Mahomedan canon law embodied in the Sheriat and the appointment of civilian judges impinged on the privileges of the Mullahs. The rebellion was crushed, but not until after severe fighting; the lesson remained. Possibly also well-wishers suggested that what was possible in Turkey, after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan, where there had been no contact with the western world. Whatever the cause, news came through in the middle of December that there had been a tribal rising especially severe in the neighbourhood of Jelalabad, and that even Kabul was beset. The air has been thick with rumour ever since.

The Fog of Secrecy.—In the narrative of events to this point we are on fairly secure ground. The progress of events thereafter is a matter of sheer conjecture. A stream of rumour poured into Peshawar; a counter stream of denials which did not always tally with facts emitted from the Afghan consulates in India and in Europe. The first definite sign that things were not well occurred on December 17th; all communication with the Afghan wireless station at Kabul ceased and a veil fell between Afghanistan and the outer world. Evidently the authorities in India were not taken by surprise, for on the 18th an attempt was made to establish touch with Kabul by aeroplane, but the machine was shot down. Later attempts were more satisfactory, and the mechanism for a code of signals was dropped on the British Legation. Almost daily reconnaissances were made, and it is evident that the Government of India was kept well-informed of the progress of events. Air Force assistance was invoked from Irak, and large transport machines were brought from Baghdad. With the consent of the Afghan authorities the evacuation of the women and children was commenced on December 23rd, and the process continued without hitch. By the early part of January 1929 one hundred and thirty-two persons were brought to India, and it is reported that the Soviet emissaries were transported to Russian territory through the medium of their own aircraft.

As to the nature of the revolt, its origins and developments, we are still in the dark. It is understood that the first overt movement was made by the Shinwarri tribes, who live in the Jelalabad district and spread into the British zone north of the Khyber Pass. They took virtual possession of Jelalabad and a settlement with them, in which bags of gold are said to have played a prominent part, was declared before the middle of January. In the Kabul zone a notorious frontier budmash Bacha-i-Saqqa is reported to have taken to outlawry and to have defeated the Afghan Regular Troops, whose pay was in arrear and some of whom are said to have gone over to the rebels. Most of the Legations are outside the city walls, and the British Legation, which is specially remote was under fire, through apparently without any direct hostility to Britain. Every day the Afghan Consulates announced the complete defeat of the rebels; every day "news" of further fighting was reported. However, before January was half way through a trickle of caravan traffic began to arrive in Peshawar through the Khyber, announcing that this part of the country at any rate had attained a more peaceful state.

Reforms Withdrawn—Far more significant on its bearing on the situation was a telegram published on January 17th, reporting that the Kabul Newspaper "Amani" published a proclamation from the King withdrawing all the reforms. According to this statement the Afghan girls who were sent to Turkey for education, were recalled. Orders for the adoption of European dress and for the unveiling of women were cancelled. Girls' schools and women's associations were closed. Soldiers might become followers of Pirs without permission. Certificates of identity and conscription were withdrawn. Friday again became the weekly holiday, A Mejlis-i-Agan (Council of Notables) was formed, consisting of 50 Ulman Sirdars, Khans and officials to amend the laws in accordance with the Sheriat and to review the decisions of the newly constituted Mejlis-i-Vukkala (Council of Provincial representatives).

The proclamation was signed by prominent Ulmans, including the Chief, Qazi Mahomed Akbar and Hazmat Rahim of Shor Kazaud.

British Representatives—Lieut-Col. Sir Francis Henry Humphrys, K.B.E.,

VII.—TIBET.

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse,—the spiritual equal

if not superior, of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over Tibet was recognised, and to whose views until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontiers. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjieff, who had established a remarkable ascendancy in the counsels of the Dalai Lama. After a few years' residence at Lhasa Dorjieff went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission, of which the head was officially described in Russia as "the senior Tsanite Khomba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjieff returned to Lhasa to report progress, and in 1901 was at St. Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjieff had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904.

In view of these conditions the Government of India, treating the idea of Chinese suzerainty over Tibet as a constitutional fiction, proposed in 1903, to despatch a mission, with an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility, and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890; to open trade marts at Gyantse, Gartok and Yatung; to pay an indemnity of £500,000 (seventy-five lakhs of rupees); the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes.

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893, remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis

Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a "constitutional action," it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng, Acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meantime the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched to resume his duties at Lhasa. Moving by leisured stages, he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India, made strong protests to China against this action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour, on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province, but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913, in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration; and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India; Mr. Ivan Chen, representing China; and Mr. Long Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initialled in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Pekin was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marshes, hostilities were suspended and an armistice was concluded.

From what has gone before, it will be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question, and was influenced by our relations with Russia and China rather than with our relations with Tibet. Russia having relapsed into a state of considerable confusion, and China having relapsed into a state of absolute confusion these external forces have disappeared, and Tibet no longer looms on the Indian political horizon. The veil has been drawn afresh over Lhasa, and affairs in that country pursue an isolated course, with this considerable difference. The Dalai Lama is now on terms of the greatest cordiality with the Government of India. In 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr. Bell, C. M. G., I. C. S., Political Officer in Sikkim, was deputed for this purpose. In 1922 telephonic communication between Lhasa and India was established.

British Trade Agent, Gyantse and Yatung.—Captain H. G. Rivett-Carnac.

VIII.—THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim and Bhutan. From Chitral to Gilgit, now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is **Kashmir.** The characteristics of this State are considered under Indian States (*q.v.*); it is almost the only important Native State in India with frontier responsibilities; and it worthily discharges them through the agency of its efficient Indian State troops—four regiments of infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then we come to the long narrow strip of **Nepal.** This Gurkha State stands in special relation with the British Government. It is for all practical purposes independent, and the British resident at Khatmandu exercises no influence on the internal administration. The governing machine in Nepal is also peculiar. The Maharaj Dhiraj, who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister, Sir Chandra Shamsher, has visited England, and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent; and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia? Under the firm rule of the present Prime Ministe Nepal has been largely free from internal disturbance, and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of **Bhutan** and **Sikkim**, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China was officially notified that Great Britain would protect the rights and interests of these States. At the request of the Nepalese Government a British railway expert was deputed to visit the country and advise on the best means of improving communications with India. As the result of his report the Nepalese Government have decided to construct a light railway from Bhichhakhori to Raxaul. Great success has attended the efforts of the Nepalese Government to abolish slavery.

Assam and Burma.

We then come to the Assam border tribes—the Daflas, the Miris, the Abors and the Mishmis. Excepting the Abors none of these tribes have recently given trouble. The murder of Mr. Williamson and Dr. Gregorson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N. E. frontier. A force of 2,500 and about 400 military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were delivered up. The cost of the expedition was Rs. 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagasares runs northwards from Manipur. The Nagasares, a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myitkyina and Bhamo districts of Burma. Over the greater part of this area, a labyrinth of hills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilisation is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States, with an area of fifty thousand square miles and a population of 1,300,000. These States are still administered by the Sawbwas or hereditary chiefs, subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Railway to Lashio, opened in 1903, was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside, for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote place in the north-east of Burma a mild system of slavery existed, but in response to the initiative and pressure of British officers they were all freed by April 1926.

Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a "constitutional action," it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng, Acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meantime the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched to resume his duties at Lhasa. Moving by leisured stages, he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The Southern Shan States are being developed by railway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote place in the north-east of Burma a mild system of slavery existed, but in response to the initiative and pressure of British officers they were all freed by April 1926.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in inveigling Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra *via* Nasarieh, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-l-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul. A line also runs westward from Baghdad to Feluja, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad Line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urumia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North-West Frontier does not suggest the early removal of the strategic difficulties. The completion of a broad-gauge line extending the Indian railway system through the Khyber Pass to Landi Khana, at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammerah, at the opening of the Karun Valley, where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in inveigling Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra *via* Nasarieh, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-l-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul. A line also runs westward from Baghdad to Feluja, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad Line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urumia. Foreign Consular Officers in India.

Name.	Appointment.	Station
Afghanistan.		
Sayed Qasim Khan	Consul-General	Delhi.
Muhammad Usman Khan	Consul	Bombay.
Mr. Bashir Ahmad Khan	Do.	Karachi.
Argentine Republic.		
Senor Don Alejandro del Carril (junior)	Consul	Calcutta.
*Mr. J. F. Barton (leave)	Vice-Consul	Do.
*Mr. C. C. Miller (Acting)	Do.	Do.
Austria.		
*Signor E. Stella	Consul	Bombay.
Belgium.		
Monsieur L. Genis	Consul-General	Calcutta.
Monsieur F. E. Moulin (on leave)	Do.	Bombay.
Mr. L. Valensa (Acting, on leave)	Do.	Do.
Mr. A. Als (Acting)	Do.	Do.
*Mr. J. J. Fleckhart	Consul	Karachi.
*Mr. F. E. L. Werke (on leave)	Do.	Madras.
*Mr. C. W. Foster (Acting)	Do.	Do.
*Mr. C. G. Wodehouse	Do.	Rangoon.
Bolivia.		
*Mr. Abani Mohan Tagore	Consul-General	Calcutta.
*Mr. J. Johnston	Consul	Rangoon
Brazil.		
Dr. Manoel Agostinho de Heredia	Consu	Bombay.
Senhor J. P. Dias	Do.	Calcutta
*Mr. H. V. Simmons	Vice-Consul	Do.
*Mr. V. E. Nazareth	Do.	Karachi.
Vacant	Do.	Bombay.
*Mr. C. H. Straker	Do.	Madras.
*Mr. A. E. Donaldson	Do.	Rangoon.
*Mr. C. F. Pyett	Commercial Agent	Do.
Chile.		
Senor Marcos G. Huidobro. G. H.	Consul-General	Calcutta.
Vacant	Consul	Bombay.
Senor Don N. R. Reyes	Do.	Rangoon.
*Mr. J. G. Bendien	Vice-Consul	Bombay.
*Mr. A. R. Leishman	Do.	Chittagong.
China.		
Mr. Ying Wing Chan	Consul	Rangoon.
Costa Rica.		
Vacant	Consul	Calcutta.
Cuba.		
Senor W. F. Pais	Consul	Bombay.
Senor Don Enrique Molina Y. Eurequez	Do.	Calcutta.
Czechoslovak Republic.		
Dr. Otakar Benes	Consul-General	Bombay.
Vacant	Vice-Consul	Do.
Mr. G. S. Mahomed	Consular Agent	Do.

* Honorary.

Name.	Appointment.	Station.
Denmark.		
Vacant	Consul-General	Calcutta.
*Mr. A. L. B. Tucker (Acting)	Consul	Do.
*Mr. E. H. Danchell (on leave)	Do.	Bombay.
*Captain A. G. Robertson (Ag.)	Do.	Do.
*Mr. W. M. Browning	Do.	Madras.
*Mr. C. J. J. Britton	Do.	Rangoon
*Mr. A. Hansen	Do.	Calicut.
Vacant	Do.	Karachi.
*Mr. L. E. C. Everard	Do.	Moulmein.
Ecuador.		
*Mr. E. G. Dixon, O.B.E. (on leave)	Consul	Calcutta.
*Mr. T. E. Cunningham (Ag.)	Do.	Do.
Finland.		
*Mr. C. H. A. R. Hardcastle (on leave)	Consul	Bombay.
*Mr. F. E. Hardcastle (Acting)	Do.	Do.
*Mr. M. Joakim	Do.	Rangoon.
France.		
Monsieur L. E. R. Laronce	Consul-General	Calcutta.
Monsieur P. L. U. Sudreau	Consul	Bombay.
*Monsieur M. Garreau	Commercial Agent	Calcutta.
Mr. E. L. Price	Consular Agent	Karachi.
*Mr. F. E. L. Worke (on leave)	Do	Madras.
*Mr. C. W. Foster (Acting)	Do.	Do.
Vacant	Do.	Chittagong.
Mr. W. T. Milne	Do.	Rangoon.
Vacant	Do.	Akyab.
Vacant	Do.	Tellicherry.
Germany.		
Baron Ruedt Von Collenberg-Bædigheim (on leave)	Consul-General	Calcutta.
Baron L. Von Plesson (Acting Consul-General)	Consul	Do.
Herr Karl Kapp	Do.	Bombay.
*Herr H. A. W. Huchting (on leave)	Do.	Rangoon.
Herr H. Gloystein (Ag.)	Do.	Do.
Dr. Otto Eberl	Vice-Consul	Calcutta.
Greece.		
*Mr. A. G. Georgiadi (Ag.)	Consul-General	Calcutta.
*Mr. J. Humphrey, O.B.E.	Consul	Karachi.
*Mr. F. A. Archdale (Ag.)	Do.	Do.
Guatemala.		
*Mr. H. Birkmyre	Consul	Calcutta.
Hungary.		
*Mr. Eugene Ludwig (on leave)	Consul	Madras.
*Mr. F. E. Hooper (Ag.)	Do.	Do.
Italy.		
Count Antonio Arrivabene	Consul-General	Calcutta.
Cav. Nobile Don Giuseppe Serpi	Do.	Bombay.
Vacant	Consul	Calcutta.
*Cav. E. Benasaglio	Vice-Consul	Do.
Signor Cav. A. Manzato (on leave)	Do.	Bombay.
*Mons. Mario Cremonino	Do.	Do.
Vacant	Consular Agent	Rangoon.
Vacant	Do.	Madras.
*Signor R. Stuparich (on leave)	Do.	Karachi.
*Mr. C. S. Anderson (Ag.)	Do.	Do.
Vacant	Do.	Akyab.

* Honorary.

The Army.

The great sepoy army of India originated in the small establishments of guards, known as peons, enrolled for the protection of the factories of the East India Company; but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1665 the number was only 285 of whom 93 were English and the rest French, Portuguese, and natives.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Dupleix were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Dupleix had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal; and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owning nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the native armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and the natives numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular-army officered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French; Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814, the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

Mahratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten respectively at Kirkee, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab, to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824, the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of native infantry, 5 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars.—In 1839, a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measures retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former eyes. Sikh aggression led to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Aliwal and Sobraon. Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chilianwala, our brave enemies were finally overcome at Gujerat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended over the frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

The Indian Mutiny.—On the eve of the mutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 native troops; in the Madras Army 8,000 British and 49,000 native troops; and in Bombay 9,000 British and 45,000 native troops. The proportion of native to British was therefore too large for safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances; and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge in which the powder was enclosed in a paper cover, which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Berhampur and in an outbreak at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being rivetted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the mob, burned the houses of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive, and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by a few native battalions, who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reorganisation after the Mutiny.—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organized into three armies, *viz*: Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organizations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 the first large reorganization took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, *viz*: Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1916 and 1917 when both had practically the same functions as their predecessors. It was now realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, new principles or war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief.

Present System of Administration

The essential features of the Army, as constructed on its present basis, will be found in "The Army in India and its Evolution," a publication issued with the authority of the Government of India in 1924.

The Secretary of State, as one of His Majesty's ministers, has a special responsibility and authority in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by an officer of the Indian Army of high rank with recent Indian experience. The appointment is at present held by Field Marshal Sir Claud Jacob, G.C.B., K.C.S.I., K.C.M.G., who was formerly General Officer Commanding-in-Chief of the Northern Command and officiated as Commander-in-Chief from April 1925 to August 1925. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army. In order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council exercise in respect of Army administration the same authority and functions as they exercise in respect of other departments of the Government; in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reforms Scheme, Army expenditure and the direction of military policy have been excluded from the control of the Legislature.

The Commander-in-Chief.—The next authority in the chain of administrative arrangements is His Excellency the Commander-in-Chief, who by custom is also the Army Member of the Viceroy's Executive Council. The appointment is held by His Excellency Field Marshal Sir William R. Birdwood, Bart., G.C.B., G.C.M.G., K.C.S.I., C.I.E., D.S.O., LL.D. He is also a member of the Council of State. All the work connected with the administration of the Army, the formulation and execution of the military policy of the Government of India, the responsibility for maintaining every branch of the Army, combatant and non-combatant, in a state of efficiency, and the supreme direction of any military operations based upon India are centred in one authority,—the Commander-in-Chief and Army Member. In addition, he administers the Royal Indian Marine and the Royal Air Force in India. The Commander-in-Chief is assisted in the executive side of his administration by 4 Principal Staff Officers, *viz.*, the Chief of the General Staff, the Adjutant-General, the Quarter-Master-General and the Master-General of Supply.

The Army Department.—The Staff of the Army Department Secretariat consists of a Secretary who, like the Secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, he is also for the purposes of Sub-section 4, Section 26 of the Regimental Debts Act, 1893 (56 Vict-C. 5) and the Regulations made thereunder Secretary to the Government of India in the Military Department, and for purposes of the Royal Indian Marine, Secretary to the Government of India in the Marine Department; Deputy Secretary, an Establishment Officer, a Director of Military Lands and Cantonments, three Assistant Secretaries, (one of whom is also Secretary of the Indian Soldiers' Board) and the Officer-in-charge, Medal Distribution.

The Army Department deals with all army services proper, and also the administration of the Royal Indian Marine and the Royal Air Force in India, in so far as questions requiring the orders of the Government of India are concerned. The Army Department Secretariat has no direct relations with commanders or troops or the staffs of formations subordinate to Army Headquarters: it has continuous and intimate relations with Army Headquarters in all administration matters and is responsible for the administration of Cantonments, the estates of deceased officers and the compilation of the India Army List. The Army administration is represented in the Legislature by the Army Member in the Council of State, and by the Army Secretary in the Legislative Assembly.

The Military Council—Is composed of the Commander-in-Chief as President, and the following members, namely: The Chief of the General Staff, as Vice President, the Adjutant-General, the Quarter-Master-General, the Master-General of Supply, the Secretary to the Government of India in the Army Department and the Financial Adviser, Military Finance, representing the Finance Department of the Government of India. It is mainly an advisory body, constituted for the purpose of assisting the Commander-in-Chief in the performance of his administrative duties. It has no collective responsibility. It meets when convened by the Commander-in-Chief for the consideration of cases of sufficient importance and difficulty to require examination in conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

Military Territorial Areas.

Indian Territory is divided in four commands each under a General Officer Commanding-in-Chief and the Independent District of Burma under a General Officer Commanding. The details of the organisation are given in the table on the next page and it will be seen that Commands comprise 14 districts: 4 Independent Brigades, and 33 Brigades of which four are temporary. The Northern Command, with its headquarters at Murree, coincides roughly with the Punjab and North-West Frontier Province; the Southern Command, with headquarters at Poona, coincides roughly with the Bombay and Madras Presidencies and part of the Central Provinces; the Eastern Command, with headquarters at Naini Tal, coincides roughly with the Bengal Presidency and the United Provinces; the Western Command, whose headquarters are at Quetta, covers Sind, Rajputana and Baluchistan.

The General Officer Commanding-in-Chief of each Command is responsible for the command administration, training and general efficiency of the troops stationed within his area, and also for all internal security arrangements.

Apart from the four Commands, the only formation directly controlled by Army Headquarters is the Burma district which, mainly because of its geographical situation, cannot conveniently be included in any of the four Command areas. The Aden Independent Brigade which was under the administrative control of the Government of India was transferred to the administrative control of His Majesty's Government from the 1st April 1972.

The distribution of the troops allotted to the Commands and districts has been determined by the principle that the striking force must be ready to function in war, commanded and constituted as it is in peace. With this end in view, the Army in India is now regarded as comprising three categories of troops:

(1) Covering Troops,
(2) The Field Army,
(3) Internal Security Troops.

The role of the Covering Force is to deal with minor frontier outbreaks and, in the event of major operations, to form a screen behind which mobilisation can proceed undisturbed. The force normally consists of 12½ infantry brigades with a due proportion of other arms.

The Field Army consists of 4 Divisions and 5 Cavalry Brigades. The Field Army is India's striking force in a major war.

Army Headquarters.

The organization of the Army Headquarters with the Commander-in-Chief as the head, is founded upon four Principal Staff Officers charged with the administration of—

(*a*) The General Staff Branch;
(*b*) The Adjutant-General's Branch;
(*c*) The Quartermaster-General's Branch.
(*d*) The Master-General of Supply's Branch.

The General Staff Branch deals with military policy, with plans of operations for the defence of India, with the organization and distribution of the army for internal security and external use, the administration of the General Staff in India the supervision of the training of the military forces for war, the education of Officers, the supervision of the education of Warrant and Non-commissioned Officers and men of the Army in India, and Inter-Communication Services.

The Adjutant-General's Branch deals with all matters appertaining to the raising, organising and maintenance of the military forces in officers and men, the peace distribution of the army, discipline, pay and pensions, etc. Martial, Military and International Law, Medical and Sanitary matters affecting the Army in India, Personal and ceremonial questions, Prisoners of war. The Judge Advocate-General forms part of the Branch. The Director of Medical Services in India, who was independent before the war, is now included in the Adjustant-General Branch.

The Quartermaster-General's Branch is concerned with the specification, provision, inspection, maintenance and issue of supplies, *i.e.*, foodstuffs, forage, fuel, clothing, armaments, ammunition, equipment, etc., and is responsible for the following Services:—Transportation, Movements, Quartering, Supply and Transport, Equipment and Ordnance Stores, Remounts and Veterinary, Garrison and Regimental Institutes. Purchase of minor supplies not provided in bulk by the authority responsible for production and provision.

The Master-General of Supply's Branch controls the ordnance and clothing factories, the Military farms and conducts all matter relating to contracts in respect of food-stuffs, etc., and supply in bulk of clothing and necessaries, general stores and materials. The Master-General is also responsible for the design,

Reorganisation after the Mutiny.—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organized into three armies, *viz*: Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organizations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 the next large reorganization took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, *viz*: Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1916 and 1917 when both had practically the same functions as. their predecessors. It was now realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, new principles or war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief.

Present System of Administration

The essential features of the Army, as constructed on its present basis, will be found in "The Army in India and its Evolution," a publication issued with the authority of the Government of India in 1924.

The Secretary of State, as one of His Majesty's ministers, has a special responsibility and authority in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by an officer of the Indian Army of high rank with recent Indian experience. The appointment is at present held by Field Marshal Sir Claud Jacob, G.C.B., K.C.S.I., K.C.M.G., who was formerly General Officer Commanding-in-Chief of the Northern Command and officiated as Commander-in-Chief from April 1925 to August 1925. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army. In order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. Plan Showing Chain of Command.
THE COMMANDER-IN-CHIEF.
General Officer Commanding, Burma Ind. District. (2nd class.)
—Commander, Rangoon Brigade Area.
General Officer Commanding-in-Chief, Southern Command.
—General Officer Commanding—Madras District. (2nd class.)
—Commander, Southern Brigade Area.
—General Officer Commanding—Bombay District (2nd class.)
Commanding, Poona (Independent) Brigade Area.
—General Officer Commanding—Poona District (1st class).
—Brigade Commander, 4th (Secunderabad) Cavalry Brigade.
—Brigade Commander, 11th (Ahmednagar) Infantry Brigade.
—Brigade Commander, 12th (Secunderabad) Infantry Brigade.
—General Officer Commanding—Madras District (2nd class.)
—Brigade Commander, 10th (Jubbulpore) Infantry Brigade.
General Officer Commanding-in-Chief, Eastern Command.
—General Officer Commanding—Presidency and Assam District. (2nd class.)
—General Officer Commanding—Lucknow District (2nd class.)
—Brigade Commander, 6th (Lucknow) Infantry Brigade.
—Commander, Allahabad Brigade Area.
—Commander Delhi (Independent,) Brigade Area.
—General Officer Commanding—Meerut District. (1st class.)
—Brigade Commander, 3rd (Meerut) Cavalry Brigade.
—Brigade Commander, 7th (Dehra Dun) Infantry Brigade.
—Brigade Commander, 8th (Bareilly) Infantry Brigade.
—Brigade Commander, 9th (Jhansi) Infantry Brigade
General Officer Commanding-in-Chief, Western Command.
—General Officer Commanding—Baluchistan District. (1st class.)
—Brigade Commander, 4th (Quetta) Infantry Brigade.
—Brigade Commander, 5th (Quetta) Infantry Brigade.
Commander, Zhob (Independent) Brigade Area.
Commander, Sind (Independent) Brigade Area.
General Officer Commanding-in-Chief, Northern Command.
—General Officer Commanding—Waziristan District. (2nd class.)
—Commander, Razmak Brigade.
—Commander, Bannu Brigade.
—Commander, Manzai Brigade.
—General Officer Commanding—Lahore District. (1st class.)
Brigade Commander, 2nd (Sialkot) Cavalry Brigade.
Commander, Ferozepur Brigade Area.
Commander, Multan Brigade. Area.
Commander, Jullunder Brigade Area.
Commander, Lahore Brigade Area.
Commander, Ambala Brigade Area.
—General Officer Commanding—Rawalpindi District (1st class.)
—Brigade Commander 1st (Abbottabad) Infantry Brigade.
—Brigade Commander, 2nd (Rawalpindi) Infantry Brigade.
—Brigade Commander, 3rd (Jhelum) Infantry Brigade.
—General Officer Commanding—Kohat District. (2nd class.)
—Commander, Kohat Brigade.
—General Officer Commanding—Peshawar District. (1st class.)
—Commander, Landikotal Brigade.
—Commander, Peshawar Brigade.
—Commander, Nowshera Brigade.
—Brigade Commander, 1st (Risalpur) Cavalry Brigade.

Plan Showing Chain of Command.
THE COMMANDER-IN-CHIEF.
General Officer Commanding, Burma Ind. District. (2nd class.)
—Commander, Rangoon Brigade Area.
General Officer Commanding-in-Chief, Southern Command.
—General Officer Commanding—Madras District. (2nd class.)
—Commander, Southern Brigade Area.
—General Officer Commanding—Bombay District (2nd class.)
Commanding, Poona (Independent) Brigade Area.
—General Officer Commanding—Poona District (1st class).
—Brigade Commander, 4th (Secunderabad) Cavalry Brigade.

—Brigade Commander, 3rd (Jhelum) Infantry Brigade.
—General Officer Commanding—Kohat District. (2nd class.)
—Commander, Kohat Brigade.
—General Officer Commanding—Peshawar District. (1st class.)
—Commander, Landikotal Brigade.
—Commander, Peshawar Brigade.
—Commander, Nowshera Brigade.
—Brigade Commander, 1st (Risalpur) Cavalry Brigade.

inspection, and supply of guns, carriages, tanks, small arms, machine guns, chemical warfare appliances, etc. He also deals with questions regarding patents, royalties and inventions.

There are other branches of Army Headquarters administered by officers who are not classified as Principal Staff Officers, but are not directly subordinate to any of the four Principal Staff Officers.

These are:

(1) The Military Secretary, usually a Major-General, who deals with the appointment, promotion and retirement of officers holding the King's Commission, the selection of officers for staff appointments, and the appointment of officers to the Army in India Reserve of Officers.

(2) The Engineer-in-Chief, also a Major-General and head of the Corps of Royal Engineers in India. He is responsible for Engineer operations and Engineer Services during War and Peace and preparedness for War of the Engineering services. The supply of Engineer Stores during War and Peace. The construction and maintenance of all military works and the constructional efficiency, accuracy and economy of all projects and designs.

In addition to the above, the Army Headquarters staff includes certain technical advisers, fo whom the most important are the Major General, Cavalry, the Major-General, Royal Artillery, the Colonel, Royal Tank Corps, the Brigadier, Royal Engineers, the Signal Officer-in-Chief, and the Adviser and Secretary Board of Examiners.

Regular British Forces in India.

The British cavalry and British infantry units of the army in India are units of the British service. No individual British service unit is located permanently in India. Units of the British Army are detailed for a tour of foreign service, of which the major part is as a rule spent in India. In the case of British infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. The tour of overseas service of a British battalion is usually 16 years. In the case of British cavalry the same arrangement cannot be applied, as one unit only comprises the regiment. The normal tour of overseas duty for a regiment of British cavalry is 14 years. In Great Britain, in peace-time, units are maintained at an establishment smaller than that required for war. In India, the peace establishments exceed the war establishments in view of the fact that reserves of British personnel do not exist, and reinforcements must be obtained from Great Britain.

British Cavalry.—There are 5 British cavalry regiments in India. The establishment of a British cavalry regiment is 27 officers and 571 other ranks.

British Infantry.—The present number of British infantry battalions in India is 45, each with an establishment of 28 officers and 882 other ranks.

In 1921, an important change was made in the composition of a British infantry battalion in India by the inclusion of a proportion of Indian combatant ranks. Battalions had always maintained a quota of Indian followers, but uy to 1921 the combatant personnel was entirele British. In 1921, on the abolition of the Machine Gun Corps, eight machine guns were included in the equipment of a British infantry battalion. The peace establishment of Indian combatant personnel is fixed at one Indian officer and forty-one Indian other ranks. The Indian platoon, as it is called, is transferred *en bloc* to another British battalion when the battalion to which it was originally attached proceeds on relief out of India.

Royal Artillery.—Indians are employed as drivers and artificers in the Royal Horse Artillery and in field and medium batteries, as drivers, gunners and artificers in pack batteries, and as gunners in heavy batteries.

The peace organisation of the artillery at the present day is as follows:

Royal Horse Artillery.—Comprises four batteries and four ammunition columns. Each battery is armed with six 13-pounder guns.

Field (Higher and Lower Establishment) Brigades.—Seven brigades on the higher establishment, each consisting of headquarters and four batteries. Three brigades on the lower establishment, each consisting of headquarters and four batteries. Of the seven brigades on the higher establishment, four-brigades consist of two batteries, each armed with six 18-pounder guns, and two batteries each with six 4·5″ howitzers. Three brigades consist of three batteries, each armed with six 18-pounder guns, and one battery with six 4·5″ howitzers. Of the three brigades on the lower establishment two consist of three batteries, each armed with six 18-pounder guns, and one battery with six 4·5″ howitzers, and one brigade of two batteries armed with six 18-pounder guns, and two batteries armed with 4·5″ howitzers. Two guns in each battery are immobile.

Field (Reinforcement) Brigade.—The reinforcement brigade consists of two double batteries, each armed with six 18-pounder guns, and two 4·5″ howitzers.

Ammunition Columns.—Two Divisional ammunition columns are maintained for the artillery of the first and second divisions, and one field ammunition column for the covering force brigade on the frontier.

Indian Mountain Brigades.—Six brigades, each consisting of headquarters, one British light and three Indian mountain batteries, also one unbrigaded mountain battery and one mountain Artillery Section for Chitral. The British battery and two Indian batteries per brigade are armed, with four 3.7″ howitzers; the remaining batteries are armed with four 2.75″ guns. The armaments of the Frontier posts at Kohat. Fort Lockhart, Idak, Razani Damdil. Thal, Chaman, Hindubagh; Malakand Landi Kotal; Arawali Shagai; Chakdara and Fort Sandeman are also manned by personnel of Indian Mountain Brigades. R. A.

Medium Brigades.—Two brigades, each consisting of one horsedrawn and three tractor drawn batteries. In one brigade, the horse drawn battery is armed with 60-pounder guns in the other, with 6″ howitzers.

Heavy Brigade.—Headquarters and two batteries at Bombay, and one battery at Karachi.

As a commencement thas been decided to mechanise the 1st Field Brigade and 2nd Divisional Ammunition Column, Royal Artillery, which units will eventually be located at Quetta. Other Royal Artillery units will be mechanised in due course.

Artillery Training Centres.—One centre for Indian ranks of R. H. A. and of field and medium batteries and another centre for Indian ranks of pack batteries. These centres were created for the recruitment and training of Indian personnel.

Engineer Services.

The Engineer-in-Chief.—The head of the Corps of Royal Engineers in India is directly responsible to His Excellency the Commander-in-Chief. The Engineer-in-Chief is not a Staff Officer, but the technical adviser of the Commander-in-Chief on all military engineering matters and is responsible for:

(1) Engineer operations and engineer services during war and peace.

(2) The preparedness for war of the engineering services.

(3) The supply of engineer stores during war and peace.

(4) The execution and maintenance of all military works.

(5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him.

The Organisation.—The Engineer organisation of the Army consists of two main branches, *viz.*, the "Sappers and Miners" and "Pioneers" and the Military Engineer Services.

The composition of the Corps of Sappers and Miners is as follows:

King George's Own Bengal Sappers and Miners, with headquarters at Roorkee. Queen Victoria's Own Madras Sappers and Miners, with headquarters at Bangalore, Royal Bombay Sappers and Miners, with headquarters at Kirkee. Burma Sappers and Miners, with Headquarters at Mandalay.

The personnel of the Corps consists of Royal Engineer officers, Indian officers holding the Viceroy's commission, a certain number of British warrant and non-commissioned officers, Indian non-commissioned officers and Indian other ranks. The first three Corps are commanded by a Lieut.-Colonel, who is assisted by two Majors, as Superintendents of Park and Instruction, an Adjutant, a Quartermaster, two Subadar-Majors, a Jemadar Adjutant and a Jemadar Quartermaster. The staff of the Burma Sappers and Miners is proportionately less.

Field Troops are mounted units, trained to accompany cavalry, and are equipped to carry out hasty bridging, demolition and watersupply work. Field Companies are trained to accompany infantry. Divisional Headquarters' Companies are small units containing highly qualified "tradesmen" and are trained to carry out technical work in connection with field workshops. Army Troops Companies are somewhat smaller units than field companies; they are required to carry out work behind divisions, under the orders of Chief Engineers, *e.g.*, heavy bridging work, large water-supplies, electrical and mechanical installation.

The Military Engineer Services control all military works in India, and Burma except in the case of a few small outlying military stations, which are in charge of Public Works Department. They control all works for the Royal Air Force and for the Royal Indian Marine; and they are charged with all civil works in the North-West Frontier Province and Baluchistan under the orders, in each of these two areas, of the Chief Commissioner and Agent to the Governor-General. They also control civil works in Bangalore, under the Mysore Government.

The Engineer-in-Chief is assisted by a Deputy Engineer-in-Chief (Works) and a Deputy Engineer-in-Chief (Electrical and Mechanical). In each Command there is a Chief Engineer, while in the Northern Command a Deputy Chief Engineer administers Military and Civil works in the N. W. F. P. and is Secretary, P. W. D., to the Chief Commissioner. The Chief Engineer, Western Command, is the Secretary, P. W. D., to the Agent to the Governor-General in Baluchistan. Both at Army Headquarters and in Commands there are Staff Officers, R. E., and Technical Officers. At the headquarters of each district there is a Commanding Royal Engineer, assisted in the 1st and 2nd class districts by A. C. R. Es. Officers of the Barrack Department are also employed as District Stores Officers. Garrison Engineers are in charge of brigade areas and military stations, their charges being divided into subdivisions under Sub-divisional Officers. The sub-divisions are Buildings and Roads, Electrical and Mechanical, and Furniture and Stores. There are sub-overseers for Buildings and Roads and the Barrack Department subordinates in charge of Furniture and Stores are assisted by store-keepers.

Royal Air Force in India.

The Royal Air Force in India is controlled by the Commander-in-Chief in India as part of the defence services of the Indian Empire. The Air Force budget is incorporated in the Military Estimates. The Commander of the Air Force, the Air Officer Commanding in India is an Air Vice-Marshal whose rank corresponds to that of a Major-General in the Army.

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in six branches, namely, air staff, personnel, technical, stores, medical and chief engineer. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking, the duties assigned to the divisions mentioned are those which are performed by the General Staff Branch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's Branch, the Medical Directorate and the Engineer in Chief's branch respectively, of Army Headquarters.

Subordinate formations.—The formations subordinate to the Royal Air Force Headquarters after the re-organisation has been effected are:—

(*i*) Group Command, which will in turn control 2 Wing Stations, comprising two squadrons each, on a station basis.

(*ii*) Wing Command which will in turn control two squadrons not on a station basis.

(*iii*) Station Commands.

(*iv*) The Aircraft Depot.

(*v*) The Aircraft Park.

Group Command.—The Group Command will consist of a Group Headquarters, which will be known as No. 1 (Indian) Group Headquarters, and will be located at Peshawar. The Group Commander will be of the rank of Group Captain, and will correspond in rank to that of a Colonel in the Army. He will be equipped with a staff on approximately the same system as the R.A.F. Headquarters staff of the R.A.F. in India. The establishment of the Group consists of 4 officers and 16 airmen.

The subordinate units to No. 1 (Indian) Group Headquarters will be as follows :—

No. 1 Wing Station, R.A.F., Peshawar.
No. 2 Wing Station, R.A.F., Risalpur.
1Army Co-operation located at Peshawar.
R. A. F. Hill Depot, Lower Topa.

Wing Command.—There will be one Wing Command only namely 3 (Indian) Wing, R.A.F., located at Quetta. The Wing Commander is an officer with Air Force rank corresponding to the rank of a Lieutenant-Colonel in the Army.

He is equipped with a staff organised on approximately the same system as the Headquarter of a Group. The Wing Establishment consists of 4 officers and 17 airmen.

Wing Station Commands.—There will be 2 Wing station commands in India, one located at Peshawar and the other at Risalpur. Each station will consist of two squadrons on a reduced squadron basis with one administrative head, *i.e.*, Station Headquarters under the command of a Wing Commander. The strength of the Station Headquarters will be 8 officers and 116 airmen, while that of the two squadrons total 24 officers and 102 airmen.

The Squadrons.—Of the 8 squadrons 7 will be extended along the North West Frontier from Quetta to Risalpur, and one will be stationed at Ambala.

The squadron is the primary air force unit, and it consists, normally, of a Headquarters and three flights of aeropanes. A flight can be detached temporarily but not permanently from its squadron as repair facilities, workshops and stores cannot economically be organised on anything less than a squadron basis. The squadrons headquarters comprises the officers and other ranks required for the command and administration of the squadron as a whole ; it includes the workshops and repair units, the armouries and equipment stores of the squadrons.

The number of aeroplanes in a squadron varies with the type of aeroplane with which the squadron is equipped ; but speaking generally squadrons on a peace basis have twelve aeroplanes *i.e.*, four in each of three flights. This does not however apply to the twin engined bombing squadrons.

Of the 8 squadrons 2 are equipped with D. H. 9a's and 2 with Wapitis and they are allotted for distant reconnaissance and bombing duties ; the other four, which are allotted for Army Co-operation duties, have Bristol Fighter aeroplanes.

Typical Squadron Establishment.—The establishment of officers in a squadron consists of six officers in the Headquarters, and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

The establishment of other ranks is 117 airmen.

The Aircraft Depot.—The Aircraft Depot may be conveniently described as the wholesale store and provision department of the Royal Air Force. Technical stores are received from the United Kingdom, and in the first instance, held by this unit. It is also the main workshop and repair shop of the Force, where all engine repairs, mechanical transport repairs, and aircraft repairs of any magnitude are carried out. The Depot is located at Karachi.

The Aircraft Park.—Relatively to the Aircraft Depot, the Aircraft Park may be described as a central retail establishment, intermediate between the squadrons and the Aircraft Depot. It receives stores from the depot and distributes them to the squadron. The Stocks held in the Park are, however, usually limited to items necessary at short notice for operations, and the quantities held are kept as low as distance from the depot and local conditions will admit. In war, an Aircraft Park is intended to be amobile formation, though the aircraft Park in India cannot be made mobile under ordinary conditions. In peace, the Aircraft Park is located at Lahore. New aeroplanes received from the United Kingdom are erected there, but no major repairs are undertaken. In addition to the above functions, practically the whole of the motor transport bodies requred for R. A. F. vehicles are built or repaired at Aircraft Park.

Composition of Establishments.—The personnel of the Royal Air Force in India consists of Officers, Warrant Officers, Non-commissioned officers and men in the ranks of the R. A. F. of the United Kingdom, and Indian Artificer, Mechanical Transport Drivers and Followers of the Indian Technical and Followers Corps, R. A. F. in India. The officers are employed on administration, flying and technical duties but all with the exception of officers of the store and medical branches are requred to be capable of flying an aeroplane. A proportion of non-commissioned officers are also trained and employed as pliots for a period of five years, after which period, they revert to their technical trades. Apart from these airmen all Warrant Officers, Non-commissioned officers and aircrafts men are employed solely on technical duties. The only other flying personnel who are not officers or N.C.O. pilots are air gunners and a certain percentage of wireless operators.

The Warrant Officers, non-commissioned officers and aircraftsmen are employed at all units. The personnel of the Indian Technical and Followers Corps are employed as follows :—

(*a*) Technical Section . . Aircraft Park. Aircraft Depot.
(*b*) M. T. Drivers Section . All Units.
(*c*) Followers Section . . All Units.

(*a*) Consists of Artificers of the trades or Carpenter, Fitter, Fabric Worker, Motor Body Builder Acetylene Welder, Turner, Blacksmith and Upholsterer.

(*b*) Drivers of the R.A.F. Mechanical Transport.

(c) Class I and II Followers, i.e., Cooks, Sweepers Bhisties, Beldars and Lascars. The total establishment of the Royal Air Force in India after re-organisation will be as follows:—

Officers	.. ..	258
Airmen	.. ..	1,874
Indians	.. ..	1,253

The Royal Air Force Medical Services.—In India, as in the United Kingdom, the Air Force has a medical service of its own. Flying must still be regarded at present as an abnormal pursuit for the human being. It is carried out under conditions which differ widely from those on the ground. With the growth of aeronautics therefore, it was found necessary to create a separate department of medical science whose functions, broadly stated are to study the effect of flying upon the human constitution both mental and physical, to study also the effects of different forms of illness and physical disability upon flying efficiency and to apply in practical form the results ascertained. The essential object in view is to save life by ensuring, so far as possible that those who fly are physically and psychologically fit to do so. The present establishment of the Royal Air Force Medical Service in India consists of 12 officers and 30 airmen. The Medical Administration is controlled by the Prinicpal Medical Officer of the rank of Group Captain, on the staff of the Air Officer Commanding the R. A. F. in India.

Regular Indian Forces.

Indian Cavalry.—The present number of Indian cavalry regiments is 21.

The peace establishment of an Indian cavalry regiment comprises:

14 British officers.
19 Indian officers.
493 Indian non-commissioned officers and men.

Indian Infantry and Pioneers.—The establishment of the Indian Infantry is constituted as follows:

		Battalions
20	Infantry regiments consisting of ..	104
3	Pioneer regiments consisting of ..	11
1	Independent Pioneer battalion (4th Hazara Pioneers)	1
3	Regiments of Sappers and Miners ..	3
10	Gurkha regiments consisting of ..	20
37		139

The normal strength of an active battalion is—

	British Officers.	Indian Officers.	Indian other ranks
Infantry ..	12	20	742
Pioneers ..	12	16	720
Gurkhas ..	13	23	920

The strength of a training battalion depends upon the number of battalions forming the regiment. The average is as follows:—

Infantry.—British Officers 9, Indian Officers 14, and Indian other ranks 636.

Pioneers.—British Officers 9, Indian Officers 11, and Indian other ranks 469.

The strength of the Independent Pioneer Battalion is British Officers 13, Indian Officers 18, and Indian other ranks 923.

Reserves for these units have to be sufficient to provide for an actual shortage on mobilisation as well as for the maintenance of the mobilised unit at full strength for the first 8 months after mobilisation.

Reserve.—The conditions of the reserve are as follows:—

(a) There are two classes in the reserve Class A and Class B. A reservist is eligible to serve in Class A up to 8 years' combined army and reserve service, and in Class B up to 15 years' combined service.

(b) Service in the reserve is compulsory. On enrolment a man engages to serve at least 5 years in army service, and to serve up to 15 years in combined army and reserve service, if required to do so.

(c) Reservists will be trained for not more than 1 month annually in the cases of Class A, and biennially in the case of Class B. During training the reservist will receive the full pay of a serving soldier.

(d) While not under training, the reservist will receive pay as follows:—

Class A, Rs. 7 per mensem.

Class B, Rs. 4 per mensem.

(e) A reservist will be discharged from the service after 15 years' combined army and reserve service, when he will receive a pension of Rs. 3 per mensem, or, if he desires it, a gratuity of Rs. 300 in lieu. A reservist who is invalided from the reserve is granted a gratuity varying between 3 and 6 months pay and good conduct pay according to service.

The establishment of reservists is fixed at present as follows:—

Cavalry	.. .. ..	2,943
Artillery	.. .. ..	2,520
Sappers & Miners	.. ..	1,710
Indian Signal Corps	.. ..	901
Infantry	.. .. ..	24,320
Gurkhas	.. .. ..	2,000
Pioneers	.. .. ..	1,240
Independent Pioneers	..	81
Total	..	35,715

The Indian Signal Corps.—The Corps is organised on the same lines as a Sapper and Miner Corps, with a headquarters for recruiting and training personnel, and detached field units for the various army formations. The head of the corps is the Signal Officer-in-Chief, who belongs to the Royal Corps of Signals and is attached to the General Staff Branch at

Army Headquarters as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The headquarters, termed the Signal Training Centre, India, are located at Jubbulpore, and are commanded by a Colonel, assisted by a staff, British and Indian, organised on very much the same lines as the headquarters of a Corps of Sappers and Miners.

The various types of field units and the number maintained are:—

Corps Signals Headquarters including Line and Wireless Company	2
Cavalry Brigade Signal Troops ..	4
Divisional Signals	4
Signal Parks	2
District Signals	3
Medium Brigade Royal Artillery Signal Section	1
Field Brigade Royal Artillery Signal Section	1

In addition, there is an Army Signal School which carries out the training of regimental signalling instructors.

The formation of the District signals units was effected in 1926 with the transfer of Communications on the North-West Frontier to the Posts and Telegraphs Department. This transfer of communications also made feasible the raising of the 'A' and 'C' troops of Cavalry Brigade Signals to include a Wireless Section each, the formation of two Corps Signal Headquarters and the formation of one Medium and one Field Brigade Royal Artillery Signals Sections. The District Signals are located at Peshawar, Waziristan and Kohat.

Royal Tank Corps.—Six Armoured Car Companies arrived in India in 1921. Two more Companies arrived in 1925. Two Group Headquarters were sanctioned in 1925. They are located as follows:—the Northern Group at Murree, this Group Headquarters commands Companies in the Northern and Eastern Commands. The Southern Group at Poona. This Group Headquarters commands Companies in the Southern and Western Commands. There is a school at Ahmednagar for the training of R. T. C. personnel and the conduct of experiments. The Colonel, Royal Tank Corps, at Army Head-quarters, acts as Technical Adviser on Tanks and Armoured Cars.

The smallest Tactical Unit is the sub-section (Two Armoured Cars). There are two sub-sections in a section, and 3 sections in a Company. Each section is commanded by a Captain or a subaltern, and the Company by a Major. In addition to 12 Armoured Cars (4 in each section), there is a mechanical reserve of 4 cars on the Headquarters of each Company.

5 Companies are equipped with Crossley Armoured Cars.

1 Company is equipped with Rolls-Royce 1921 Pattern.

1 Company is equipped with Rolls-Royce 1914.

1 Company is equipped with Austin Armoured Cars.

With the exception of the Company with Rolls-Royce 1914 pattern, which have only one Vickers Gun, all the remaining Armoured Cars are armed with two Vickers Guns.

The establishments of the Royal Tank Corps formations are shown below:—

—	British Officers.	British other ranks.	Followers.	Motor cars.	Motor cycles.	Armoured cars.	Lorries.
Group Headquarters	2	2	..	..	..	..	..
Tank Corps School	6	48	15	1	2	9	9
Armoured Car Company	12	145	39	2	6	16	10

Medical Services.—The military medical services in India are composed of the following categories of personnel and subordinate organisations:—

(*a*) Officers and other ranks of the Royal Army Medical Corps serving in India;

(*b*) Officers of the Indian Medical Service in military employment;

(*c*) The Indian Medical Department, consisting of two branches, *viz.*, (i) assistant surgeons and (ii) sub-assistant surgeons.

(*d*) Queen Alexandra's Imperial Military Nursing Service.

(*e*) The Queen Alexandra's Military Nursing Service for India.

(*f*) The Army Dental Corps.

(*g*) The Indian Military Nursing Service.

(*h*) The Indian Hospital Corps.

Of these categories, the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the

Indian Medical Department and the Queen Alexandra's Imperial Military Nursing Service and the Queen Alexandra's Military Nursing Service for India are primarily concerned with the medical care of British troops: while the officers of the Indian Medical Service, the sub-assistant surgeons of the Indian Medical Department and the Indian Troops Nursing Service are concerned, primarily, with the medical care of Indian troops. The Indian Hospital Corps serves both organisations.

Civilians of miscellaneous classes employed by the Army in Waziristan are given medical treatment in military hospitals, and arrangements have been made with the Headquarters of the Indian Red Cross Society for the medical treatment and care of cases amongst Indian Soldiers and followers of the Indian Army for chronic diseases, such as Tuberculosis, Leprosy and Diabetes.

Indian Army Service Corps and the Mechanical Transport Service.—The Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to a short time ago. The Indian Army Service Corps is administered by the Quartermaster-General, and is one of the principal services included in the Quartermaster-General's Department.

The Indian Army Service Corps is constituted in two main branches, namely: (*a*) Supply. (*b*) Animal transport, and is supplemented by the Mechanical Transport Service, which, in India, is constituted upon a special basis, but which is, generically, a sub-division of the Royal Army Service Corps organisation.

The strength of the establishment is shown by categories in the following table:—

SUPPLY.

Officers with King's commission ..	234
Indian officers	70
British other ranks..	360
Civilians	832
Followers	2,830
Total ..	4,326

ANIMAL TRANSPORT.

Officers with King's commissions.	90
Indian officers	184
British other ranks..	140
Civilians	146
Silladar Lance Naiks and Sarwans	960
Indian non-commissioned officers and drivers	14,139
Artificers and followers	2,184
Total ..	17,843

There are also 1,094 driver reservists.

The total numbers of mules and camels maintained under the present organisation, including the depots and the detachments in Aden, and Kashmir are 19,771 and 5,808 respectively. There are also 747 pack and draught horses and 612 ponies. Wheeled and pack transport are combined. The company on the lower establishment represents the pre-war "cadre," other companies being mantained in peace-time at full war establishment.

The mechanical transport establishment consists of the following:—

Light Lorries: 8 companies with 9 sections (higher establishment), 2 sections (lower establishment.) and 15 sections in cadres.

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes. The organisation as a whole is completed by a mechanical transport depot, a central stores depot, mobile repair units and workshops, of which the most important is the large heavy repair workshop constructed after the war at Chakala. Like the Indian Army Service Corps, the mechanical transport service is administered by the Director of Supply and Transport under the control of the Quarter Master-General. Exclusive of motor bicycles the total establishment now consists of 2,206 vehicles, with 982 vehicles spare and in reserve.

The mechanical transport is at present not actually a part of the Indian Army Service Corps. A scheme is, however, in operation by which the mechanical transport will be taken over by the Indian Army Service Corps. At present the officers of the service are mainly drawn from the Royal Army Service Corps, since at present there are no facilities in India for training officers in every branch of mechanical transport duties. The establishment of officers includes, however, a certain number of King's commissioned officers belonging to the Indian Army. The British subordinates of the service are drawn entirely from the Royal Army Service Corps. The establishment is completed by Indian officers with the Viceroy's commission, and Indian other ranks of the I.A.S.C. employed as drivers. A large number of Indians with non-combatant status are employed as artificers and followers. The strength and categories of the present establishments are shown in the following table:—

Officers with King's commissions.	157
Indian officers	37
British other ranks..	334
Indian other ranks	1,399
Civilians	333
Indian artificers	1,252
Followers	630
Total ..	4,142

There are also 2,138 reservists.

The post-war establishment of the Mechanical Transport in India will be as follows :—

(*a*) Field units—

8 Light M. T. Companies, consisting of 8 headquarters, 9 service sections (higher establishment), 2 service sections (lower establishment) and 15 sections in cadre.

10 M. T. Companies for motor ambulance convoys.

4 Mobile repair units.

(*b*) Maintenance units—

1 Heavy Repair shop.

3 Medium Repair Shops.

1 Central M. T. Stores Depot.

(*c*) Miscellaneous—

3 M. T. group, headquarters, M. T. technical inspectorate, I. M. T. depot for training Indian drivers and Aden M. T. Section.

The Ordnance Services which are partly under the Q.M.G. and partly under the M.G.S. may be broadly described as the agency whose duty it is to supply the army with munitions of war, such as small arms, guns, ammunition and other equipment of a technical military character, and also, under an arrangement introduced in recent years, with clothing and general stores other than engineering stores. A central disposal organisation is in operation under the control of the Master General of Supply to dispense with the Surplus Stores and waste materials of the different services of the Army and the Royal Air Force in India to the best advantage of the State.

Army Remount Department.—The following are among the most important duties imposed on the remount service:—(1) The mounting of the whole of the mounted services in India. (2) The provision of camels and draught bullocks for all units and services. (3) The maintenance of some 66,000 animals.(4) The enumeration throughout India of all animals available for transport in war. (5) The animal mobilization of all units, services and departments of the army. (6) A general responsibility for the efficiency of all the animals of the army both in peace and war. (7) The administration of the remount squadron formed in 1922 as a nucleus for expansion into three squadrons on mobilization. (8) Breeding operations of a direct character and a new horse-breeding area, which comprises the three civil districts of Multan, Montgomery and Dera Ghazi Khan, and will include the breeding grants in the lower Bari Doab Canal Colony.

The department is organised on lines corresponding to the remount service in the United Kingdom. Its composition is as follows: The Remount Directorate at Army Headquarters consisting of one Director, a Deputy Director, and a Staff Captain, 4 Remount officers, one attached to each Command Headquarters, 6 Superintendents of Remount Depots, 6 District Remount officers of horse-breeding areas and the Ahmednagar Stud, 15 Assistant Remount officers and 8 Veterinary officers.

Veterinary Services in India—The Veterinary Services are responsible for the veterinary care, in peace and war, of mounted British troops, Indian cavalry and artillery, I. A. S. C. units, the remount department (excluding horse-breeding operations), etc. The Veterinary Services include: The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India. The establishment of warrant and non-commissioned officers, India Unattached List, and Veterinary Assistant Surgeons of the Indian Army Veterinary Corps.

The Indian Army Veterinary Corps is organised in 12 sections, attached in peace-time to Class I veterinary hospitals at certain important stations.

Military Farms Department.—This department, which is under the control of the Master General of Supply, consists of two branches :—

(i) The military grass farms, which provide fodder for the army.

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops and families.

Educational Services.—The education of the army is under the control of the Army Educational Corps and of Indian officers borne, supernumerary to the establishment of units of the Indian Army. The establishment is as follows including training schools :—

British officers.	Indian officers.	B. O. Rs.	I. O. Rs.	Civilians.
67	38	167	11	247

Terms of service in the Indian army are as follows :—

Cavalry, 7 years' service in army.

Artillery, 6 years' service in army for gunners, 5 for drivers and 4 for the Heavy Battery personnel.

S. & M. Corps, 7 years' service in army (5 for the Burma S. & M).

Indian Signal Corps, 5 years' service in army.

Infantry and Pioneers (except Gurkhas, the 4th Hazara Pioneers and trans-frontier personnel of the Infantry), 5 years in army service and 10 years in the reserve. (*Note*: This is the minimum period of service with the colours. 15 years in Colour and Reserve service must be done).

Gurkhas, 4th Hazara Pioneers, trans-frontier personnel of the Infantry, and Indian combatant personnel of British Infantry Battalions, 4 years' service in army.

Indian Military establishments of the Indian Army Ordnance Corps, 4 years' service in the army.

Animal transport personnel of the Indian Army Service Corps, drivers of mechanical transport and all combatants of the Army Veterinary Corps, 6 years' service in army and 4 in the reserve.

All combatants in the Works Corps, 2 years' service in army.

Bandsmen, musicians, trumpeters, drummers, buglers, fifers and pipers, 10 years' service in army.

Except in the case of those enrolled in the Works and of those who are non-combatants, all School-masters, clerks, artificers, armourers, engine drivers, farriers, carpenters, tailors and bootmakers, 10 years' service in army.

The period laid down for service in the army may be extended. Combatants may be enrolled direct into the Reserve, in which case there is no minimum period of service, but no one is allowed to serve in the reserve or in any class of the reserve for a longer period than is permitted by the regulations in force.

Frontier Militia and Levy Corps.—These forces are "Civil" troops, *i.e.*, they are administered and paid by the Civil authorities and not by the Army. They are, however, officered by Officers of the Regular Indian Army. These forces were raised for duty on the North-West Frontier and at present consist of the following:—Kurram Militia, Tochi Scouts, South Waziristan Scouts, Chitral Scouts, Gilgit Scouts, Zheb Levy Corps and the Mekran Levy Corps. The various names show the localities in which each force is situated.

The Auxiliary Force.

After the war, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adoption of compulsory military service would be undesirable. It was recognised, however, that India needed some adequate auxiliary force, if only on a voluntary basis, that could be trained to a fairly definite standard of efficiency; and in the result, an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age, the more extended training being carried out by the younger members, the older members being obliged to fire a musketry course only. It was laid down that military service should be purely local. As the form of service that would be most suitable varies largely according to localities, the local military authorities, acting in consultation with the advisory committee of the Auxiliary Force area, were given the power of adjusting the form of training to suit local conditions.

The Auxiliary Force comprises all branches of the service, cavalry, artillery, engineers, infantry—in which are included railway battalions,—machine gun companies, Signal companies, R.A.S.C. Sctions, and the Medical and Veterinary Corps. Units of the Auxiliary Force are under the command of the local military authority, and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and, on completion of the scheduled period of annual training, every enrolled member of the force is entitled to a certain bonus. Men enrol in the Auxiliary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years' service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area.

The duties connected with the Defence Light Sections at Calcutta, Bombay, Karachi and Rangoon are performed by the Field Companies R. E. (A. F. I.) at those stations, assisted by Indian ranks of Sapper and Miner Units.

Indian Territorial Force.

The Territorial Force is one of the several aspects of the Indianisation of the military services. The force is intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances, involve service overseas. The force is the direct successor of the Indian section of the Indian Defence Force created during the war. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units can be given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

The Indian Territorial Force consists at present of three main categories, provincial battalions, urban units and the *university training corps units*. The last are recruited from the staff and students of Indian universities. They are trained all the year round, and are equipped with a permanent staff of British instructors. On ceasing to belong to a university, a member of the corps is discharged. In the case of the university training corps units it is not intended to enforce the liablity to render actual military service. Their purpose is mainly educative, to inculcate discipline and form character. But, incidentally, they are expected to be a source of supply of both officers and men for the provincial and urban units.

The members of the *provincial battalions* accept the full liability for service which has been mentioned. Seven such battalions were constituted in the first instance. The number is now eighteen and, though the unit establishment has not been completely filled in all cases, the movement has already achieved a greater degree of success than might have been anticipated at so early a stage. It is in contemplation to diversify and extend the scope of the force by constituting some ancillary units. Although for the present the infantry arm only has been

created with the addition of the I.T.F. Medical Branch, the force by law may include every other army service.

Men enrol in the provincial battalions for a period of six years, the period being reduced to four years in certain cases. On the completion of the first period they can re-enrol voluntarily for further specified periods. During his first year, every man does preliminary training for one calendar month and during every year he receives one month's periodical training. Members of *urban units* have only a provincial liability. 4 such units were constituted in 1928 in Bombay, Madras, and the United Provinces, one of these being an entirely Parsi battalion. Members enrol for a period of 6 years and train all the year round. During his first year every man does 32 days' preliminary training, and in every subsequent year 16 days' periodical training.

The Indian State Forces.

The Indian State Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Princes and Chiefs. Government, on the other hand, provide permanently a staff of British officers, termed "Military Advisers and Assistant Military Advisers," to assist and advise the Ruling Princes in organising and training the troops of their States.

After the war had ended, the Indian States, like the Government of India, undertook a military reorganisation, which in a number of cases, has already been carried out. The principal feature of the new arrangements, as adopted more or less generally, is that in future the Indian State Forces should be composed of three categories of troops, namely:

Class A.—Troops in this class are organised on the present-day Indian Army system and establishments, and, with some exceptions, are armed with the same weapons as corresponding units of the regular Indian Army.

Class B.—These troops consist of units which are, in most cases, little inferior in training and discipline to troops of Class A; but they are not organised on present-day Indian Army establishments. They have, as a rule, retained the system of the pre-war formations. Their standard of armament is pitched lower than that of Class A troops.

Class C.—These troops consist in the main of militia formations, which are not permanently embodied. The standard of training, discipline, and armament, prescribed for this class, is generally lower than the standard prescribed for Class B troops.

The authorized and actual strength of the Indian State Forces on the 1st October 1927 amounted to—

	Authorized strength.	Actual strength on the 1st October 1927.
Artillery	1,481	1,370
Cavalry	9,714	8,362
Infantry	30,046	23,322
Camel Corps	465	460
Motor Machine Gun Sections	75	24
Sappers	1,178	990
Transport Corps ..	1,611	1,530
Grand total ..	44,570	36,058

Officers.

There are two main categories of officers in the Indian Army; those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder. Until recent years Indians were not eligible for King's Commissions, but a limited number can now obtain such commissions, on entry into the Indian Army through the Royal Military College, Sandhurst and the Royal Military Academy, Woolwich.

King's Commissioned Officers for the Indian Army are obtained from two main sources: from among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of Officers belonging to British units. The former is the principal channel of recruitment; the latter being only resorted to when, owing to abnormal wastage or for some other special reason, requirements cannot be complete by means of cadets from Sandhurst. A third source is from among University candidates. When a cadet has qualified at Sandhurst and has received his commission, he becomes, in the first instance, an officer of the Unattached List, and is posted for a period of one year to a British battalion or regiment in India, where he receives a preliminary training in his military duties. At the end of the year, he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the army draw their officers from combatant units, as it has hitherto been regarded as essential that every officer should, in the first instance, receive a thorough grounding in combatant

duties, and acquire at first hand an intimate knowledge of the requirements of the combatant arms.

The promotion in rank of King's commissioned officers of the Indian Army is regulated by a time-scale up to the rank of Lieutenant-Colonel, but is subject also to certain professional examinations and tests being successfully passed. The rank of Lieutenant-Colonel is in normal course, attained at 26 years' service; promotion beyond this rank is determined by selection.

Indian Officers.—One of the most momentous decisions of the Great War, so far as the Indian Army is concerned, was that which rendered Indians eligible to hold the King's commission in the army. It was proposed that King's commissions should be obtainable by Indian gentlemen in the following three ways: (1) By qualifying as a cadet through the Royal Military College, Sandhurst; (2) by the selection of specially capable and deserving Indian officers or non-commissioned officers of Indian regiments who had either been promoted from the ranks or joined their regiments on direct appointment as jemadar; (3) by the bestowal of honorary King's commissions on Indian officers who had rendered distinguished service, but whose age and lack of education precluded their being granted the full King's commission. A number of honorary King's commissions are still granted annually to a limited number of Viceroy's commissioned officers of the class described in the third category mentioned above. The second of the sources of selection mentioned has since been almost entirely abandoned for the reason that a Viceroy's commissioned officer of this class cannot, as a practical matter, hope to have a normal career as a King's commissioned officer. It is the first of the three avenues of selection mentioned which gives the fullest opportunity to the Indian of satisfying a military ambition and of enjoying a military career on terms of absolute equality with the British officer, who, as a general rule, also enters the army by qualifying at Sandhurst. It was decided that, in the first instance, ten vacancies at Sandhurst should be reserved annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales' Royal Indian Military College at Dehra Dun, a Government institution for the preliminary education of Indians who desire to qualify for the King's commission in the army through the Royal Military College, Sandhurst The arrangements so far made enable a maximum of 70 boys to be in residence at the college at any one time, and the normal course of education is planned to occupy six years. These dispositions will render it possible to provide from Dehra Dun sufficient candidates to fill the ten vacancies at Sandhurst which are at present allotted annually to Indians. In February 1923, it was decided that eight units of the Indian Army should be completely Indianized. The units selected for Indianization were: 7th Light Cavalry; 16th Light Cavalry; 2/1st Madras Pioneers; 4/19th Hyderabad Regiment; 5th Royal Battalion, 5th Mahratta Light Infantry; 1/7th Rajput Regiment (Q. V. O. L. I.); 1/14th Punjab Regiment; 2/1st Punjab Regiment.

Training Institutions.

The following institutions exist in India for the higher training of military personnel and for the education of instructors for units:—

Staff College, Quetta.
Senior Officers' School, Belgaum.
School of Artillery, Kakul.
Equitation School, Saugor.
Small Arms School, Pachmarhi (*a*).
Army School of Physical Training, Ambala.
Machine Gun School, Ahmednagar (*a*).
Army Signal School, Poona.
Royal Tank Corps School, Ahmednagar.
Army School of Education, Belgaum.
Army School of Cookery, Poona.
Army Veterinary Schools, Ambala and Poona.
Indian Army Service Corps Training Establishment, Rawalpindi.

(*a*) Following the procedure adopted at Home, the Small Arms and Machine Guns Schools were amalgamated in February 1927, the two Schools are not yet located in one place. Hence they are shown as two Schools above, the one for Small Arms at Pachmarhi and that for Machine Guns at Ahmednagar.

The object of these Schools is to ensure to all the units throughout the army a constant supply of officers, warrant officers, non-commissioned officers and men, provided with a thorough up-to-date knowledge of various technical subjects, and with the ability to pass on this knowledge.

The King George Royal Indian Military Schools at Jhelum and Jullundur also exist for the education of the sons of Indian soldiers with a view to their finding a career in the Indian Army, and the Prince of Wales' Royal Indian Military College at Dehra Dun exists for the preliminary education of Indians who desire to qualify for the King's Commission in the Army through Sandhurst.

Army in India Reserve of Officers.—Previous to the Great War there had been what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved that for many reasons this reserve did not meet the requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A. I. R. O. published in 1926, had the effect of stimulating recruitment. They provide that the following gentlemen may be granted commission in the Reserve:—

(1) Officers who having held King's commissions and retired from H. M.'s forces, are not liable for further service.

(2) Officials, other than Military officers, serving under the Government of India or a local Government.

(3) Private gentlemen residing in India, possessing the requisite qualifications and previous training.

The Reserve comprises each arm and branch of the Army and the officers are posted to definite branches and units.

All officers are required to undergo periodical training up to a maximum of 30 days a year and receive pay and allowances admissible to regular officers of the same rank and arm of the service, during training.

Members of the Auxiliary Force, India, may become "officers designate" for the grant of commissions in the A. I. R. O., upon the calling to army service of that reserve.

Officers and officers designate receive Rs. 200 annually as a retaining fee, and an outfit allowance of Rs. 400, on joining.

The strength of the Reserve on the 1st September 1928 was 1254.

Recruitment for the Reserve has been extended to Ceylon, the number to be commissioned in Ceylon being limited to 50.

The Fighting Races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large; it is probable that these classes preserve their preponderance. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished sodiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, of whom there are twenty complete battalions, which during the war were considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier, but the Garhwalis and Kumaonis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army, and have sustained the English flag in every campaign in the East. Their high caste and consequent prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish many battalions. The Garhwalis are Hill Rajputs, good and gallant soldiers, who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which were all we had in 1914 have since been added to. The Jats are a fine and warlike race of Hindus found in the Delhi and Rohtak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahrattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji, the founder of the Mahratta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned, other caste men from the south and other parts of India have filled the ranks of the Pioneer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged.

During the war the Victoria Cross was awarded for conspicuous gallantry to 2 Indian officers, 4 non-commissioned officers and 6 other ranks of the Indian Army.

The Military Cross was awarded to 96 Indian Officers for distinguished service rendered during the Great War and to 3 Indian Officers for service in Waziristan.

A large number of Indian Officers and men were also granted Foreign decorations.

Summary of India's Effort in the War.—In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war are reviewed. His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number, 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,696 deaths from all causes. The number of animals sent overseas was 175,000.*

* For a record of the services of the Indian Army in the War, see "The Indian Year Book" of 1920, p. 152, *et seq.*

Budget Expenditure on National Defence.

A part of the Defence expenditure on the Indian Budget is incurred in England, the nature of such expenditure being indicated in the detailed Tables of Army, Marine and Military Engineer Services expenditure. This expenditure is met by transfer of funds from India. From the 1st April 1920 to the 31st March 1927, the accounts were prepared on the basis of the rate of 2 per rupee for the conversion of English sterling transaction into rupees. From the 1st April 1927 the accounts are being prepared at the standard rate of 1s. 6d. per rupee.

As a rule, the receipts collected by the various departments are not set off against expenditure as appropriations in aid, but are shown separately on the receipts side of the budget. This is especially the case with the receipts of the Military Departments, which amount to considerable sums.

The Provincial Governments incur no expenditure for Military purposes.

SUMMARY OF DEFENCE EXPENDITURE (Gross.)

Table 1.

	1926-27. Closed Accounts.	1927-28. Revised Estimates.	1928-29. Budget estimates as passed.
	Rupees (000's omitted.)

Non-effective	8,12,09	8,32,89	8,38,95
Grand Total ..	51,17,33	55,03,63	52,82,93

The amounts expended in England on effective services consist of such charges as payments to the War Office and Air Ministry in London in respect of British Forces serving in India, the transport to India of these forces, and payments on account of stores taken to India by British Forces, educational establishments in England for Indian Services, leave pay of Indian and British service Officers on the Indian Establishments, purchase of imported stores, etc. The expenditure on non-effective services consists of payments to the War Office in London for retired pay to British forces for services in India and to non-effective and retired officers of the Indian Service, and of various gratuities.

Of the sum of Rs. 551 millions allotted in the Budget for 1927-28 to meet the net expenditure on Military Services (*i.e.*, after deducting Receipts), Rs. 582 millions will be available for expenditure under the heading "Army," made up of Rs. 385·8 millions for expenditure in India and Rs. 122·4 millions in England.

The gross working expenses of military establishments, such as bakeries, pasture and dairy farms, army clothing factories, and storage depots, army ordnance factories and base mechanical transport workshops are included in the Budget.

The division of expenditure on *Military Engineer Services* between India and England is shown below :

—	1926-27. Closed Accounts.	1927-28. Revised Estimates.	1928-29. Budget Estimates.
	(Rupees 000's omitted)		
India (including exchange)	4,37,58	4,40,95	4,31,74

INDIAN TROOPS.

The average strength of Indian troops, including those on duty in China and Nepal and other stations outside India in 1926 was 135,146.

The following table gives below the actuals and ratios of sickness, deaths, and invaliding for the quinquennial period 1910-14 and 1915-19 and for the years 1920 to 1927 inclusive :—

Period.	Average strength.	Admissions.	Deaths.	Invalids.	Average constantly sick.	Ratio per 1,000 of strength.			
						Admissions.	Deaths.	Invalids.	Average constantly sick.
1910-14 (average)	130,261	71,213	573	699	2,662	544·6	4·39	5·4	20·7
1915-19 (average)	204,298	161,028	3,435	4,829	7,792	788·2	16·81	23·6	38·1
1920 ..	216,445	164,987	2,124	4,564	9,265	762·3	9·81	21·1	42·8

THE EAST INDIES SQUADRON.

Since 1903 a squadron of the Royal Navy, known as the East Indies Squadron, has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition, the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1903 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1906, when the policy of withdrawal from Eastern waters was inaugurated, it consisted of two second class and two third class cruisers, and remained at this strength until 1910: when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were lent from the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship Swift-

sure had taken the place of the second class cruiser which had been flagship, and a modern second class cruiser replaced the Perseus.

The Squadron in 1929.—The composition of the Squadron (Fourth Cruiser Squadron) is as follows:—

"Effingham" (Flag), Cruiser: 9,770 tons "Emerald," Cruiser, 7,550 tons; "Enterprise," Cruiser: 7,550. Sloops "Crocus," "Cyclamen," and "Lupin". Special Service vessel "Triad" (Senior Naval Officer, Persian Gulf.) Survey Ship "Ormonde."

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details :—

Received from	Nature of Service.	Total.
		£
India ..	Maintenance of His Majesty's Ships in Indian Waters..	100,000
	Indian Troop Service (on account of work performed by the Admiralty)	3,400
	Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf	64,000
Australian Commonwealth Dominion of Canada.	Contributions on account of liability for Retired Pay of Officers and Pensions of Men lent from the Royal Navy.	10,800
Australian Commonwealth.	Survey of the N. W. Coast of Australia	7,500
Do.	Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve..	41,600
Dominion of New Zealand.	Maintenance of an Australasian Squadron and of the Imperial Navy generally, also of a branch of the Royal Naval Reserve	100,000
Union of South Africa ..	General maintenance of the Navy	85,000
Newfoundland ..	Maintenance of a branch of the Royal Naval Reserve ..	3,000
	Total ..	415,800

India's Marine Expenditure.

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements which date from 1896-7, the subsidy of £100,000 a year is paid for the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits, except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

The question of a new distribution of the burden of the cost of Imperial Naval defence was discussed at the Imperial Conference in London in October—November 1926. The matter appeared to be one on which the delegates could form no new decision without further consultations in their respective capitals and no resolution was passed.

The Royal Indian Marine is being reorganised so as to form the nucleus of an Indian Navy. The R. I. M. Ship "Dalhousie" has been reconditioned for use as a Depot Ship. Three of the R. I. M. Ships have been or are being reconditioned for use as sloops of war in the R. I. M. Negotiations are in progress with the Admiralty for the provision of a fourth sloop for the new service. The necessary legislation in Parliament has been undertaken and completed and the consequential Indian Legislation in regard to the discipline of the new force will be introduced in the Indian Legislature as soon as possible.

ROYAL INDIAN MARINE.

The Royal Indian Marine (The Sea Service under the Government of India) traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Hoseander (or Osiander), were despatched from England in 1612 under a Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows:—

Hon. E. I. Co.'s Marine	..	1612—1686
Bombay ,,	..	1686—1830
Indian Navy ,,	..	1830—1863
Bombay Marine ..	..	1863—1877
H. M. Indian Marine ..	..	1877—1892
Royal Indian Marine ..		1892, Present day.

The Marine has always been most closely connected with Bombay, and in 1668 when the E. India Co. took over Bombay, Captain Young of the Marine was appointed Deputy

Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Director.

War Service of the Marine.

1612-1717 Continuous wars against Dutch, Portuguese and Pirates for supremacy of West Coast of India. 1744 War with France, capture of Chandernagore, and French ship Indienne. In 1756 Capture of Castle of Gheria. 1774 Mahratta War, capture of Tannah. Latter part of the eighteenth century, war with French and Dutch, Capture of Pondicherry, Trincomalee, Jafnapatam, Colombo, etc. 1801 Egyptian campaign under Sir Ralph Abercrombie. 1803 War with France. 1810 Taking of Mauritius and capture of French ship in Port Louis. Early part of the nineteenth century suppression of Jowasmi Pirates in the Persian Gulf. 1811 Conquest of Tara. 1813 Expedition against Sultan of Sambar. 1817-18 Mahratta War, capture of Forts at Severndroog. 1819 Expedition to exterminate piracy in the Persian Gulf. 1820 Capture of Mocha. 1821 Expedition against the Beni-koo-Ali Arabs. 1824-26 First Burma War. 1827 Blockade of Berbera and Somali Coast. 1835 Defeat of Beni Yas Pirater. 1838 Expedition to Afghanistan and capture of Karachi. 1838 Capture of Aden. 1840-42 War in China. 1843 Scinde War Battle of Meanee, capture of Hyderabad. 1845-46 Maori war in New Zealand. 1848-49 War in Punjab, siege of Mooltan. 1852 Second Burma War, Capture of Rangoon, Martaban, Bassein, Prome and Pegu. 1855 Persian War, capture of Bushire, Muhammerah and Ahwaz. 1856-57 War in China. 1857-59 The Indian Mutiny. 1859 Capture of the Island of Beyt. 1860 China War, Canton, Taku Forts, Fatshan and Pekin. 1871 Abyssinian War. 1882 Egyptian Campaign. 1885 Egyptian Campaign. 1885 Third Burma War. 1889 Chin-Lshai Expedition. 1896 Suakin Expedition. 1897 Expedition to Imtirbe, Mombassa E. Africa. 1899-1902 S. African War. 1900-01 Boxer Rebellion in China relief of Pekin, 1902-04 Somaliland Expedition, Suppression of Arms Traffic operations, Persian Gulf, 1912-14.

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships "DUFFERIN," "HARDINGE," "NORTHBROOK," "LAWRENCE," "DALHOUSIE" and "MINTO" had their guns mounted and served as Auxiliary Cruisers. Officers also served in the Royal Navy in the Grand Fleet, Mediterranean North Sea, North Red Sea and Caspian Sea Fleets.

In addition to transport duties in Indian Ports, Officers were sent to Marseilles, East Africa and Egypt for such duties, and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia, and it was necessary to enlist a number of Temporary Officers, Warrant Officers and men to the numbers of approximately 240, 60 and 2,000 respectively for these and other duties.

When the War Office assumed full control of Operations in Mesopotamia a large number of Regular and Temporary Officers and men were seconded to the Royal Engineers and General Service respectively for duties in the Inland Water Transport which controlled all River Transport work in that country, and these officers held many important executive appointments in that unit.

The movements of all sea transports between India and the various theatres of War were controlled by Marine Officers.

Trawlers were built in the Bombay and Calcutta Dockyards and mine sweeping operations were carried out with these and launches off Bombay and elsewhere, the trawlers were also used for towing duties.

Retired Royal Indian Marine Officers were employed on naval transport duties in England and France, and also in very responsible positions with the Inland Water Transport in France.

Service in the War 1914-18.—The Royal Indian Marine, though a small Service compared with the Army and Navy, played a very active and conspicuous part in the European War. These are set out in detail in the Indian Year Book for 1922 and earlier editions (*q. v.* pp. 202 *et seq.*).

Personnel, 1928.

HEADQUARTERS STAFF.

Flag officer Commanding, Royal Indian Marine and P. N. T. O., East Indies.	Rear Admiral H. T. Walwyn, C.B., D.S.O.
Naval Secretary ..	Paymaster Commander E. A. Jolley, R. N.
Flag Lieutenant ..	Lieut. F. C. Hammond, R. I M.
Chief of the Staff, R. I. M., and Captain Supdt., R. I. M., Dockyard.	Captain H. Morland, R.I.M.
Commander of the Dockyard ..	Commander R. H. Garstin, O.B.E., R.I.M.
Squadron Minesweeping Officer ..	Lieut.-Comdr. M. R. T. Knight, R. N.
Squadron Gunnery Officer ..	Lieut.-Comdr. F. R. Holmstrom, R. N.
Squadron Signal Officer ..	Lieut. St. J. A. D. Garniss, R.I.M.
Officer-in-charge, Chart Depot ..	Lieut. E. C. Streatfeild-James, R.I.M. (Borne in "Investigator.")
Engineer Manager of the Dockyard ..	Engineer Captain W. A. Williams, R.I.M.
1st Assistant to the Engineer Manager of the Dockyard. ..	Engineer Lieut.-Comdr. T. Kerr, D.S.C., R.I.M.
2nd Assistant to the Engineer Manager of the Dockyard. ..	Engineer Lieut.-Comdr. J. H. Mackay, R.I.M.

Marine Store Officer .. Engineer Commander W. W. Collins, R.I.M.
Financial Adviser to the Flag Officer Comdg. R.I.M. .. R. E. Odling, Esq.
Chief Superintendent to the Flag Officer Comdg. R.I.M. .. E. Osborne Carey, Esq.

MARINE TRANSPORT STAFF.

Divisional Marine Transport Officer, Bombay .. Commander B. Gordon.
Asst. Marine Transport Officer, 1st Grade, Bombay .. Lieut.-Comdr. G. M. Osborne-Smith.

CIVILIAN GAZETTED OFFICERS.

Constructor .. W. J. Kenshett, Esq. (Leave.)
W. G. J. Francis, Esq. (Offg.)

OFFICERS.

Captains	9
Commanders	18
Lieutenant-Commanders, Lieutenants, Sub-Lieutenants and Midshipmen	51
Engineer-Captain	1
Engineer-Commanders	7
Engineer-Lieutenant-Commanders, Engineer-Lieutenants and Engineer-Sub-Lieutenants	42
WARRANT OFFICERS.	
Boatswains	22
Warrant Writers	12

PETTY OFFICERS AND MEN.

Who are mostly recruited from the Ratnagiri District of the Bombay Presidency.

SHIPS.

Sloop Minesweeping	H. M. I. S. Clive	2,100 tons	2,422	Horse Power.
Sloop	,, Cornwallis	1,740 ,,	2,700	,,
Sloop Minesweeping	,, Lawrence	1,412 ,,	2,020	,,
Surveying Vessel	,, Investigator	1,355 ,,	1,500	,,
,,	,, Palinurus	538 ,,	486	,,
Depot Ship	,, Dalhousie	1,650 ,,		
Patrol Vessel	,, Pathan	832 ,,	3,500	S. H. P.
,,	,, Baluchi	755 ,,	3,500	,,

In addition to the above there are 23 vessels composed of steam trawlers, service launches, target towing tugs, distributed at Bombay, Calcutta, Aden and Karachi.

Dockyards.

There were two Royal Indian Marine Dockyards at Bombay and at Calcutta, the former being the more important. The one at Calcutta has been closed. There are 5 graving docks and a wet basin at Bombay, together with factories.

Medical Staff.

Marine Surgeon, Lieutenant-Colonel A. N. Thomas, D.S.O., I.M.S.

Warrant Officer in Medical Charge, Dockyard Dispensary, Assistant Surgeon J. B. D'Sousa, I.M.D.

R. I. M. Warrant Officers.

Warrant Master-at-Arms, Dockyard Police, Mr. C. Mahon, Boatswain.

Boatswain-in-charge R I.M. Ordnance Depot, Mr. P. O' Hara, Boatswain.

Asst. Warrant Master-at-Arms, Dockyard Police, Mr G. Mattison, Boatswain.

Boatswain of the Dockyard, Mr. A. H. Lovett, M.B.E. Boatswain.

Police Boatswain, Mr. Sk. Kadir Sk. Jaino Boatswain, R. I. M.

Police Boatswain, Mr. Sk. Mahamad Sk. Bhicoo, Boatswain, R.I.M.

Appointments.

In addition to the regular appointments in the ships of the Royal Indian Marine, and in the R. I. M. Dockyard, the following appointments under local Governments are held by the officers of the Royal Indian Marine:—

BOMBAY.

Port Officer; Assistant Port Officer, Principal Engineer and Ship Surveyor and 2nd 3rd and 4th Engineers and Ship Surveyors to the Government of Bombay.

CALCUTTA.

Port Officer, Deputy Port Officer and Deputy Shipping Master, Principal Engineer and Ship Surveyor, 2nd, 3rd and 4th Engineers and Ship Surveyors to the Government of Bengal.

NARAYANGANJ (Bengal).

Engineer Superintendent, Government Dockyard.

BURMA.

Principal Port Officer, Burma, 1st and 2nd Assistant Port Officers, Rangoon. Principal Engineer and Ship Surveyor and Superintending Engineer to the Government of Burma, Assistant to the Principal Engineer and Ship Surveyor and Superintending Engineer to the Government of Burma and Engineer Superintendent of Government Vessels in Lower Burma.

MANDALAY.

Superintending Engineer.
Port Officer.

BASSEIN.

Port Officer.

MOULMEIN.

Port Officer.

CHITTAGONG.

Port Officer and Engineer and Ship Surveyor.

MADRAS.

Presidency Port Officer and Deputy Conservator of the Port.

ADEN.

Port Officer.

KARACHI.

Port Officer, Assistant Marine Transport Officers and Engineer and Ship Surveyor.

PORT BLAIR.

Engineer and Harbour Master.

THE ROYAL INDIAN NAVY.

The official announcement of the proposal to reconstruct the Royal Indian Marine as a Government department, to be called the Royal Indian Navy, was made by the Viceroy in the Council of State in February, 1926. He said that the creation of an Indian Navy had been under the consideration of the Government of India for some time past, and the intention of Government to take measures was strengthened by the recommendations of the Mercantile Marine Committee to reorganise the Royal Indian Marine on the lines of a combatant naval service. After consulting several naval experts the Government of India appointed a committee to formulate definite proposals.

The following were the members of the Committee: President.—General Lord Rawlinson, Commander-in-Chief, India; Members.—His Excellency Rear-Admiral (now Vice-Admiral) H. W. Richmond, Commander-in-Chief, His Majesty's ships and vessels, East Indies station; Sir B. N. Mitra, member of the Council of the Governor-General of India; Mr. E. Burdon, Secretary to the Government of India, Marine Department; Capt. E. J. Headlam, Director of the Royal Indian Marine.

The Committee met at Delhi during February 1925 and prepared their report which was approved in draft form by the late Lord Rawlinson before his death in March 1925. It stated generally: "The scope of the task entrusted to us is to draw up a scheme for the purpose of putting into effect a policy defined in the following formula: 'The reconstruction of the Royal Indian Marine as a combatant force to enable India to enter upon the first stage of her own naval development, and ultimately to undertake her own naval defence.'

Our **terms of reference** arranged for convenience in the order in which we shall deal with them are as follows:—

To prepare a scheme for the reorganization of the Royal Indian Marine so as to form the nucleus of an Indian Navy with special reference to (1) the functions to be ultimately performed by the Indian Navy and the methods of employment with a view to its undertaking those functions. (2) The number and class of vessels that can be maintained with available budget allotment. (3) Recruitment, strength, training and conditions of service of personnel. (4) Relations between the higher command of the Indian Navy, the Government of India and the Commander-in-Chief, East Indies, including the proposed employment of a Chief, Naval Staff, India. (5) Provision for and maintenance of vessels including the continuance or abolition of the Royal Indian Marine Dockyard."

A Sea-going Force.—The Committee observes that by far the most important aspect of the new force in its early stages will be its duty as a training squadron. The new personnel will need to be thoroughly trained in gunnery, mine sweeping, harbour defence and seamanship. In this connection we cannot insist too strongly on ships of the Indian Navy becoming from the first a sea-going force. Efficiency and enthusiasm alike will melt away if the new navy remains in port and practises nothing but harbour defence. A valuable service which we think that the Indian navy should be able to undertake in the near future will be the responsibility for policing the Persian Gulf in peace time, by which means the three vessels maintained in those waters by the Imperial Government will be set free of other duties at present performed by the Royal Indian Marine. We consider that the Marine survey should be retained, as its work in peace and war is essential for fighting sea service. Control of station ship at Aden, Port Blair, Rangoon and the Perian Gulf, to attend to the conveyance of corps and officials and to supervise the work of lighting and buoying in adjacent waters should not be a function of the new navy. Retention of these responsibilities would not be, in our opinion, compatible with development of a fighting force. The work of carrying troops can be contracted for commercially at rates which could hardly fail to be cheaper than existing arrangements. The new service should also be responsible for marine transport at present carried out by the Royal Indian Marine. The cost of storage and maintenance in this connection will be a charge against the Indian Navy.

Peace Time Functions.—The functions of the new Indian Navy in peace time will therefore be as follows: (*a*) Training of personnel for service in war; (*b*) Services required by the Indian Government in the Indian Ocean and Persian Gulf; (*c*) organization of the naval defences at the ports which are under the control of the Indian Government; (*d*) survey work in the Indian Ocean; (*e*) Marine transport work for the Government of India.

We recommend that in accordance with its new functions the service should be known as the Royal Indian Navy and should fly the White Ensign, which is the recognised flag of the naval fighting forces of the Empire.

As regards the number and class of vessels the Committee says: "On the assumption that these will be the functions of the Indian Navy we consider that a squadron of four sloops, two patrol craft vessels, four trawlers and two survey ships, together with one depot ship, as already suggested, would suffice to begin with."

The Committee estimate that the net **annual cost** of maintaining such a force would amount at first approximately to Rs. 63 lakhs. This figure is exclusive of the following items: (1) Rs. 12,50,000 cost of lighting and station ships which should be met from lighting fees and debited to other departments. At present two lakhs of this expenditure is debited to political estimates and the remaining ten and a half lakhs to marine estimates. (2) Rs. 4,00,000 for military launches which will be included in military estimates. (3) Rs. 1,14,000 on account of transport establishment, hitherto debited to His Majesty's Government. (4) Pension charges for ratings which will be a negligible figure for the first few years.

The Committee then refer to the estimates of the last two under marine department and observe that, taking the present cost of the Royal Indian Marine to be an average of the years 1924-25 and 1925-26 the annual cost of the proposed forces would compare as follows:

Royal Indian Marine total net cost, Rs. 51,62,000.

Net annual cost of Indian Navy, Rs. 62,60,000.

The cost on lighting and station ships and military launches would remain the same, namely, Rs. 16,50,000. Thus the excess of the annual cost in respect of the Indian Navy over that of the Royal Indian Marine would be Rs. 10,98,000. This excess, however, is likely to be reduced to a considerable extent by the leasing of dockyards and still further if, as is contemplated, the Government of India institute a system for the levy of fees for lighting on shipping companies.

Apart from recurring expenditure the Committee estimate that there will be initial expenses, assuming that new sloops will be provided by the Home Government on loan to the Indian Navy costing nine lakhs.

The Establishment.—The following establishment of officers and warrant officers will be required:—Flag-Officer Commanding, 1; Captains, 9; Commanders, 18; Lt.-Commanders, Lieuts. and Sub-Lieuts., 48; Midshipmen, 3; Boatswains, 22; Engineer Capt., 1; Engineer Commanders, 7; Engineer Lieut.-Commanders, Engineer Lieut., and Engineer Sub-Lieuts. 42; Assistant Surgeons, 10; Clerks 12.

The figures for the executive and engineer officers include provision for the following port appointments at Calcutta, Rangoon, Madras, Bombay, Karachi and Aden:—Captains, 5; Commanders, 5; Lieut.-Commander, 1; Engineer Commanders, 3; Engineer Lieut.-Commanders, 10; Boatswain, 1.

Commissions for Indians.—The nature of the Commissions to be granted to officers in the Indian Navy is of importance. We recommend that King's Commissions similar to those now held by officers in the Royal Indian Marine be granted to British and Indian officers alike. Commissions should confer an authority limited to the force in which they are granted, namely, the Royal Indian Navy. We strongly deprecate the use of any form of commission which might convey the impression that the officers of the Indian Navy held a purely subordinate status, such as is held by the Viceroy's commissioned officers in the Indian Army. With the proposed initial strength of the force the recruitment of executive officers will be required at a rate of about three a year. We agree generally with Admiral Richmond's recommendation that British and Indian boys should enter by competition at the age of 18 exactly in the same way as public school cadets are now taken into the Royal Navy.

Recruitment of Cadets.—We also agree with the proposal that Indian cadets should be mainly recruited through the Prince of Wales College, Dehra Dun. The examination for the cadetship would be held simultaneously in England and in India. One appointment every year should be reserved for an Indian by either from Dehra Dun or an English public school, subject to reaching a minimum qualifying standard in examination. For some time at any rate standard of education at Dehra Dun will be appreciably lower than at an English public school. It will, therefore, probably be necessary to raise the age limit for Indians recruited from Dehra Dun to the Indian Navy from 18 to 19 years on the analogy of a similar rule which already obtains in the case of Indian cadets for the Army. As the age of study at Dehra Dun is 12 to 18 it is likely that several years will elapse before any Indian cadets enter the navy from that institution. We do not see how this can be avoided. Cadetship should, however, be open to Indian boys at English public schools from the beginning. We understand that there is a considerable number of these, some of whom might be attracted towards the service in the Indian Navy. On passing the examination British and Indian cadets should undergo a course of two years' training in naval technical schools in the United Kingdom. On the completion of their training cadets would be given their commissions in the Indian Navy and would proceed to join a squadron in Indian waters.

Technical Training.—"We have considered the possibility of conducting initial technical training in India but this would entail very great expenditure on establishment, and would reduce to the vanishing point the funds available for ships. It occurs to us that Indian entrants into the navy *via* Dehra Dun will normally have no sea experience whatever before passing their entrance examination into the Navy and that if they are then sent straight to the United Kingdom and made to undergo sea training in small vessels in home waters there is a possibility of undue discouragement. We therefore propose that candidates for the Indian Navy in the last two years of their education at Dehra Dun would be given opportunities for short cruises and some sea training in ships of the training squadron for officers and warrant officers of the new service.

We do not propose any departure from the **rates of pay and pension** now drawn by officers of the Royal Indian Marine. These rates were revised in 1920 and are in our view likely to prove suitable. We need not, therefore, complicate our scheme for reorganization by introducing any proposals under this head. Ratings will be drawn from the same class and in the same manner as lascars are at present recruited for the Royal Indian Marine. The rates of pay will also be the same, but provision will have to be made for pensions and for furlough. We are confident that this class will provide suitable material for manning a combatant force and that if the terms of service are made attractive they will be forthcoming.

It might be found advisable to open up new fields of recruitment on the Malabar coast, Coromandel coast, at Chittagong and elsewhere. The training of recruits which will also include educational training will be carried out at Bombay in depot ship and the training squadron. It will be necessary in the initial stages to obtain the services of two specialist officers, (gunnery and minesweeping) to supervise the training of recruits. We have considered the

question of employing British petty officers instructors, but in view of the language difficulty we are doubtful whether their services would be of any value.

We recommend that **engineer officers** should be recruited for the Royal Indian Navy in precisely the same manner as they now are for the Royal Indian Marine, that is to say, appointments are made by the Secretary of State for India. A candidate must have served at least five years as an apprentice in a recognized engineering firm or a Government dockyard. A candidate must not be less than 21 or more than 25 years of age. In order to facilitate the entry of Indians into this branch of the service we recommend that the Government of India should give financial assistance to suitable Indian candidates who are anxious to undergo the necessary training and qualify for selection. This assistance might take the forms, *inter alia* of passage concessions and payments of premia to engineering firms and Government might also exert their influence to induce such firms to take Indians as apprentices. One vacancy in three should also be definitely reserved for an Indian if a suitable candidate is forthcoming. The terms of service should remain as at present. The port engineering appointments mentioned will continue to be available for promotion of these officers."

The report then discusses the important question of the command: "We propose that the command of the force should be vested in a flag-officer with the title of **'Flag Officer Commanding.'** This officer should be appointed from the Royal Navy at first, but later on the appointment should normally be held by an officer of the Indian Navy. We prefer the title of Flag Officer Commanding to that of Chief of the Naval Staff as more descriptive of his status and duties. 'Chief-of-Staff' implies an advisory position without executive powers . The tenure of office in our opinion should be for a minimum period of three years. In the early stages an Indian Navy could be administered by a single commander with a small staff. The simpler the organisation the more economically will it be controlled.

In his relation to the Government of India the officer commanding should be in a position substantially analogous to that of the Air Officer Commanding the Royal Air Force, that is to say he should be subordinate to the Commander-in-Chief in India in the latter's capacity of minister of defence and responsible to him for the administration and efficiency of the Navy. Like the Air Officer Commanding, he should also have the right of personal access to the Viceroy for the purpose of consultation on important questions relating to the Navy.

His headquarters should be in Bombay, but we propose that he should be at liberty to pay periodical visits to the headquarters of the Government of India in order to confer with the marine department.

In war time **unity of command** is essential, and we therefore recommend in war the ships and the personnel of the Indian Navy should automatically come under the direct control of the Commander-in-Chief, East Indies. For this reason as well as others we think it desirable that the post of Flag Officer Commanding should never be held by an officer senior on the navy list to the Naval Commander-in-Chief."

Leasing of Dockyard—As regards the maintenance of vessels, etc., the Committee state: "We have considered very carefully the question of the dockyard. There are three possibilities open to the Government of India: First to sell the yard outright; second to retain it under their own management; third to lease it for a term of years to a private firm. We have no hesitation in rejecting the idea of a sale."

After examining all suggestions the Committee state: "We recommend that the dockyard be offered for lease, and we consider that the lease should be for a period of fifteen years in the first instance. An essential condition should be that work for the Indian Navy should be given priority whenever required. The refit, however, of ships of the Indian Navy should not be a perquisite of this yard, but should be open to competitive tenders. The existence of other yards in Calcutta and Colombo and of Mazagaon dockyard in Bombay itself should act as a safeguard against monopoly and consequent inflation of charges."

Finance.

Indian finance has undergone such remarkable changes during the last few years that some general introduction of the present position is required. Originally there was one budget for the whole of India, the provinces receiving fixed allowances with which to meet their expenses. As the provinces grew in importance and in power, it was obvious that these conditions could not continue, and there developed a long struggle between the Provinces and the Government of India, the former claiming a larger share of the revenues raised within their borders and greater freedom in the spending of them, and the Government of India, perhaps not unnaturally, striving to retain its control. But by degrees the situation was improved into a working compromise. Contracts were made between the Government of India insuring to the provinces adequate and growing funds, an important element in these contracts being the division of certain heads of revenue between the Province and the Government of India, so as to give the Province as the tax collecting agency an incentive to develop revenues to a reasonable extent. Later, the provinces were given the product of certain fixed heads of revenue instead of the usufruct of divided heads, such fixed heads being decided by negotiation and agreement. A change of this character went deeper than appears at first sight. When the Government of India was entitled to half of any particular head of revenue it naturally kept a jealous eye on expenditure charged to that revenue, and changes of policy which might affect the yield of that revenue. This gave occasion to much interference with the provinces which was

increasingly resented. But when there was a cleaner cut between the revenues of the Government of India and of the provinces occasions for interference and control were naturally fewer. It may be said that by the time of the passing of the Reform Act of 1919 a satisfactory adjustment between the financial roles of the Government of India and the Provinces had been reached and the real friction was small.

The Clean Cut.—Progress went very much further in the Reform Act of 1919. By that instrument there was made what is for all practical purposes a clean cut between Imperial and Provincial finance. The Government of India took unto itself the whole product of those taxes which experience and usage have recognised as federal rather than State, which is a better description of the relations between the Government of India and the Provinces than Imperial and Provincial. Such taxes are customs, income tax, posts and telegraphs, railways and the salt tax. It made over to the provinces, for their free and unfettered disposal, the yield of the other great taxes, such as land revenue, excise, forests, stamps, and miscellaneous heads. The full definition and dividing line drawn under this scheme will be found in the section The Government of India (*q.v.*). But when a balance sheet on these lines was drawn it was found that the Government of India was insufficiently provided with money to carry out its responsibilities. The deficiency was 983 lakhs of rupees. It was very difficult to adjust this contribution equitably amongst the provinces concerned, because under the various settlements effected there was a wide disparity between the conditions of the various provinces. Ultimately the following decision was arrived at, with machinery for the gradual extinction of the provincial contributions, if ever the Government of India was in the happy position to be able to do without the funds.

In the financial year 1921-22 contributions shall be paid to the Governor-General in Council by the local Governments mentioned below according to the following scale :—

Name of Province.	Contributions (In lakhs of rupees).
Madras	348
Bombay	58
Bengal	63
United Provinces	240
Punjab	175
Burma	64
Central Provinces and Berar ..	22
Assam	15

From the financial year 1922-23 onwards a total contribution of 983 lakhs, or such smaller sum as may be determined by the Governor General in Council, shall be paid to the Governor General in Council by the local Governments mentioned in the preceding rule. When for any year the Governor General in Council determines as the amount of the contribution a smaller sum than that payable for the preceding year, a reduction shall be made in the contribution of those local Governments only whose last previous annual contribution exceeds the proportion specified below of the smaller sum so determined as the total contribution; and any reduction so made shall be proportionate to such excess:—

Madras	..17—90ths.
Bombay	..13—90ths.
Bengal	..19—90ths.
United Provinces	..18—90ths.
Punjab	.. 9—90ths.
Burma	..6½—90ths.
Central Provinces and Berar	.. 5—90ths
Assam	2½—20ths.

It was from the first recognised by those who took a long view of Indian finance that this arrangement could only be temporary. The allocation of revenues as between the Federal Government and the Provinces created an open sore; the Provinces never ceased to protest against contributions to the central revenues which they maintained were inequitable, and impracticable in several cases without reducing the whole standard of the administration. Moreover a superficial examination of these contributions, and their distribution as between Province and Province, seemed to indicate astounding inequities. In practice these were not as marked as they seemed, for instance although Bombay only contributed Rs. 58 lakhs a year, and Madras Rs. 348, the custodians of the Provincial finances argued that Madras was much better off than Bombay. The point put before the Statutory Commission in 1919, and thereafter pressed on the Government of India was, that there could be no peace until these contributions were abolished altogether. This view was accepted ; and as soon as funds became available the Government of India set about the work. First Bengal was excused its contribution altogether. Then in the financial year 1925-26 substantial remissions were made to all the Provinces in accordance with the principle outlined above. As they did not greatly benefit Bombay, and to a lesser extent Burma, special contributions were made to the funds of those Provinces. Then in the year 1926-27 no demands were made on the Provinces under this head. The Government of India utilised what it regarded as its permanent surplus revenue largely to reduce the contributions. Then it used its actual budget surplus in order to wipe out the balance. True, no assurance was given that this would be a permanent arrangement yet for all practical purposes it meant that the Provincial contributions as fixed under the settlements of 1919 were wiped off the slate and this was confirmed in the Budget of 1928-29.

But this did not end the discussion; indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation, which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high; wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that this does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which, it is believed, alone can put the industrial Provinces on a satisfactory basis. The question was remitted, with others, to the Parliamentary Commission which under the chairmanship of Sir John Simon is charged with the duty of inquiring into the working of the Indian constitution and making proposals for the future. In 1928 a financial expert, Mr. Leyton, was added to the Secretariat for this duty, because all the evidence went to show that the adjustment of these differences was an integral part of the working of the constitutional machine.

Railway Finance.—The year 1924-25 was marked by another step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (*q.v.*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance; a definite annual contribution from the railway revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceed the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war, it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*q. v.* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Bowing to the insistent demand for retrenchment the Government of India appointed in 1922 a

increasingly resented. But when there was a cleaner cut between the revenues of the Government of India and of the provinces occasions for interference and control were naturally fewer. It may be said that by the time of the passing of the Reform Act of 1919 a satisfactory adjustment between the financial roles of the Government of India and the Provinces had been reached and the real friction was small.

The Clean Cut.—Progress went very much further in the Reform Act of 1919. By that instrument there was made what is for all practical purposes a clean cut between Imperial and Provincial finance. The Government of India took unto itself the whole product of those taxes which experience and usage have recognised as federal rather than State, which is a better description of the relations between the Government of India and the Provinces than Imperial and Provincial. Such taxes are customs, income tax, posts and telegraphs, railways and the salt tax. It made over to the provinces, for their free and unfettered disposal, the yield of the other great taxes, such as land revenue, excise, forests, stamps, and miscellaneous heads. The full definition and dividing line drawn under this scheme will be found in the section The Government of India (*q.v.*). But when a balance sheet on these lines was drawn it was found that the Government of India was insufficiently provided with money to carry out its responsibilities. The deficiency was 983 lakhs of rupees. It was very difficult to adjust this contribution equitably amongst the provinces concerned, because under the various settlements effected there was a wide disparity between the conditions of the various provinces. Ultimately the following decision was arrived at, with machinery for the gradual extinction of the provincial contributions, if ever the Government of India was in the happy position to be able to do without the funds.

In the financial year 1921-22 contributions shall be paid to the Governor-General in Council by the local Governments mentioned below according to the following scale :—

Name of Province.	Contributions (In lakhs of rupees).
Madras	348
Bombay	58
Bengal	63
United Provinces	240
Punjab	175
Burma	64
Central Provinces and Berar ..	22
Assam	15

From the financial year 1922-23 onwards a total contribution of 983 lakhs, or such smaller sum as may be determined by the Governor General in Council, shall be paid to the Governor General in Council by the local Governments mentioned in the preceding rule. When for any year the Governor General in Council determines as the amount of the contribution a smaller sum than that payable for the preceding year, a reduction shall be made in the contribution of those local Governments only whose last previous annual contribution exceeds the proportion specified below of the smaller sum so determined as the total contribution; and any reduction so made shall be proportionate to such excess:—

Madras	..17—90ths.
Bombay	..13—90ths.
Bengal	..19—90ths.
United Provinces	..18—90ths.
Punjab	.. 9—90ths.
Burma	..6½—90ths.
Central Provinces and Berar	.. 5—90ths
Assam	2½—20ths.

It was from the first recognised by those who took a long view of Indian finance that this arrangement could only be temporary. The allocation of revenues as between the Federal Government and the Provinces created an open sore; the Provinces never ceased to protest against contributions to the central revenues which they maintained were inequitable, and impracticable in several cases without reducing the whole standard of the administration. Moreover a superficial examination of these contributions, and their distribution as between Province and Province, seemed to indicate astounding inequities. In practice these were not as marked as they seemed, for instance although Bombay only contributed Rs. 58 lakhs a year, and Madras Rs. 348, the custodians of the Provincial finances argued that Madras was much better off than Bombay. The point put before the Statutory Commission in 1919, and thereafter pressed on the Government of India was, that there could be no peace until these contributions were abolished altogether. This view was accepted ; and as soon as funds became available the Government of India set about the work. First Bengal was excused its contribution altogether. Then in the financial year 1925-26 substantial remissions were made to all the Provinces in accordance with the principle outlined above. As they did not greatly benefit Bombay, and to a lesser extent Burma, special contributions were made to the funds of those Provinces. Then in the year 1926-27 no demands were made on the Provinces under this head. The Government of India utilised what it regarded as its permanent surplus revenue largely to reduce the contributions. Then it used its actual budget surplus in order to wipe out the balance. True, no assurance was given that this would be a permanent arrangement yet for all practical purposes it meant that the Provincial contributions as fixed under the settlements of 1919 were wiped off the slate and this was confirmed in the Budget of 1928-29.

But this did not end the discussion; indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation, which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high; wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that this does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which, it is believed, alone can put the industrial Provinces on a satisfactory basis. The question was remitted, with others, to the Parliamentary Commission which under the chairmanship of Sir John Simon is charged with the duty of inquiring into the working of the Indian constitution and making proposals for the future. In 1928 a financial expert, Mr. Leyton, was added to the Secretariat for this duty, because all the evidence went to show that the adjustment of these differences was an integral part of the working of the constitutional machine.

Railway Finance.—The year 1924-25 was marked by another step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (*q.v.*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceed the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war, it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*q. v.* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Bowing to the insistent demand for retrenchment the Government of India appointed in 1922 a

retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government (Imperial Revenue and Expenditure before the Reforms) with the Revised Estimates for each year from 1914-15 to 1926-27.

In thousands of Rupees.]

---	Revenue.	Expenditure.	Surplus(+) Deficit(—)
1914-15 ..	76,15,35	78,83,14	—2,67,79
1915-16 ..	80,00,96	81,79.26	—1.78,30
1916-17 ..	98,53,10	87,31,37	+11,21.73

1926-27 ..	1,31,70,00	1,28,74.00	..2,96,00

II. THE PRESENT FINANCIAL POSITION.

Two distinctive features marked the Budget for 1928-29, and they were the close approximation of estimates to actuals in the final figures, and the remarkable degree of stability established in what had for long been the rather erratic course of Indian finance. The final accounts for the year 1926-27 showed a surplus of Rs. 2,82 lakhs. The trade record for the year 1927-28 was on the whole a steady one, and marked by a stability in prices unknown since the outbreak of the War. On the whole, the Finance Member was inclined to find evidence of a steady advance and to opine that the effects of the post-War trade depression were being dissipated. The Customs revenue was up to expectations. The taxes on income, which are a powerful factor in Indian finance, were disappointing, largely because the profits on the jute industry were below the anticipated figure. On the other hand, the contributions of the Railways to the general revenues on the scale explained earlier in this section were better. Indeed, when the balance sheet was struck it was found that the variation in the Budget almost exactly balanced themselves at the figure of Rs. 1,65 lakhs.

Capital Account.—In other respects the financial position disclosed in the Budget was eminently satisfactory. A factor which differentiates the finances of the Government of India from most other administrations is the great importance of the capital account. The Government of India has to finance the Railways and Irrigation Works, and to provide the loan funds on behalf of the Provinces. Nothing could better illustrate the growth of the financial strength of India than the comparative ease with which the Government finances a capital programme of a magnitude which would have been regarded as fantastic before the War. These transactions are shown in what are called the Ways and Means section of the Budget, and their range and importance are set out in the following statement :—

(Crores of rupees.)

Liabilities.	Revised, 1927-28.	Budget. 1928-29.
Railway Capital Outlay ..	30.0	28.0
Other capital outlay	2.3	4.4
Provincial Governments' transactions	8.0	7.0
Discharge of debt (net) ..	25.4	19.1
Miscellaneous (net)	3.0	—.2
	68.7	58.3

Resources.		
Rupee Loan (net)	18.5	32.0
Sterling loan (net)	9.1	..
Postal Cash Certificates and Savings Bank	6.7	6.6
Other unfunded debt ..	4.9	5.1
Debt redemption	5.2	5.6
Depreciation and Reserve Funds	5.8	6.8
Gain on revaluation of Securities in the Paper Currency Reserve, etc.. (net) ..	7.1	..
Reduction of cash balance ..	11.4	2.2
	68.7	58.3

One or two points in this capital programme merit comment or explanation. The rupee loan for the year yielded Rs. 18½ crores only, whilst the total amount of debt redeemed was Rs. 25.4 crores. The Finance Member confessed that perhaps in their anxiety to secure the best terms for the taxpayer, and not to disturb the rather high price for Government securities, the Government had made the terms of the loan less attractive than they should have been. In consequence, the resources of the Government had to be increased by a loan of £ 7½ millions in London, which was promptly subscribed, and a good deal of it was afterwards bought back by Indian investors through the ordinary operations of the market. Looking ahead, the Finance Member saw his way to finance the capital commitments for the year 1928-29 by a rupee loas of Rs. 32 crores, of which not more than Rs. 13 crores would be new money. The Finance Member was therefore justified in finding source of satisfaction in having financed a capital expenditure of the magnitude indicated in the Ways and Means statement in a year of rather difficult monetary conditions. Nothing could perhaps better indicate the strengthening of Indian credit than the price of Indian Government securities ; the figures are so illustrative that they are given below and they tend to justify the criticism that for a relatively undeveloped country the

price of gilt-edged securities in India is if anything too high :—

	MARKET PRICE ON.											
	1st Feb. 1923.		1st Feb. 1924.		1st Feb. 1925.		1st Feb. 1926.		1st Feb. 1927.		1st Feb. 1928.	
	Rs.	a.	Rs.	a.	Rs.	a.	Rs.	a.	Rs.	a.	Rs.	a.
5 per cent. Tax-free loan, 1945-55	88	4	96	10	97	15	100	12	107	5	106	10
3½ per cent. Indian Government rupee loan..	57	0	66	0	66	9	70	8	77	7	75	15

The following further figures compare the prices of India stock and other stock in London on certain dates. They show even more clearly than they did last year that the credit of the Government of India now stands considerably higher in the London market in relation to the British Government and other gilt-edged borrowers than it did in 1914 :—

	30th April 1914.	30th April 1923.	1st Feb. 1926.	1st Feb. 1927.	31st Dec. 1927.
India 3 per cent. loan	75¼	60¼	58	59⅜	62¾
India 3½ per cent. loan	88¼	70¼	68	70⅜	72¼
Local loans 3 per cent. stock	87	69½	64¼	63⅞	65
LONDON COUNTY COUNCIL :—					
3½ per cent. stock	97	79⅞	73	74½	73⅓
3 per cent. stock	81	68½	63	64	63¾

Budget for 1928-29.—With these preliminary remarks, we can consider the Budget for 1928-29, saying at once that it was of an unheroic and conventional character. The great constructive work was done in the earlier years of Sir Basil Blackett's tenure of office as Finance Minister, which was drawing to a close when this statement was presented ; the last Budget was therefore in the nature of a final clearing up, leaving a fairly clean sheet for his successor. The changes from normal anticipated were of a relatively minor character. They are summarised below :—

The aggregate revenue of 1928-29 was put at 132.23 crores and the expenditure at 1,29.60 crores. At this stage, therefore, we have a surplus of 2,63 lakhs. The main variations from the revised estimate for the current year may be summarised as follows :—

	(Lakhs of rupees.) Better.	Worse.
Customs	1,55	..
Taxes on Income	1,35	..
Salt	25	..
Opium (net)	..	25
Railways	..	88
Provincial contributions ..	2,58	..
Revenue Reserve Fund ..	..	1,69
Debt Services..	67	..
Civil Administration	..	41
Military Services	..	18
Other heads	..	36

Satisfaction.—The country shared the satisfaction of the Finance Department in this satement, when it recalled the extinction of the financial contributions from the Provinces, the substantial reductions in railway fares and freights, and the sacrifice of a crore of revenue under the policy of assisting the cotton textile industry. One or two special liabilities had however, to be provided for. Post Office Cash Certificates, on the lines of the English War Savings Certificates, were introduced in India in 1917 and have proved very popular, the aggregate amounting to Rs. 40 crores. Following the general practice, the interest had been treated as a revenue charge, but it is thought prudent to lay down that a special reserve must be created to meet this liability. But it was decided to treat the surplus as a recurrent balance, and to utilise to make permanent instead of temporary the balance of the contributions from the Provinces held more or less in suspense, and finally to remove these contributions, the sum in question being Rs. 2,58 lakhs. With this allocation made, the Budget left a nominal surplus of Rs. 5 lakhs. It was therefore a conventional Budget, and one of consolidation rather than the branching out into fresh fields of finance.

Reception of the Budget.—As a financial statement the Budget was generally approved, but when it was presented to the Legislature, it was received in a critical mood, from political rather than financial reasons. Certain token

cuts were carried, as an expression of disapproval of policy; certain large reductions were carried, in the full knowledge that the Governor General would restore them, and therefore they could be indulged in with the knowledge that the administration of the country would not be impaired. The most notorious of these was the rejection of the demand for the expenditure of the Secretary of State for India, on the ground that the office was unnecessary in view of the appointment of a High Commissioner. These were dealt with in a resolution from the Government of India, which sets out the final result of the discussion on the Budget.

The following reductions were made by the Legislative Assembly in the demands presented to them :—

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district as subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers; the assessments proposed by him require the sanction of the Government before they become finally binding: and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing; but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in Ryotwari tracts the *ryot* or cultivator pays the revenue direct; in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, ryotwari tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influentially signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(*a*) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (*b*) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (*c*) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above); "so far from being generously treated by the Zemindars, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to

the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information:—" Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India": Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M. Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Government.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a commonplace amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District

monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Since the issue of the report of the Excise Committee 1905-06, no less than 213,000 square miles of territory were transferred from the out-still to the distilling system. In 1905-06 39 per cent. of the total excise area and 28 per cent. of the population of that area were served by out-stills, the proportions in 1912-13 were only 15 and 8 per cent. respectively.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21. From that consumption reduced to proof gallons. 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption. The uniform fee of 8 annas per gallon is levied all over India at the time of issue.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (*q.v.*). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April, 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

The estimated opium revenue in 1928-29 is Rs. 3,47,77,000.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems. In the Punjab and Rajputana the salt manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactories are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Re. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Re. 1-4-0. The estimated salt revenue in 1928-29 is Rs. 7,00,08,000.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent., but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were re-imposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since 1894 was raised to 7½ per cent. *ad valorem*, except in the case of sugar; as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent. is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Re. 1-8-0 per 100 lbs.; in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent.; manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs. 10 per ton on sackings, and Rs. 16 per ton on Hessians; these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excise, which remained at 3½ per cent. This change was

expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 32,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent.; a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on imported liquors was raised to 5 annas per degree of proof per gallon; the *ad valorem* duty of 7½ per cent. was raised to 20 per cent. in the case of certain articles of luxury; the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1922-23. The Government proposals in this direction have been described in an early passage. They were to raise the general Customs duty from 11 to 15 per cent., the cotton excise duty from 3½ per cent. to 7½ per cent., the duty on sugar from 15 to 25 per cent., a duty of 5 per cent. on imported yarn, a rising duty on machinery, iron, steel and railway material from 2½ per cent. to 10 per cent. together with the general duty on articles of luxury from 20 per cent. to 30 per cent. In the course of the passage of the Budget through the Legislatures the cotton excise duty was retained at 3½ per cent., the duty on machinery was retained at 2½ per cent. and the duty on cotton piece-goods at 11 per cent, the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (*q. v.*). The estimated revenue from the customs in 1928-29 is Rs. 50,18,37,000.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1906. Since that date, of the five Collectorships at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (*i. e.*, "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (*a*) from members of the Indian Civil Service—3 vacancies, and (*b*) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9½d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6¼d. in the pound; on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Budget of 1922-23, when the scale was fixed as follows :—

RATES OF INCOME-TAX.

	Rate.
A. In the case of every individual, every unregistered firm and every undivided Hindu family :—	
(1) When the total income is less than Rs. 2,000.. ..	*Nil.*
(2) When the total income is Rs. 2,000 or upwards, but is less than Rs. 5,000	..Five pies in the rupee.
(3) When the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000..	..Six pies in the rupee.
(4) When the total income is Rs. 10,000 or upwards, but is less than Rs. 20,000..	..Nine pies in the rupee.
(5) When the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000..	..One anna in the rupee.
(6) When the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000..	..One anna and three pies in the rupee.
(7) When the total income is Rs. 40,000 or upwards	..One anna and six pies in the rupee.
In the case of every company, and every registered firm whatever its total income	.One anna and six pies in the rupee.

RATES OF SUPER-TAX.

In respect of the excess over fifty thousand rupees of total income:—Rate.

(1) In the case of every company .. ..One anna in the rupee.

(2) (*a*) In the case of every Hindu undivided family—

(*i*) in respect of the first twenty-five thousand rupees of the excess .. .. .. *Nil.*

(*ii*) for every rupee of the next twenty-five thousand rupees of such excess .. ..One anna in the rupee.

(*b*) In the case of every individual and every unregistered firm, for every rupee of the first fifty thousand rupees of such excess .. ..One anna in the rupee.

(*c*) In the case of every individual, every unregistered firm and every Hindu undivided family—

(*i*) for every rupee of the second fifty thousand rupees of such excess .. ..One and a half anna in the rupee.

(*ii*) for every rupee of the next fifty thousand rupees of such excess .. ..Two annas in the rupee.

(*iii*) for every rupee of the next fifty thousand rupees of such excess .. ..Two and a half annas in the rupee.

(*iv*) for every rupee of the next fifty thousand rupees of such excess .. ..Three annas in the rupee.

(*v*) for every rupee of the next fifty thousand rupees of such excess .. ..Three and a half annas in the rupee.

(*vi*) for every rupee of the next fifty thousand rupees of such excess .. ..Four annas in the rupee.

(*vii*) for every rupee of the next fifty thousand rupees of such excess .. ..Four and a half annas in the rupee.

(*viii*) for every rupee of the next fifty thousand rupees of such excess .. ..Five annas in the rupee.

(*ix*) for every rupee of the next fifty thousand rupees of such excess .. ..Five and a half annas in the rupee.

(*x*) for every rupee of the remainder of the excess ..Six annas in the rupee.

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4) "subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1928-29 is Rs. 16,99,58,000.

THE INDIAN MINTS.

The silver coinage executed for the Government of India during 1925-26 consisted of Rs. 20,59,729 of half rupees and Rs. 10,13,750 of quarter rupees coined from silver obtained from melting uncurrent coins.

Nickel and Bronze Coinage.—The coinage during 1925-26 consisted of single piece, two-anna pieces and 34,090,544 nickel one-anna pieces. Bronze coinage consisted of 90,059,400 half pice and pies pieces of the aggregate value of Rs. 6,52,970.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Exchange turned against India, and in March 1908, the Government of India offered bills on the Secretary of State up to half a million sterling, while the Secretary of State sold £1,000,000 Consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £8,058,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances, and Government offer to sell £1,000,000 of Bills weekly.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay.** It stated :—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (*a*) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (*b*) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (*c*) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and sixpence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and fivepence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the **refining of gold** by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold. The Refinery turned out 16,62,466 fine tolas of refined gold in 1920-21.

Silver.

The weight and fineness of the silver coins are :—

—	FINE SILVER grains.	ALLOY grains.	TOTAL grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Eighth of a rupee or 2-anna piece ..	20⅝	1⅞	22½

One rupee = 165 grains of fine silver.
One shilling = 80 $\frac{4}{11}$ grains of fine silver.
One rupee = shillings 2·0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows :—

	Grains troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna ..	50
Pie being one-third of a pice or one-twelfth of an anna	33⅓

The weight and dimensions of bronze coins are as follows :—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25·4
Half-pice	37½	21·15
Pie	25	17·45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19·8 millimetres. The desirability of issuing a half anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18 ; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so much importance, and they continue to bulk so largely in all Indian economic questions, than we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increasd demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and fourpence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and fourpence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and fourpence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to

about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public

opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt inconclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR.

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, £8,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917	1 4½
28th August 1917 ..	1 5
12th April 1918 ..	1 6
13th May 1919 .	1 8
12th August 1919 .	1 10
15th September 1919 ..	2 0
22nd November 1919 ..	2 2
12th December 1919 .	2 4

Purchase of Silver.—Silver for coining was purchased in large quantities, the following table showing the amount acquired by the Government of India in the last five years :—

—	In open Market (Standard Ounces).	From United States Dollar Reserve (equivalent in Standard Ounces).
1915-16	8,636,000	—
1916-17	124,535,000	—
1917-18	70,923,000	—
1918-19	106,410,000	152,518,000
1919-20 (to 30th November 1919)	14,108,000	60,875,000
Total ..	324,612,000	213,393,000

The total amount is thus 538,005,000 standard ounces.

Gold and silver were taken under control and measures taken to prevent export and melting Gold went to a premium and ceased to function as currency. The Note issue was expanded, and small Notes of one and two and a half rupees were specially prepared to economise the use of silver rupees. The nature of this expansion is shown below :—

Date.	Lakhs of Rupees.					
	Gross Note Circulation.	Composition of Reserve.				Percentage of Total Metallic Reserve to gross Note Circulation.
		Silver.	Gold.	Securities.	Total.	
31st March 1914 ..	66,12	20,53	31,59	14,00	66,12	78·9
,, 1915 ..	61,63	32,34	15,29	14,00	61,63	77·3
,, 1916 ..	67,73	23,57	24,16	20,00	67,73	70·5
,, 1917 ..	86,38	19,22	18,67	48,49	86,38	43·9
,, 1918 ..	99,79	10,79	27,52	61,48	99,79	38·4
,, 1919 ..	153,46	37,39	17,49	98,58	153,46	35·8
30th November 1919 ..	179,67	47,44	32,70	99,53	179,67	44·6

The facilities for the encashment of Notes were reduced. In these ways the Government were able to maintain the broad convertibility of the Note issue and finance the essential trades and expenditure for the Imperial Government. It often meant sailing very near to the wind, but these measures carried the country through the war.

V. THE 1919 COMMITTEE,

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below :—

(*i*) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(*ii*) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(*iii*) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(*iv*) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(*v*) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(*vi*) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(*vii*) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(*viii*) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(*ix*) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(*x*) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11·30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(*xi*) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (*a*) reduction of sale of Council Bills; (*b*) abstention from purchase of silver; (*c*) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(*xii*) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary: but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(*xiii*) The import and export of gold to and from India should be free from Government control.

(*xiv*) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(*xv*) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous: an important member of the Committee, Mr. Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses:—

(*a*) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(*b*) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(*c*) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(*d*) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secretary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) "Reverse" drafts on London to be sold only at 1s. 3 29-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 4 3-32d. per rupee.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling ; that it should be linked at the rate of two shillings instead of the standoud value, one and fourpence : all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919 ; but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue. the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued The Indian exchanges were two shillings and fourpence, and weak at that ; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange ; the market rate jumped up to two shillings eightpence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report ; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled an important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always twopence or threepence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note Issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reverse Councils before abandoning their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs. 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoratative; a resolution was passed in the Assembly hostile to the whole body. Never theless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question:—

(*i*) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(*ii*) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(*iii*) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(*iv*) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(*v*) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(*vi*) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(*vii*) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(*viii*) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(*ix*) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(*x*) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(*xi*) The legal tender quality of the sovereign and the half-sovereign should be removed.

(*xii*) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(*xiii*) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(*xiv*) One-rupee notes should be re-introduced and should be full legal tender.

(*xv*) Notes other than the one-rupee note should be legally convertible into legal tender money, *i.e.*, into notes of smaller denomination or silver rupees at the option of the currency authority.

(*xvi*) No change should be made in the legal tender character of the silver rupee.

(*xvii*) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(*xviii*) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(*xix*) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(*xx*) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(*xxi*) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(*xxii*) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(*xxiii*) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(*xxiv*) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(*xxv*) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(*xxvi*) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(*xxvii*) During the transition period the currency authority (*i.e.*, the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(*xxviii*) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1*s.* 6*d.*

(*xxix*) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(*xxx*) Measures should be taken to promote the development of banking in India.

(*xxxi*) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent.—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakordas did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were emasculated by successive Secretaries of State, who had in view something which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold, Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms :—

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1*s.* 6*d.* is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1*s.* 6*d.*, the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete the gold resources of the country to an extent that may seriously shake the confidence of her people in the currency system recommended."

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1890. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearings of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked :

What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a "limping standard." The Royal Commission declares that "in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange." Later, they show that "the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency......Under the Indian system, contraction is not, and never has been, automatic."

However, the standard limped along until the third year of the war. The exchange value of the rupee was stable ; prices adjusted themselves to the ratio ; Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages : it did not inspire public confidence ; it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it ; and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment : "when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections."

There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Babington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its "permanent" ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, "The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control."

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control, automatic working and stability; to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for a Gold Currency.—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz. bars; as soon as sufficient gold was available to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years; the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1·12 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency bills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard.—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetisation of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India; indeed the Commission do not attempt to burke it. "The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless. . . .it has been undertaken by every other country that has adopted an effective gold standard: and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify." It is important, therefore, to examine the reserves and the procedure thereanent.

The reserves held for the purpose of maintaining the value of the token currency are two-fold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows :—

Paper Currency Reserve.

	Rs. Crores.
Silver coin	77·0
Silver bullion	7·7
Gold coin and bullion	22·3
Rupee securities	57·1
Sterling securities	21·0
	185·1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee).

The Gold Standard Reserve amounts at present to £40,000,000 invested in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal; and that the holding of gold, which now stands at about 12·8 per cent., should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission, Sir Purshotamdas Thakordas being the only dissentient, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence; the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell; the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling: in October, 1924, one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit ofthe Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the Commission basetheir recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and, as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purshotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent. of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion; there would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past; it is infinitesimal in comparison with the industrial and commercial interests involved. No-one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six; the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Currency Authority.—A feature in the Indian currency system little appreciated in Great Britain is the predominance of the Government. The Commission lay special stress on the disabilities this entails. "India is perhaps the only country, among the great trading countries of the world, in which the Government exercises direct control over currency in general and over the note issue in particular. The banking and currency reserves of the country are thus separated.... The Government controls the currency. The credit situation is controlled, as far as it is controlled at all, by the Imperial Bank."

A volume might be written on this subject and on the controversy, the prejudice, and political harm which it involved. However, there is no useful purpose to be served by raking amongst these ashes, though the curious will find much food for thought in the historical retrospect, drawn entirely from official sources, which forms the first part of Sir Purushotamdas Thakordas's minute of dissent. The Commission propose to establish harmony between these hitherto diverse interests—though there has been a close working arrangement between the Government and the Imperial Bank of recent years, and the Government has developed the note issue with skill and enterprise—by the establishment of a new Reserve Bank. A detailed scheme for the constitution and working of the Bank, understood to be the handiwork of Sir Henry Strakosch, is embodied in the Report. The Reserve Bank, with a capital of five crores of rupees, is to have the sole right

of the Note Issue; the responsibility for maintaining the stability of the currency; the custody of the cash balances of the Government and the duty of carrying through its remittances; it is to act generally as a bank of the banks, and its principal function will be to re-discount bankable bills held by the commercial banks. Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits is to be paid over to the Government. In return for making over the note issue and the reserves, the Government is to nominate the managing-governor and deputy managing-governor, and three members of the Board—five members from a Board of fourteen. In order to free the Bank from political pressure, the Commission think it desirable to provide that no person shall be appointed President or Vice-President of a Local Board, or shall be nominated as a member of the Central Board, if he is a member of any of the legislatures.

The main principle underlying this recommendation is not open to question. It is of paramount importance to remove the Indian currency system from official management and to link the control of currency with the control of credit. This connotes the establishment of a Central Bank. But it is not the complete essential; far from it.

India is sometimes spoken of as the sink for the precious metals. So long as she chiefly absolved silver the West looked on with benevolent approval; now she is turning to gold the attitude is different. Indian capital is sometimes described as inadequate and timid. But critics do not realise that the banking organisation of the country is so hopelessly inadequate that hundreds of millions of people have no secure refuge for their store of value other than gold and silver bullion in their own possession. The Exchange Bank cling to the seaports. The indigenous banks follow their example. The Imperial Bank is the only organisation which can carry reliable credit facilities into the mofussil. The old Presidency Banks were lamentably slow in exercising this responsibility. The pace has been quickened, and as the price of the free use of the Government balances the Imperial Bank was called upon to open a hundred new branches. The total number of its branches is yet only a hundred and sixty-four, and it was stated by a competent banking authority in evidence before the Commission that India needed at least five thousand.

This extension of banking facilities is of transcendental importance. In an address to the University of Delhi last year Sir Basil Blackett committed himself to a remarkable statement: "To some it may sound fantastic, in view of this historic habit—reliance on external capital—to talk of India's not supplying the whole of her own capital requirements but also becoming a lender of capital for the development of other countries. Yet, I believe firmly that, given the necessary development of banking and credit facilities and goodwill and readiness to profit by the counsel and assistance of European businessmen, the time is not very far distant when India will be doing both these things. India would seem by nature to be destined to be a creditor country, if only her people will it so." But Indian resources will not be mobilised without the vehement development of branch banks.

As matters stand this work can only be done by the Imperial Bank, and though it is moving it is with desperate slowness. There are one or two features common to most of the hundred new branches it has opened. They attract deposits; they facilitate the investment habit; but they do not pay. To many who are in close touch with Indian conditions it seems that any measure which would weaken the capacity of the Imperial Bank to prosecute this unremunerative, but imperatively necessary, work by the diversion of the Government balances to the Indian Reserve Bank, or the division of these balances between the two banks, would be a retrograde measure. There are other considerations. The amount of re-discounting to be done in India is not large, as the Exchange Banks, which finance the export trade, re-discount in London, which is always likely to be the cheaper market. The number of men in India qualified to act on the directorate of banks is small. Are there enough to constitute the reliable directorates for two great banking institutions? The Commission rather gloze over these difficulties. They think that the Reserve Bank will be able to spare for the Imperial Bank sufficient funds from the Government balances to enable it to prosecute the work of opening new branches; also that a bill market will rapidly develop. But their arguments wear an aspect of special pleading. However, the issue can be put in a nutshell. India must have a Central Bank. It is found impossible to develop, even as a temporary measure, the Imperial Bank into a Central Bank, then there must be a Reserve Bank on the lines sketched in the Report. But if a new Reserve Bank is established, it is essential that provision shall be made for the Imperial Bank to enjoy the free use of a sufficient share of the Government balances to enable it vigorously to develop banking facilities in the mofussil and this obligation should be made compulsory.

The Note Issue.—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupees and another token, the note convertible into rupees. Ever since the breakway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900; it compelled heavy purchases of silver, which invariably rose in prices as the Government came into the market; and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48*d*. an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. "No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached

to them than they have ever had since silver ceased to be a reliable standard of value." Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself; it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small denomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, "and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League, with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twentyone rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence fortynine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate, but the proposal to establish a Reserve Bank for the control of Currency has not matured owing to differences between the Government and the Legislature as to the exact form of the Bank. Meantime the gold resources of the Government of India have been strengthened, as will be seen when we come to consider the Reserves.

The character of the **Reserves** which are the backbone of the Indian currency system are shown below:—

Composition of the Currency Reserve held against the note circulation at the end of each month (In lakhs of rupees.)

MONTH.	Gross circulation of notes.	Coin and Bullion Reserve.								Sterling securities in England.	Rupee securities in India.	Internal Bills of Exchange.
		Silver coin in India.	Gold coin and bullion in India.	Silver bullion under coinage.	Gold coin and bullion in England.	Silver bullion in England.	Gold coin and bullion in His Majesty's Dominions.	Gold coin and bullion in transit between India and England and His Majesty's Dominions.	Silver bullion in transit between India and England and His Majesty's Dominions.

to them than they have ever had since silver ceased to be a reliable standard of value." Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself ; it was always convertible on demand ; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small denomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, "and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option ; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League, with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect :—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twentyone rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence fortynine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate, but the proposal to establish a Reserve Bank for the control of Currency has not matured owing to differences between the Government and the Legislature as to the exact form of the Bank. Meantime the gold resources of the Government of India have been strengthened, as will be seen when we come to consider the Reserves.

The character of the **Reserves** which are the backbone of the Indian currency system are shown below :—

Composition of the Currency Reserve held against the note circulation at the end of each month (In lakhs of rupees.)

MONTH.	Coin and Bullion Reserve.											
	Gross circulation of notes.	Silver coin in India.	Gold coin and bullion in India.	Silver bullion under coinage.	Gold coin and bullion in England.	Silver bullion in England.	Gold coin and bullion in His Majesty's Dominions.	Gold coin and bullion in transit between India and England and His Majesty's Dominions.	Silver bullion in transit between India and England and His Majesty's Dominions.	Sterling securities in England.	Rupee securities in India.	Internal Bills of Exchange.

THE RESERVE BANK.

An essential part of the scheme formulated by Currency Commission was the formation of a Reserve Bank, to take over the Note Issue, custody of the Government remittances, and act as a true banker's bank. The Commission pointed out that India was one of the few great countries where the control of currency was divorced from the control of credit, and where Government carried out immense financial transactions through its own agency, and propose the Reserve Bank as the apex of the new financial system.

The Government accepted these recommendations, and in January 1927 introduced a Bill to give effect to the Commission's advice. They proposed a shareholders' bank, with a commercial directorate tempered by Government nominees, and a new agreement with the Imperial Bank freeing it from some of the restrictions imposed. The Bill was referred to a Select Committee, when a marked deivergence of opinion was manifested. A majority of the Committee carried recommendations for the transference of a shareholders' bank into a State Bank, with a strong element of directors selected by the legislatures. This changed Bill was before the legislature in September, and was withdrawn by the Government for further consideration, it being understood that the Secretary of State for India objected to the drastic changes made in the original scheme.

These objections to the original scheme have been summarised under the following heads. That a Reserve Bank in charge of the credit and currency should be responsible to the legislature; that only a State Bank would carry the confidence of the people; that a Reserve Bank does not require much capital, and therefore there was no need to create a body of shareholders; and that if a bank with share capital was created, there was the risk of it falling under the domination of foreign capitalists, or of Indian capitalists in the big cities.

The real ground of objection was the first; the legislature sought to make the Bank responsible to the legislature; that opened the great question whether the Reserve Bank should be commercial or political.

The New Bill.—After conferring with the authorities in London, the Finance Member published in January 1928 the draft of an entirely new Bill. On the main point it was uncompromising. It provided for a shareholders' bank, with a capital of five crores of rupees, and it entirely excluded political interest in the management by stipulating that members of the legislatures were precluded from becoming directors. On all other points it sought to meet the objections to the original scheme. The provisions in this respect governed the directorate and the qualifications for shareholders. As these are important they are set out here :—

The Shareholders.—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) No amount in excess of twenty thousand rupees shall be issued to any one person or to any two or more persons jointly, and no person shall be allowed to acquire an interest in the share capital of the Bank, whether held in his own right, or held jointly with others, or held partly in his own right and partly jointly with others, to a value in excess of twenty thousand rupees.

(3) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Madras, Rangoon and Delhi, and a separate issue of shares shall be made in each of the areas served by those registers, as hereinafter defined, and shares shall not be transferable from one register to another save in accordance with conditions to be prescribed by the Governor-General in Council.

(4) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register or as a holder of an interest in the share capital of a total nominal value exceeding twenty thousand rupees; and no person who is not—

(*a*) domiciled in India, or

(*b*) a British subject ordinarily resident in India, or

(*c*) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any of His Majesty's dominions and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share.

Management.—The essential clauses of the Bill relating to the management of the Bank are :—

The general superintendence of the affairs and business of the Bank shall be entrusted to a Board of Directors which may exercise all powers and do all such acts and things as may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

Save as expressly provided in this Act —(*a*) no person may be a Director who is not or has not at some time been—(*i*) actively engaged in agriculture, commerce, finance or industry, or (ii) a director of any company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or of a corporation or company incorporated by or under any law for the time being in force in any place outside British India: and (*b*) no person may be a Director who is—(i) a government official, or (ii) an officer or employee of any bank or (iii) a director of any bank, other than a registered society as defined in clause (e) of section 2 of the Co-operative Societies Act, 1912.

The election or appointment as Director of any person who is a member of the Indian Legislature or of a local Legislature shall be void, unless within one month of the date of his election or appointment he ceases to be such member, and if any Director is elected or nominated as member of any such Legislature he shall cease to be a Director as from the date of such election or nomination, as the case may be.

The Board shall consist of the following Directors, namely :—(*a*) a Governor and two Deputy Governors to be appointed by the Governor-General in Council after consideration of any recommendation made by the Board in that behalf; (*b*) four Directors to be nominated by the Governor-General in Council; (*c*) two Directors to be elected by the Associated Chambers of Commerce; (*d*) two Directors to be elected by the Federation of the Indian Chambers of Commerce; (*e*) one Director, representing the interest of agriculture to be elected by provincial co-operative banks holding shares to the nominal value of not less than five thousand rupees; (*f*) eleven Directors to be elected on behalf of the shareholders on the various registers; (*g*) one government official to be nominated by the Governor-General in Council.

The shareholders registered on the various registers shall elect delegates for the purpose of electing Directors to represent them on the Board, and the numbers of delegates shall be as follows, namely:—(*a*) for the Bombay register—twenty-four members; (*b*) for the Calcutta register—twenty-four members; (*c*) for the Madras register—ten members; (*d*) for the Rangoon register—ten members; (*e*) for the Delhi register—twenty-four members.

The election of delegates for the shareholders on a register shall be held once in every five years, at a convenient time before the expiry of the term of office of the retiring Directors for the election of whose successors the delegates are to be elected.

(5) Delegates shall hold office for a period of five years.

Reception of the Bill.—When the Bill was published many of those who were opposed to the original scheme seemed to be chary of committing themselves to an opinion. But the general attitude may be fairly indicated in these terms. By those who accepted the idea of a shareholders' bank, the Bill was regarded as a considerable improvement, inasmuch as it safeguarded the country against either alien or capitalist control, and gave every part of the country, and every important interest, representation on the directorate. Those who wanted a State, or in other terms a political bank, stood fast in their opposition, and objected the scheme root and branch. There was the further criticism that the original Bill having passed through Select Committee, and been discussed in the legislature, it was unconstitutional to withdraw it and substitute a fresh measure; the correct procedure, they maintained, was for the original Bill, as amended by the Select Committee and the legislature to be proceeded with. The Bill failed to secure the support of the Legislature and was withdrawn.

Agriculture.

As crops depend on the existence of plant food and moisture in the soil, so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree, in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months, and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons, the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. Between early June and October abundant rains fall over the greater part of the continent while the winter months are generally dry, although North-Western India benefits from showers in December and January. The south of the Peninsula, and especially the Madras Presidency, however, is more truly tropical especially in the south, and depends mainly on the N.-E. monsoon; here the two crop seasons can hardly be said to exist. The distribution of the rainfall throughout the year, which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year, *viz.*, mid-summer, and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. Heavy rainfall concentrated in a limited period, though it has its drawbacks and demands a special system of agriculture, has many advantages in hot countries.

Soils.—Four main soil types can be recognised in India, *viz.*, (1) the Red soils derived from rocks of the Archæan system which characterise Madras, Mysore and the South-East of Bombay and extend through the East of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the South of Bengal. (2) The black cotton or *regur* soils which over-lie the Deccan trap and cover the greater part of Bombay, Berar and the Western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand. The Madras *regur* soils though less typical are also important. (3) The great alluvial plains, agriculturally the most important tract in India as well as the most extensive, mainly the Indo-Gangetic Plain embracing Sind, northern Rajputana, most of the Punjab, the plains of the United Provinces, most of Bihar and Bengal and half of Assam. (4) The laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burmah.

The great alluvial plains are characterised by ease of cultivation and rapid response to irrigation and manuring; broadly speaking there are few soils in the world more suited to intensive agriculture so long as the water supply is assured. The other soils are less tractable and call for greater skill in management and are less adapted to small holdings; of these the *regur* soils are the most valuable.

Agricultural Capital and Equipment.—India is a country of small holdings and the commonest type is that which can be cultivated with one pair of bullocks under local conditions. Large holdings are practically unknown, and are mainly confined to the planting industries. Farming is carried on with a minimum of capital, there being practically no outlay on fencing, buildings, or implements. The accumulation of capital is prevented by the occurrence of famine and the high rate of interest, and extravagance of expenditure in marriage celebrations. The organization of co-operative credit which has been taken in hand by Government and which has already proved successful in many provinces will undoubtedly lead to an increase in Agricultural capital.

Equipment.—For power the ryot depends chiefly on cattle which, as a rule, are light and active but possess little hauling power. The necessary tilth for crops is brought about by frequency of ploughings, the result being that the soil is seldom tilled as it should be This is not chiefly due to want of knowledge on the part of the people but through want of proper equipment. The Indian agriculturist, as a rule, possesses an intimate though limited knowledge of the essentials of his own business, and fails, not only through ignorance, but also through lack of ways and means.

Implements are made of wood although ploughs are usually tipped with iron points, and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years and many hundred thousand are now in use. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller; and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

On black cotton soils the commonest implement is the *bakhar*, a simple form of broad-shape plough. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various sizes of hoes, the best known of which are the *kodal* or spade with a blade set at an angle towards the labourer who does not use his feet in digging, and the *khurpi* or small hand hoe. Of harvesting machinery there is none; grain is separated either by treading out with oxen or beating out by hand, and winnowing by the agency of the wind.

Cultivation.—Cultivation at its best is distinctly good but in the greater part of the country it has plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people, depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Owing to the necessity of protection against thieves, in most parts the people live in villages, many of them at considerable distances from their land. Again, holdings, small though they are, have become sub-divided by the Indian laws of inheritance without any regard for convenience, although very definite attempts are now being made by some of the Provincial Governments to remedy this evil by new legislation. For *Rabi* crops which demand a fine seed-bed preparatory tillage consists mainly of repeated treatments with the indigeneous plough (or on black soils the *Bakhar*) which serves the purpose of plough, harrow and cultivator, combined with applications of the levelling beam. Crude as these implements are they produce in Northern India a surface mulch and moist sub-soil which is the aim of all dry-farming operations. For *Kharif* crops the preparation is much less thorough as it is essential to sow without delay. Interculture is usually inadequate. Manure is generally applied to more valuable crops like sugarcane, cotton, tobacco, etc. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. On the whole the methods of the ryot if carried out thoroughly would be quite satisfactory, but it is doubtful if this could be done with the number and quality of cattle at his disposal.

Irrigation is necessary in order to grow full crops on the land, over a large part of the country owing to insufficient rainfall and the vagaries of the monsoon. Canal irrigation has been greatly extended over the Punjab, Sind, United Provinces and Madras through Government canals which, in addition to securing the crops over existing cultivated land, have converted large desert tracts into fertile areas. The Punjab and parts of the United Provinces are naturally well suited to canal irrigation owing to the frequency of their rivers. The water is generally taken off at a point a little distance from where the rivers leave the hills and is conducted to the arid plains below. The main canal splits up into diverging branches, which again subdivide up into distributaries from which the village channels receive their supplies. Water rates are levied on the matured areas of crops, Government thus bearing a part of the loss in case of failure. Much of the land is supplied by what is termed flow irrigation, *i.e.*, the land is directly commanded by the canal water, but a great deal has to be lifted from one to three feet the canal running in such cases below the level of the land. Rates for lift irrigation are, of course, lower than those for flow.

Irrigation canals are generally classed into (1) perennial and (2) inundation canals. Perennial canals, which give supplies in all seasons generally have their headworks near the hills, thus commanding a great range of country. Farther from the hills, owing to the very gradual slope of the land and the lowness of the rivers in the cold weather, perennial irrigation is difficult and inundation canals are resorted to. These canals only give irrigation when the rivers are high. As a rule, in Northern India they begin to flow when the rivers rise owing to the melting of the snow on the hills in May and dry up in September.

At the present time the Bombay Presidency possesses the most spectacular irrigation schemes in India—if not in the world. The Lloyd Dam at Bhatgar, 190 feet high, will have the greatest cubical contents of any masonry wall in the world; the Wilson Dam at Bhandardara, impounding 272 feet of water, is far and away the highest dam in India, whilst the Sukkur Barrage in Sind across the Indus will irrigate a desert whose area far exceeds that of any other scheme conceived by engineers.

Irrigation from Wells.—About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All Agricultural departments are now giving increased attention to the better utilisation of underground water supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Manures.—Although the number of cattle maintained in India is very high and indeed excessive, there is everywhere a shortage of farm-yard manure. This is partly due to the small use of bedding, for which straw can ill be spared, and to the keeping of cattle in the open but mainly to the use of dung as the principal source of village fuel. Hence the supply of organic matter to Indian soils is deficient. Unfortunately the Indian cultivator does not possess the skill of the Chinaman in the making of composts and much valuable manurial material is wasted in every Indian village and to the detriment of sanitation. Green-manure crops are spreading slowly and the use of oil-cakes, especially castor-cake, for the more valuable crops like sugarcane and tobacco is increasing.

Though much of the cultivated land in India is naturally fertile, the soil over large areas has been impoverished as a result of its being cropped year after year without manure. Various kinds of natural and artificial manures have been tested on Government farms and a small demand for them created by demonstrating their use in villages. The demand for artificial fertilizers is on the increase, and although a large portion of them goes to tea and coffee plantations, larger quantities are now being applied also to such valuable crops as sugarcane, cotton and tobacco. The chief artificial fertilisers now in use are sulphate of ammonia, nitrate of soda, and soluble phosphate fertilisers.

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, *viz.*, in Bengal, Bihar and Orissa, Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in quantity and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rices grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available, irrigation water is given at frequent intervals and the fields are kept more or less under water until the crop begins to show signs of ripening.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area, and probably three-quarters of the total outturn in India. The majority of the varieties grown belong to the species *Triticum vulgare*. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. As seen in local markets Indian wheats frequently contain appreciable quantities of other grains and even of extraneous matter due to the method of threshing employed. Wheat for export is well-cleaned and there has been great improvement in this respect of recent years. Most of the Indian wheats are soft weak wheats but there are some well known Maccaroni wheats amongst them. Indian wheat at present meets a special demand on the London market being available when other stocks of soft wheats are low. Strong wheats of high milling quality are grown on a considerable scale in Northern India as the result of the work of the Agricultural Departments but are mainly retained for local consumption. Exports of wheat during the last 30 years have varied from *zero* to over 2 million tons, most of the annual production of some 10 million tons is always consumed in the country; indeed each rise in exports has been simultaneous with the opening up of a new canal colony. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of low yield the local price is sufficiently high to restrict exports.

The Millets.—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the *great* millet, and Bajra the Bulrush millet (*Pennisetum typhoideum*). Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied though Jowar responds handsomely to high manuring and cultivation is not so thorough as for wheat. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. In the case of jowar, however, very large areas are sown as a *rabi* crop. It is often grown mixed with the summer pulses especially *Arhar* (*Cajanus indicus*—pigeon pea) and other crops. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. The produce is consumed in the country.

Pulses.—Pulses are commonly grown throughout India in great variety and form at once the backbone of the agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations, and a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are *Arhar* (*Cajanus indicus*), gram (*Cicer arietinum*), various species of *Phaseolus* and *Pisum*. Reference should be made to Groundnuts which though of modern introduction now forms an important leguminous oil-seed crop in Madras and Bombay, and to a less extent in other provinces and an important article of export.

Cotton.—Cotton is one of the most important commercial and export crops of India covering now some 28 million acres annually with a production of 5½ to 6 million bales of 400 lbs. Some two million bales are consumed annually by Indian mills, the rest being exported to Japan, China and the Continent of Europe. Some ⅔rds of the average annual production consists of short-staple cotton of ⅜″ to ¾″ staple mainly ranging round ⅝″. The remainder is medium staple cotton ranging from ⅞″ to 1⅛″. The better qualities are in keen demand for Indian mills, Punjab-American and Madras-Tinnevelly and Karunganni being the principal long-staple cottons exported. There is no Indian cotton belt; Bombay, the Central Provinces, Hyderabad, Baroda, Madras, the Punjab and the United Provinces all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly; in the

equipment. A part of the cost was met from a sum of £30,000 placed at Lord Curzon's disposal by Mr. Phipps, an American visitor to India. This example of munificence has recently been followed by Sir Sassoon J. David, who placed the sum of £53,300 at the disposal of the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods, in commemoration of the visit of Their Imperial Majesties to India.

Prior to 1921, the policy of agricultural development in India as a whole was guided by the Government of India, but with the inception of the Reforms in 1921, agriculture became a transferred subject and provincial Governments were granted autonomy in respect of the policy of agricultural development in their provinces. The Central Government, however, still concerns itself with agricultural problems of All-India importance and maintains the following institutions under the administrative control of the Agricultural Adviser to the Government of India:—(1) the Agricultural Research Institute, Pusa; (2) the Imperial Institute of Veterinary Research, Muktesar; (3) and (4) the Imperial Institutes of Animal, Husbandry and Dairying, Bangalore and Wellington; (5) the Imperial Cattle Breeding Farm, Karnal; (6) the Creamery at Anand; (7) the Imperial Cane breeding Station, Coimbatore; and (8) the Sugar Bureau, Pusa.

The Indian Central Cotton Committee with its research institutes at Bombay and Indore and its Provincial research schemes and other activities is financed from the proceeds of the cotton cess which though levied under an Act of the Central Legislature is independently administered.

The net annual expenditure of the Imperial Department of Agriculture is about Rs. 9,50,000 or about £ 70,000 while that of the Provincial Departments of Agriculture is Rs. 94,00,000 or about £ 705,000. The total net expenditure of the agricultural departments in India is therefore about £ 775,000 or about one half penny per acre per annum.

Recent Progress.—A survey of the results of the activities of the Agricultural Department—including the Central Research Institute at Pusa and the Provincial departments in relation to the chief crops of India shows valuable results. Of all the grain crops of India, rice stands first in importance and its yield is a vital factor in the welfare of the land. All Agricultural Departments have devoted considerable attention to this crop and the area under improved varieties has now reached 882,000 acres.

Wheat is the next important crop. The types evolved by the Agricultural Departments possessing high yielding and rust resisting qualities and good milling and baking properties are becoming very popular all over the land. The total area under improved wheats (Pusa and Provincial types) now exceeds 2½ million acres. Some of the new series of bearded wheats evolved at Pusa for tracts of country where the crop is liable to damage by birds possess equally satisfactory milling and baking qualities and yield as heavily as the popular Pusa wheat (12 and 4).

With a view to meeting India's requirements of refined sugar, which are greater than her production, the Agricultural Department is vigorously experimenting on high yielding canes. Some of the new varieties evolved at Coimbatore Cane Breeding Station are doing remarkably well and Coimbatore 210, 213 and 214, the demand for which far exceeds supply, have well established their superiority over the old indigenous canes. Experiments are also, with the aid of the Indian Sugar Producers' Association, being made with field and factory tests on all the more promising seedlings.

The Indian Central Cotton Committee, representative of all branches of cotton growing, manufacturing and trading interests, is co-operating with the Departments of Agriculture in the Provinces and with allied institutions, to which it has given grants-in-aid for the investigation of scientific problems relating to cotton. It has also established a Technological Laboratory, including an experimental spinning plant and research laboratory in Bombay. The laboratory will, it is hoped, prove of great value to cotton workers in furnishing accurate information regarding the spinning qualities of new strains.

The Agricultural Department have selected strains of jute which maintain their superiority over the older varieties used by the cultivators and they are rapidly spreading. The area under these strains now exceeds 500,000 acres.

The Department has been experimenting in the selection of a tobacco plant which will result in an increase in the outturn of the better qualities of Indian cigars and cigarettes and thus assist home grown tobacco better to hold its own in competition with imported cigars, tobacco and cigarettes.

Departmental investigations have meanwhile been conducted in regard to the reclamation of saline lands, the conservation of soil moisture, the movement of nitrates in the soil, the storage of farmyard manure, the efficiency of different methods of green manuring, the solubilization of mineral phosphates, the control of insect pests and diseases of crops and problems relating to animal nutrition.

Improvements are being attained by the Department in the indigenous milk breeds of cattle by better feeding and selective breeding and by crossing indigenous breeds with the famous milch breeds of Ayrshire and Holstein. Sterilised milk is now being carried over distances up to 1,000 miles and should the experiments being made in this connection prove successful it will open a new vista of possibilities for the dairy industry in India. Much attention is being paid to the question of cattle feeding. For instance, extensive trials have been made with different methods of storing silage. Public interest in dairying and cattle breeding appears to be growing throughout India.

The introduction of improved tillage implements from the West has already done much to raise the standard of farming in India and work in this direction is being pressed forward. Thousands of improved implements are now to be seen in the countryside. A great difficulty in the introduction of improved drills, mowing

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, viz., in Bengal, Bihar and Orissa, Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in quality and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rices grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available, irrigation water is given at frequent intervals and the fields are kept more or less under water until the crop begins to show signs of ripening.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area, and probably three-quarters of the total outturn in India. The majority of the varieties grown belong to the species *Triticum vulgare*. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. As seen in local markets Indian wheats frequently contain appreciable quantities of other grains and even of extraneous matter due to the method of threshing employed. Wheat for export is well-cleaned and there has been great improvement in this respect of recent years. Most of the Indian wheats are soft weak wheats but there are some well known Maccaroni wheats amongst them. Indian wheat at present meets a special demand on the London market being available when other stocks of soft wheats are low. Strong wheats of high milling quality are grown on a considerable scale in Northern India as the result of the work of the Agricultural Departments but are mainly retained for local consumption. Exports of wheat during the last 30 years have varied from *zero* to over 2 million tons, most of the annual production of some 10 million tons is always consumed in the country; indeed each rise in exports has been simultaneous with the opening up of a new canal colony. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of low yield the local price is sufficiently high to restrict exports.

The Millets.—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the *great* millet, and Bajra the Bulrush millet (*Pennisetum typhoideum*). Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied though Jowar responds handsomely to high manuring and cultivation is not so thorough as for wheat. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. In the case of jowar, however, very large areas are sown as a *rabi* crop. It is often grown mixed with the summer pulses especially *Arhar* (*Cajanus indicus*—pigeon pea) and other crops. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. The produce is consumed in the country.

Pulses.—Pulses are commonly grown throughout India in great variety and form at once the backbone of the agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations, and a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are *Arhar* (*Cajanus indicus*), gram (*Cicer arietinum*), various species of *Phaseolus* and *Pisum*. Reference should be made to Groundnuts which though of modern introduction now forms an important leguminous oil-seed crop in Madras and Bombay, and to a less extent in other provinces and an important article of export.

Cotton.—Cotton is one of the most important commercial and export crops of India covering now some 28 million acres annually with a production of 5½ to 6 million bales of 400 lbs. Some two million bales are consumed annually by Indian mills, the rest being exported to Japan, China and the Continent of Europe. Some ⅔rds of the average annual production consists of short-staple cotton of ½″ to ¾″ staple mainly ranging round ⅝″. The remainder is medium staple cotton ranging from ⅞″ to 1⅛″. The better qualities are in keen demand for Indian mills, Punjab-American and Madras-Tinnevelly and Karunganni being the principal long-staple cottons exported. There is no Indian cotton belt; Bombay, the Central Provinces, Hyderabad, Baroda, Madras, the Punjab and the United Provinces all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly; in the

best irrigated tracts the normal yield is about 200 lbs. of ginned cotton per acre and yields much above these have been recorded whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of the staple cottons has improved and also the yield and cleanliness of the short-staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act and the Bombay Cotton Markets Act have all been passed at the instance of the Committee and are doing much to check the abuse of adulteration and promote better marketing. Agricultural Departments have continued their campaign of cotton improvement and, apart from improvements in methods of cultivation, improved varieties of cotton now covers over 3½ million acres.

Exports.—The exports of raw cotton from India by sea to foreign countries in the last five cotton years (September to August) were as follows (in thousand bales of 400 lbs. each):—

Countries.	1922-23.	1923-24.	1924-25.	1925-26.	1926-27.
	Bales (1,000)	Bales (1,000)	Bales (1,000)	Bales (1,000)	Bales (1,000)
United Kingdom.	223	288	216	153	85
Germany ..	245	209	230	153	204
Belgium ..	234	257	238	210	159
France ..	130	173	180	175	112
Spain ..	62	136	60	71	53
Italy ..	309	602	482	388	272
China ..	376	243	355	521	253
Japan ..	1,759	1,384	2,101	1,995	1,582
Other Countries	135	158	136	109	110
TOTAL ..	3,473	3,450	3,998	3,775	2,830

The exports for the seven months of the season 1927-28, *i.e.*, from September 1927 to March 1928, amounted to 1,637,000 bales, as compared with 1,781,000 bales in the corresponding period of the previous year.

Sugarcane.—Although India is not naturally as well suited for sugarcane growing as many other tropical countries, some 3½ millions of acres are annually sown. The crop is mostly grown in the submontane tracts of Northern India. The common varieties are thin and hard, yielding a low percentage of juice of fair quality, but cane of the highest quality and yield is grown in South India. In India white sugar is not made by the grower who simply boils down the juice and does not remove the molasses. The product called gur or gul is generally sold and consumed as such, although in some parts a certain amount of sugar-making is carried on by the old indigenous processes. The production of sugar and *gur* by indigenous methods exceeds 3 million tons annually.* Modern sugar factories, mainly situated in Bihar and the United Provinces, produce some 90,000 tons of white sugar annually as compared to an annual import of 700,000 to 800,000 tons of white sugar. Despite a heavy protective tariff Indian sugar factories still have some difficulty in competing with the imported product, their main difficulties being the scattered nature of the cane cultivation and low yields of poor quality cane. The latter disadvantage is rapidly being reduced by the large-scale introduction of new seedling canes from the Imperial Sugarcane breeding station at Coimbatore, the best of these seedlings are very satisfactory both in tonnage and quality.

Oilseeds.—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.) Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe: The yield viries greatly from practically nothing up to 500 or 600 lbs. of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum or (Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. The seed is largely exported.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state of development. They are one of the most useful crops in the rotation. They occupy the land for a few months only, and owing to their dense growth leave the soil clean and in good condition after their removal. A number of varieties are grown differing from each other in habit of growth, time of ripening, and size and quality of seed. The best known are rape, toria, and sarson. The crop is generally sown in September or early October and harvested from December to February. The crop is subject to the attack of aphis (green fly) at the time of flowering and sometimes suffers considerable damage from this pest. The seed is subject to injury from rain and great care has to be taken in the drying. The produce is largely exported whole, but there is a considerable amount of local oil-pressing—the cake being in demand for feeding purposes.

Jute.—Two varieties of the plant are cultivated as a crop, Capsularis and Olitorius. Jute growing is confined almost entirely to Bengal, Assam, Bihar and Orissa. The crop requires a rich moist soil. Owing to river inundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once established requires no attention, and grows to a great height (10 to 11 feet). Before ripening the crop is cut and retted in water. After about three weeks submersion the fibre is removed by washing and beating. At the recent high range of prices jute may be considered to have been, for the last few years, the best paying crop in India.

Tobacco is grown here and there all over the country chiefly, however, in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated *Nicotiana Tabacum* is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of, say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. The greater part of the tobacco grown in India is intended for *Hookah* smoking and is coarse and heavy in flavour. Lighter kinds are also produced for cigar and cigarette manufacture and there is every prospect of this crop becoming increasingly important in the future as the result of successful work by the Agricultural Departments.

Live-stock consist mainly of cattle, buffaloes and goats, horses not being used for agricultural purposes. Sheep are of secondary importance.

For draught purposes cattle are in more general use than buffaloes especially in the drier parts of the country, but buffaloes are very largely used in the low lying rice tracts. For dairying buffaloes are perhaps more profitable than cows as they give richer milk and more of it: but they require more feeding. The poorer people depend largely on the milk of goats of which there are an enormous number throughout India. Cattle breeding is carried on mainly in the non-cultivated tracts in Central and Southern India, Southern Punjab and Rajputana, where distinct breeds with definite characters have been preserved. The best known draught breeds are Hansi, Nellore, Amritmehal, Gujrat, Malvi, and the finest milk cows are the Saniwal (Punjab) Gir (Kathiawar) and Sind. Owing, however, to the encroachment of cultivation on the grazing areas well-bred cattle are becoming scarce and some of the breeds are threatened with extinction. Efforts to improve the quality of the cattle in the non-breeding districts by the use of selected bulls have hitherto been frustrated by the promiscuous breeding which goes on in the villages.

The Government of India and all the Provincial Governments have now, however, turned their attention to the great problem of cattle breeding and have instituted a number of special farms where high-class stud animals are kept. In most cases these bulls are sent into villages to serve cows free on the one condition that the progeny are not allowed to deteriorate and that details of their history are given to the superintendent of the farm. Cattle-breeding, however, is naturally a very slow process and so, no appreciable improvement in the draught and milch animals of the country can be expected for many years, even though the official and non-official schemes now in operation continue to be as enthusiastically received in the villages as they are at present.

Dairying.—Though little noticed, dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghee) and cheese (dahi). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure *ghee* and milk can be procured in the villages, in the towns dairy products can scarcely be bought unadulterated. The Government of India have opened an up-to-date Creamery and Butter Factory at Anand and an Institute of Animal Husbandry and Dairying at Bangalore where students are given courses for the Indian Dairy Diploma.

AGRICULTURAL PROGRESS.

The Agricultural Departments in India as they now exist may be said to be a creation of the last twenty years. There have for a good many years past been experimental farms, under official control, in various parts of India, but they were in the past to a large extent in the hands of amateurs, and the work of the Agricultural Departments, with which all the major provinces were provided by about 1884, was in the main confined to the simplification of revenue settlement procedure and the improvement of the land records system. In 1901 the appointment of an Inspector-General of Agriculture gave the Imperial Agricultural Department for the first time an expert head, and placed the Government of India in a position to enlarge the scope of their own operations and to co-ordinate the work being done on independent lines in various provinces. At that time the staff attached to the Government of India consisted of an Agricultural Chemist and a Cryptogamic Botanist, while trained Deputy Directors of Agriculture were employed only in Madras, Bombay and the United Province and the Economic Botanist in Madras was the only provincial representative of the more specialised type of appointments. Within the next few years a number of new appointments were made, so that by March 1905 there were altogether 20 sanctioned agricultural posts; of these, seven were Imperial, including a number of specialist appointments attached to the Agricultural Research Institute and College, the establishment of which at Pusa in Bengal was sanctioned in 1903. A great impetus was given to the development of the Agricultural Departments by the decision of the Government of India in 1905 to set apart a sum of 20 lakhs (£133,000) a year for the development of agricultural experiment, research, demonstration and instruction. Their ultimate aim, as then expressed, was the establishment of an experimental farm in each large tract of country in which the agricultural conditions are approximately homogeneous, to be supplemented by numerous small demonstration farms; the creation of an agricultural college teaching up to a three years' course in each of the larger provinces: and the provision of an expert staff in connection with these colleges for purposes of research as well as education. The eventual cost, it was recognised, would largely exceed 20 lakhs a year. The Pusa Research Institute and College alone has cost nearly £150,000 including

equipment. A part of the cost was met from a sum of £30,000 placed at Lord Curzon's disposal by Mr. Phipps, an American visitor to India. This example of munificence has recently been followed by Sir Sassoon J. David, who placed the sum of £53,300 at the disposal of the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods, in commemoration of the visit of Their Imperial Majesties to India.

Prior to 1921, the policy of agricultural development in India as a whole was guided by the Government of India, but with the inception of the Reforms in 1921, agriculture became a transferred subject and provincial Governments were granted autonomy in respect of the policy of agricultural development in their provinces. The Central Government, however, still concerns itself with agricultural problems of All-India importance and maintains the following institutions under the administrative control of the Agricultural Adviser to the Government of India:—(1) the Agricultural Research Institute, Pusa; (2) the Imperial Institute of Veterinary Research, Muktesar; (3) and (4) the Imperial Institutes of Animal, Husbandry and Dairying, Bangalore and Wellington; (5) the Imperial Cattle Breeding Farm, Karnal; (6) the Creamery at Anand; (7) the Imperial Cane breeding Station, Coimbatore; and (8) the Sugar Bureau, Pusa.

The Indian Central Cotton Committee with its research institutes at Bombay and Indore and its Provincial research schemes and other activities is financed from the proceeds of the cotton cess which though levied under an Act of the Central Legislature is independently administered.

The net annual expenditure of the Imperial Department of Agriculture is about Rs. 9,50,000 or about £ 70,000 while that of the Provincial Departments of Agriculture is Rs. 94,00,000 or about £ 705,000. The total net expenditure of the agricultural departments in India is therefore about £ 775,000 or about one half penny per acre per annum.

Recent Progress.—A survey of the results of the activities of the Agricultural Department —including the Central Research Institute at Pusa and the Provincial departments in relation to the chief crops of India shows valuable results. Of all the grain crops of India, rice stands first in importance and its yield is a vital factor in the welfare of the land. All Agricultural Departments have devoted considerable attention to this crop and the area under improved varieties has now reached 882,000 acres.

Wheat is the next important crop. The types evolved by the Agricultural Departments possessing high yielding and rust resisting qualities and good milling and baking properties are becoming very popular all over the land. The total area under improved wheats (Pusa and Provincial types) now exceeds 2½ million acres. Some of the new series of bearded wheats evolved at Pusa for tracts of country where the crop is liable to damage by birds possess equally satisfactory milling and baking qualities and yield as heavily as the popular Pusa wheat (12 and 4).

With a view to meeting India's requirements of refined sugar, which are greater than her production, the Agricultural Department is vigorously experimenting on high yielding canes. Some of the new varieties evolved at Coimbatore Cane Breeding Station are doing remarkably well and Coimbatore 210, 213 and 214, the demand for which far exceeds supply, have well established their superiority over the old indigenous canes. Experiments are also, with the aid of the Indian Sugar Producers' Association, being made with field and factory tests on all the more promising seedlings.

The Indian Central Cotton Committee, representative of all branches of cotton growing, manufacturing and trading interests, is co-operating with the Departments of Agriculture in the Provinces and with allied institutions, to which it has given grants-in-aid for the investigation of scientific problems relating to cotton. It has also established a Technological Laboratory, including an experimental spinning plant and research laboratory in Bombay. The laboratory will, it is hoped, prove of great value to cotton workers in furnishing accurate information regarding the spinning qualities of new strains.

The Agricultural Department have selected strains of jute which maintain their superiority over the older varieties used by the cultivators and they are rapidly spreading. The area under these strains now exceeds 500,000 acres.

The Department has been experimenting in the selection of a tobacco plant which will result in an increase in the outturn of the better qualities of Indian cigars and cigarettes and thus assist home grown tobacco better to hold its own in competition with imported cigars, tobacco and cigarettes.

Departmental investigations have meanwhile been conducted in regard to the reclamation of saline lands, the conservation of soil moisture, the movement of nitrates in the soil, the storage of farmyard manure, the efficiency of different methods of green manuring, the solubilization of mineral phosphates, the control of insect pests and diseases of crops and problems relating to animal nutrition.

Improvements are being attained by the Department in the indigenous milk breeds of cattle by better feeding and selective breeding and by crossing indigenous breeds with the famous milch breeds of Ayrshire and Holstein. Sterilised milk is now being carried over distances up to 1,000 miles and should the experiments being made in this connection prove successful it will open a new vista of possibilities for the dairy industry in India. Much attention is being paid to the question of cattle feeding. For instance, extensive trials have been made with different methods of storing silage. Public interest in dairying and cattle breeding appears to be growing throughout India.

The introduction of improved tillage implements from the West has already done much to raise the standard of farming in India and work in this direction is being pressed forward. Thousands of improved implements are now to be seen in the countryside. A great difficulty in the introduction of improved drills, mowing

machines, fodder cutters, threshers, winnowing machines, cane mills and so on, suitable to the different needs of various parts of the country is the low purchasing power of the people and the Agricultural Departments in the Provinces have engaged the services of agricultural engineers and adopted other means to encourage and facilitate the desired progress by the invention of simpler and cheaper implements of the necessary kinds than those imported from overseas.

The past two or three years, however, have seen tremendous strides made in the popularising of modern implements and at the Bombay Presidency Agricultural Show held in Poona in October 1926, (the largest show ever held in Asia) the machinery section alone contained exhibits of farm machinery valued at many lakhs of rupees demonstrating that there is a fast increasing demand for modern implements.

THE ROYAL COMMISSION ON AGRICULTURE IN INDIA.

The Report of the Royal Commission on Agriculture in India which was appointed in April 1926 and which commenced its work in India in October of that year was published on June [illegible], 1928. The Members of the Commission were the Marquess of Linlithgow (*Chairman*), Sir Henry Lawrence, K.C.S.I., I.C.S., Sir Thomas Middleton, K.B.E., C.B., Sir Ganga Ram, C.I.E., M.V.O., Sir James MacKenna, C.I.E., I.C.S., Mr. H. Calvert, C.I.E., I.C.S., the Rajah of Parlakimedi, Professor N. N. Gangulee, Dr. L. K. Hyder and Mr. B. S. Kamat with Mr. J. A. Madan, I.C.S., and Mr. F. W. H. Smith of the India Office as Joint Secretaries. Mr. F. Noyce, C.S.I., C.B.E., I.C.S., was attached to the Commission in February, 1927. Sir Ganga Ram died in London in July, 1927.

The Commission were directed to examine and report on the existing conditions of agricultural and rural economy of British India and to make recommendations for the improvement of agriculture and to promote the welfare and prosperity of the rural population. In particular, they were directed to investigate and to make recommendations regarding the measures being taken for the promotion of agricultural and veterinary research, experiment, demonstration and education; for the compilation of agricultural statistics; for introduction of new or better crops and for improvement in agricultural practice, dairy farming and breeding of stock; the methods by which agricultural operations are financed and credit afforded to agriculturists; and the main factors affecting the rural prosperity and welfare of the agricultural population. The existing systems of land ownership and tenancy or of assessment of land revenue and irrigation charges, or the existing division of functions between the Government of India and local Governments were excluded from the scope of the Commission's investigations but they were at liberty to suggest means whereby the activities of the Governments in India might best be co-ordinated and to indicate directions in which the Government of India might usefully supplement the activities of the local Governments.

The Report of the Commission was issued in two volumes, the first containing the report proper and the second a series of introductions to the provincial volumes of evidence describing the main factors of provincial life with special relation to their agricultural aspect. Sixteen volumes of evidence taken by the Commission were also published.

Introduction.—The Report commences with an introduction giving a general picture of village life in India and a description of the obstacles to the development of agriculture in the past such as lack of communications and of internal security and famines. An account of the extent to which these obstacles have been overcome leads to a discussion of the present economic position. The Commission then explain that, though they have dealt at length throughout their Report with the problem of improving the efficiency of the agricultural departments and of extending their activities over the whole area of agricultural India, they have regarded this as merely one aspect of the far wider problem of creating an environment in which the cultivator would be willing to receive and to put to the best possible use the advice and help which the agricultural and other departments are in a position to place at his disposal. They declare that their object has been to suggest ways and means to assist the advance of the rural community to a fuller life.

Historical Retrospect.—In Chapter II the Commission give an account of the steps taken to promote agricultural improvement in India both by the Imperial and Provincial Governments previous to 1880 when the Report of Famine Commission led to the establishment of the Department of Revenue and Agriculture of the Government of India, and to the creation of provincial departments of agriculture. They proceed to describe the complete reorganisation of the Imperial and Provincial Agricultural Departments brought about by Lord Curzon in 1905 when the Pusa Research Institute was established, and the existing organisation and functions of those Departments. They dwell on the effect of the constitutional changes of 1919, as the result of which agriculture and all other departments closely connected with rural welfare, with the exception of irrigation, were transferred in all the major provinces to the Governor acting with a Minister.

Organisation of Agricultural Research.—In Chapter III, the Commission state that the most important problem with which they had been confronted was that of devising some method of infusing a different spirit into the whole organisation of agricultural research in India and of bringing about the realisation on the part of research workers in this country that they are working to an end which cannot be reached unless they regard themselves as partners in a common enterprise. They had found not only a lack of sufficiently close touch between the Pusa Research Institute and the provincial agricultural departments but also between the provincial departments themselves. After describing the way in which similar difficulties had been overcome in Canada, the United

States and Australia and dismissing as inadequate the constitution of crop committees on the model of the Indian Central Cotton Committee or the constitution of a quasi-independent governing body for Pusa on which the provincial agricultural departments and non-official interests would be represented, the Commission propose the establishment of an **Imperial Council of Agricultural Research.** The primary function of the Council would be to promote guide and co-ordinate agricultural, including veterinary, research in India and to link it with agricultural research in other parts of the British Empire and in foreign countries. It would make arrangements for the training of research workers, would act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and would take over the publication work at present carried out by the Imperial Agricultural Department. The Commission proposed that the Council should be entrusted with the administration of a non-lapsing fund of Rs. 50 lakhs to which additions should be made from time to time as financial conditions permit. Its Chairman should be an experienced administrator with a knowledge, if possible, of Indian conditions and, in addition, there should be two other whole-time members of the Council for agriculture and animal husbandry respectively. The Commission suggested that the Council should consist of thirty-six members, in addition to the Chairman and the two whole-time members. Of these, eight would be nominated by the Government of India, eighteen would represent the provincial agricultural and veterinary departments, three would represent the Indian Universities, two would represent the Indian Central Cotton Committee and the planting community respectively and five would be nominated by the Council for the approval of the Government of India. The Council would largely work through a Standing Finance Committee and sub-committees. A provincial committee should be established in each major province to work in close co-operation with it. The advisory duties of the Agricultural Adviser to the Government of India would be taken over by the Chairman and whole-time members of the Research Council, his administrative duties being taken over by a whole--time Director of the Pusa Institute. The Commission considered it essential that India should become self-contained in the matter of higher agricultural training at an early date and that the organisation of Pusa as a centre for such education should be proceeded with. They regarded it as most desirable that Indian universities should be brought into closer touch with agricultural research and held that the most important contribution which they could make in this direction was an improvement in their standard of instruction in pure science.

Except in the case of jute, the Commission held that the trade concerned should provide the funds required for any research on the product in which it is interested beyond that undertaken in the normal course by the agricultural departments. Their reason for excepting jute was the large amount derived from the export duty on raw jute and jute manufactures which give the Government of India a direct interest in the prosperity of the industry. They, therefore, suggested the establishment of a Central Jute Committee on the lines of the Indian Central Cotton Committee to deal with all problems connected with jute. The Chairman of the Agricultural Research Council would be the Chairman of this Committee which the Commission considered should be financed by an annual grant of Rs. 5 lakhs from central revenues.

The Commission suggested the retention of the Board of Agriculture, the Council of Agricultural Research being asked to advise as to any changes in its constitution which might seem calculated to promote its usefulness.

Agricultural Improvement.—In Chapter IV. the Commission dealt with such subjects as soils, manures, improved crops, distribution of seeds, agricultural implements and the prevention of pests and diseases. As regards the question whether the soils of India are to-day undergoing a progressive decline in fertility, their view was that, in an overwhelming proportion of the agricultural lands of India, a condition of stability has been reached and that no further deterioration is likely to take place in existing conditions of cultivation. They advocated much more work by the agricultural departments on soils and soil conditions and suggested the appointment of additional staff for this purpose. They did not consider that the agricultural departments are at present in a position to give the cultivator, whether of irrigated or unirrigated crops, definite advice in regard to the use of fertilisers and recommended that the existing material bearing on this point should be carefully studied and the results obtained correlated so far as the nature of the material permits. A programme of experiments with the object of ascertaining with exactitude the extent to which fertilisers can be profitably used should be formulated. The Commission were unable to suggest any alternative to the use of farmyard manure as fuel for domestic purposes where coal and wood are dear but suggested that steps should be taken to promote the better preservation of such farmyard manure as is not diverted to consumption as fuel, that the refuse of crops should be used for fuel to a far greater extent than is the case at present and that more investigation should be made into the possibilities of manufacturing synthetic farmyard manure. The use of poudrette was considered preferable to that of night soil and it was recommended that the agricultural departments should conduct experiments in the conversion of night soil into manure and arrange for demonstrations. The departments should also investigate the best methods of employing leguminous crops in increasing soil fertility and the possibility of growing crops which would supply green manure without impairing the commercial value of the crop. They should undertake experimental work to discover what green manure crops can best be included in the cultivator's rotations. The Commission were of opinion that no justification could be made out for an export tax on oil-seeds, oilcakes, bones, bone meal and fish manures or for a prohibition on their export. They held that the only method by which the

advantages of the supply of combined nitrogen available in the large crops of oil-seeds grown in India can be secured is by the natural development of the oilcrushing industry and advocated an investigation into the possibilities of an extension of the industry and also into the economics of the bone-crushing industry. They were against any further investigation under Government auspices into the possibilities of manufacturing synthetic nitrogen in India.

The Commission pointed out the great scope which still exists for further work in introducing **improved varieties of crops** in India, especially in regard to millets, pulses and oil-seeds. They held that, of the methods of obtaining varieties superior to those ordinarily grown, selection is the one which still, in general, offers the greatest possibilities in Indian conditions. Hybridisation should only be undertaken by officers who, in addition to special training have had experience of Indian crops and conditions.

Experiments in the introduction of new crops should continue but work on exotics should, in no circumstances, take precedence of work on crops already grown in India. No new varieties should be put out until they have been thoroughly tested in the conditions under which they would be grown by the cultivator and it has been thoroughly well established that they possess marked advantages over those already grown.

The Commission held that, though seed merchants of proved integrity and enterprise should be encouraged by the agricultural departments, for a very long time to come **seed distribution** must continue to form one of the most important branches of the work of the agricultural departments. Co-operative agency appeared to offer the best prospects of assistance to the departments in their work but use might also be made of private seed agents. A considerable increase in the number of seed farms was desirable. A separate organisation within the agricultural departments for seed distribution and seed testing was recommended, this organisation to be in charge of a Deputy Director working under the Director of Agriculture. Though continued research on rotation and methods of tillage were required, the Commission held that the more important problem in regard to methods of tillage was that of bringing home to the cultivator knowledge already available.

The Commission did not consider that the agricultural departments had made the fullest use of the opportunities which had presented themselves in regard to the introduction of **improved implements**. The main reasons for this were that agricultural engineering had been regarded as a secondary sphere of departmental activity and that work on implements had in several provinces, been entirely overshadowed by that connected with pumping and boring operations. The Commission, therefore, recommended a complete reorganisaion of the agricultural engineering sections of the agricultural departments which should, in all respects, be integral parts of the departments. They held that the aim of the agricultural departments should be the evolution of a small number of types of implements and machinery suitable for a wide range of conditions and suitable also for mass production. Investigation into the relation of the capacity of the draught cattle of India to the implements they are required to draw was also suggested.

As regards **pests and diseases**, the Commission did not consider any modification of the rules framed under the Destructive Insects and Pests Act was called for. They suggested legislation on the lines of the Madras Agricultural Pests and Diseases Act for other provinces and also to prevent the importation of pests and diseases from India into Burma. The strengthening of the Imperial and Provincial entomological and mycological staff in certain respects was recommended as was the grant of gun licenses on a more liberal scale in order to deal with the damage done to crops and cattle by wild animals.

Subdivision and Fragmentation of Holdings.—In Chapter V, the Commission discussed one of the greatest obstacles to agricultural improvement in India, that presented by the smallness of holdings resulting from subdivision, which is chiefly due to the laws of inheritance customary amongst Hindus and Muhammadans which enjoin a succession to immovable property amongst all the heirs usually in equal shares, and fragmentation which is due, in the main, to the way in which the division of property is effected. The Commission pointed out that subdivision had been retarded where restrictions on the alienation of land had been imposed but that no other suggestion had been put forward for the prevention of further subdivision without interfering with the laws of inheritance. The only measure that appeared to promise relief from the evils arising from the fragmentation of holdings was the process known as consolidation of holdings. Some very striking results on these lines had been achieved on a voluntary basis in the Punjab through the agency of the Co-operative Department, and, in several provinces, opinion in favour of action on similar lines had manifested itself. The Commission held that the initiative must come from the State which should undertake propaganda work, explore the actual situation and bear the cost in the early stages. They laid down the principles which should be embodied in any legislation designed to promote consolidation.

Demonstration and Propaganda. In Chapter VI, the Commission discussed the best means of bringing improved methods of agriculture to the notice of the cultivator. They suggested that the several methods of propaganda employed, their relative cost and the claim of each on the time of the staff, should be frequently reviewed in the light of recorded results and that any method proved ineffective should be abandoned. In their view, the only hope of convining the cultivating classes of the advantage of agricultural improvement lay in ocular demonstration. Demonstration on the cultivator's own fields was preferable to that on a Government demonstration farm in view of the ineradicable suspicion by the cultivator of the results obtained on the latter. There was, however, no objection to the establishment of special demonstration farms for demonstrations involving industrial as well as agricultura operations.

Experimental farms were unsuitable for demonstration work and should be confined to the purpose for which they were intended. Departmental seed farms, on the other hand, could be used with advantage for such work. Demonstration farms, established to demonstrate the possibilities of capitalistic farming, should be run at a profit and seed farms should be at least self-supporting. Short courses in particular subjects should form an important part of the work of demonstration and seed farms. The two systems of carrying out demonstrations on the cultivator's own fields, that under which a plot is hired and the cultivation is carried on throughout by the departmental staff and that under which the land is cultivated by the cultivator himself under departmental supervision, should be adopted in all provinces and the results compared.

The Commission suggested peripatetic demonstrations of the use of improved implements and also suitable arrangements by agricultural departments or by manufacturers in consultation with them for hiring out the more expensive implements and machinery.

They considered agricultural shows a useful means of following up the demonstration work of the agricultural departments and recommended the establishment of permanent agricultural stalls in regulated markets.

The various **publications issued by the agricultural departments** were held to serve a useful purpose in stimulating general interest in the work of the departments but the vernacular leaflets, which are now issued in large numbers, were of little value unless issued in connection with a definite demonstration of their subject matter, as were other forms of propaganda such as lectures, the cinema and wireless. The Commission recommended that the agricultural departments should consider the advisability of undertaking the production of films as also the possibilities of demonstration trains as organised recently in Bengal and the Punjab.

The Commission pointed out that **agricultural associations** had, for various reasons, proved a failure in most provinces and that the agricultural departments had not been successful in exploiting the possibilities offered by the co-operative movement for propaganda. They suggested that the divisional boards and taluka development associations in the Bombay Presidency constituted an organisation for the coordination of the propaganda work of the agricultural and co-operative departments which was worthy of study by other provincial governments. Far greater use should be made of cooperative societies in propaganda work.

The Commission recommended the concentration of demonstration and propaganda work both in regard to the area of operation and the subjects selected for demonstration. They recommended the appointment to the office of the Director of Agriculture of an officer whose sole duty it would be to organise and systematise propaganda work throughout a province. They held that the propaganda work of departments concerned with rural development, other than the agricultural and veterinary departments, was best carried on through associations organised for general purposes and through co-operative bodies.

An annual prize awarded by the Government of India for the most striking agricultural improvement of the year was suggested as a valuable stimulus to agricultural development.

Animal Husbandry.—Chapter VII of the Report is the most valuable contribution to the solution of the various problems connected with the improvement of cattle in India that has yet been published.

The Chapter commences with a brief reference to sheep and goat breeding. The Commission held that, in this direction, the main energies of livestock experts should be concentrated on a study of the best Indian types and the building up, by selection, of a flock of ewes or she goats with definite characteristics before any modification of characteristics by crossing is decided on.

The Commission emphasized the extent to which the prosperity of Indian agriculture is linked with the improvement of livestock, and stated that the four cardinal points in a policy of improvement must be :—

(a) attention to all matters that would tend to decrease the number of bullocks required for cultivation ;

(b) an effort to secure better treatment for dry cows and cows in-calf ;

(c) a reduction in the number of plough cattle ; and,

(d) an increase in the efficiency of plough cattle.

They held that, in nearly every part of India, the common grazing lands and all grass lands close to villages were hopelessly overstocked but that, nevertheless, where their treatment was good, many fine cattle belonging to a number of well recognised breeds were to be found. No large additions to grazing grounds are, however, possible and efforts should, therefore, be concentrated on increasing the productivity of the land already growing grass. The Commission considered that the scope for such efforts was great and suggested various ways in which the productivity of the existing grazing grounds could be increased, *e.g.*, by regulation and the establishment of rotational grazing. They recommended that the importance of cutting and storing dry grass in default of hay and of making hay, wherever conditions permitted, should be impressed on the cultivator. They considered that there were great possibilities for silage but that there were practical difficulties in persuading the cultivator to adopt it. The immediate policy should be to concentrate on efforts to get the cultivator to make silage for his cows and young stock from recognised fodders and inferior grasses which experiments have shown to be suitable for this purpose. Even, however, when all possible use has been made of existing sources of supply, a shortage of fodder is likely to arise in many parts of India. The Commission held that the cultivation of fodder on the cultivator's holding was the only remedy for this. They drew attention to the great possibilities of Egyptian cover, especially if its seed could be produced cheaply and on a commercial scale in India and suggested the encouragement of the cultivation of leguminous fodder crops by

advantage of the supply of combined nitrogen available in the large crops of oil-seeds grown in India can be secured is by the natural development of the oil-crushing industry and advocated an investigation into the possibilities of an extension of the industry and also into the economics of the bone-crushing industry. They were against any further investigation under Government auspices into the possibilities of manufacturing synthetic nitrogen in India.

The Commission pointed out the great scope which still exists for further work in introducing **improved varieties of crops** in India, especially in regard to millets, pulses and oil-seeds. They held that, of the methods of obtaining varities superior to those ordinarily grown, selection is the one which still, in general, offers the greatest possibilities in Indian conditions. Hybridisation should only be undertaken by officers who, in addition to special training have had experience of Indian crops and conditions.

Experiments in the introduction of new crops should continue but work on exotics should, in no circumstances, take precedence of work on crops already grown in India. No new varieties should be put out until they have been thoroughly tested in the conditions under which they would be grown by the cultivator and it has been thoroughly well established that they possess marked advantages over those already grown.

The Commission held that, though seed merchants of proved integrity and enterprise should be encouraged by the agricultural departments, for a very long time to come **seed distribution** must continue to form one of the most important branches of the work of the agricultural departments. Co-operative agency appeared to offer the best prospects of assistance to the departments in their work but use might also be made of private seed agents. A considerable increase in the number of seed farms was desirable. A separate organisation within the agricultural departments for seed distribution and seed testing was recommended, this organisation to be in charge of a Deputy Director working under the Director of Agriculture. Though continued research on rotation and methods of tillage were required, the Commission held that the more important problem in regard to methods of tillage was that of bringing home to the cultivator knowledge already available.

The Commission did not consider that the agricultural departments had made the fullest use of the opportunities which had presented themselves in regard to the introduction of **improved implements**. The main reasons for this were that agricultural engineering had been regarded as a secondary sphere of departmental activity and that work on implements had in several provinces, been entirely overshadowed by that connected with pumping and boring operations. The Commission, therefore, recommended a complete reorganisaion of the agricultural engineering sections of the agricultural departments which should, in all respects, be integral parts of the departments. They held that the aim of the agricultural departments should be the evolution of a small number of types of implements and machinery suitable for a wide range of conditions and suitable also for mass production. Investigation into the relation of the capacity of the draught cattle of India to the implements they are required to draw was also suggested.

As regards **pests and diseases**, the Commission did not consider any modification of the rules framed under the Destructive Insects and Pests Act was called for. They suggested legislation on the lines of the Madras Agricultural Pests and Diseases Act for other provinces and also to prevent the importation of pests and diseases from India into Burma. The strengthening of the Imperial and Provincial entomological and mycological staff in certain respects was recommended as was the grant of gun licenses on a more liberal scale in order to deal with the damage done to crops and cattle by wild animals.

Subdivision and Fragmentation of Holdings.—In Chapter V, the Commission discussed one of the greatest obstacles to agricultural improvement in India, that presented by the smallness of holdings resulting from subdivision, which is chiefly due to the laws of inheritance customary amongst Hindus and Muhammadans which enjoin a succession to immovable property amongst all the heirs usually in equal shares, and fragmentation which is due, in the main, to the way in which the division of property is effected. The Commission pointed out that subdivision had been retarded where restrictions on the alienation of land had been imposed but that no other suggestion had been put forward for the prevention of further subdivision without interfering with the laws of inheritance. The only measure that appeared to promise relief from the evils arising from the fragmentation of holdings was the process known as consolidation of holdings. Some very striking results on these lines had been achieved on a voluntary basis in the Punjab through the agency of the Co-operative Department, and, in several provinces, opinion in favour of action on similar lines had manifested itself. The Commission held that the initiative must come from the State which should undertake propaganda work, explore the actual situation and bear the cost in the early stages. They laid down the principles which should be embodied in any legislation designed to promote consolidation.

Demonstration and Propaganda. In Chapter VI, the Commission discussed the best means of bringing improved methods of agriculture to the notice of the cultivator. They suggested that the several methods of propaganda employed, their relative cost and the claim of each on the time of the staff, should be frequently reviewed in the light of recorded results and that any method proved ineffective should be abandoned. In their view, the only hope of convincing the cultivating classes of the advantage of agricultural improvement lay in ocular demonstration. Demonstration on the cultivator's own fields was preferable to that on a Government demonstration farm in view of the ineradicable suspicion by the cultivator of the results obtained on the latter. There was, however, no objection to the establishment of special demonstration farms for demonstrations involving industrial as well as agricultura operations.

Experimental farms were unsuitable for demonstration work and should be confined to the purpose for which they were intended. Departmental seed farms, on the other hand, could be used with advantage for such work. Demonstration farms, established to demonstrate the possibilities of capitalistic farming, should be run at a profit and seed farms should be at least self-supporting. Short courses in particular subjects should form an important part of the work of demonstration and seed farms. The two systems of carrying out demonstrations on the cultivator's own fields, that under which a plot is hired and the cultivation is carried on throughout by the departmental staff and that under which the land is cultivated by the cultivator himself under departmental supervision, should be adopted in all provinces and the results compared.

The Commission suggested peripatetic demonstrations of the use of improved implements and also suitable arrangements by agricultural departments or by manufacturers in consultation with them for hiring out the more expensive implements and machinery.

They considered agricultural shows a useful means of following up the demonstration work of the agricultural departments and recommended the establishment of permanent agricultural stalls in regulated markets.

The various **publications issued by the agricultural departments** were held to serve a useful purpose in stimulating general interest in the work of the departments but the vernacular leaflets, which are now issued in large numbers, were of little value unless issued in connection with a definite demonstration of their subject matter, as were other forms of propaganda such as lectures, the cinema and wireless. The Commission recommended that the agricultural departments should consider the advisability of undertaking the production of films as also the possibilities of demonstration trains as organised recently in Bengal and the Punjab.

The Commission pointed out that **agricultural associations** had, for various reasons, proved a failure in most provinces and that the agricultural departments had not been successful in exploiting the possibilities offered by the co-operative movement for propaganda. They suggested that the divisional boards and taluka development associations in the Bombay Presidency constituted an organisation for the coordination of the propaganda work of the agricultural and co-operative departments which was worthy of study by other provincial governments. Far greater use should be made of cooperative societies in propaganda work.

The Commission recommended the concentration of demonstration and propaganda work both in regard to the area of operation and the subjects selected for demonstration. They recommended the appointment to the office of the Director of Agriculture of an officer whose sole duty it would be to organise and systematise propaganda work throughout a province. They held that the propaganda work of departments concerned with rural development, other than the agricultural and veterinary departments, was best carried on through associations organised for general purposes and through co-operative bodies.

An annual prize awarded by the Government of India for the most striking agricultural improvement of the year was suggested as a valuable stimulus to agricultural development.

Animal Husbandry.—Chapter VII of the Report is the most valuable contribution to the solution of the various problems connected with the improvement of cattle in India that has yet been published.

The Chapter commences with a brief reference to sheep and goat breeding. The Commission held that, in this direction, the main energies of livestock experts should be concentrated on a study of the best Indian types and the building up, by selection, of a flock of ewes or she goats with definite characteristics before any modification of characteristics by crossing is decided on.

The Commission emphasized the extent to which the prosperity of Indian agriculture is linked with the improvement of livestock, and stated that the four cardinal points in a policy of improvement must be :—

(a) attention to all matters that would tend to decrease the number of bullocks required for cultivation ;

(b) an effort to secure better treatment for dry cows and cows in-calf ;

(c) a reduction in the number of plough cattle ; and,

(d) an increase in the efficiency of plough cattle.

They held that, in nearly every part of India, the common grazing lands and all grass lands close to villages were hopelessly overstocked but that, nevertheless, where their treatment was good, many fine cattle belonging to a number of well recognised breeds were to be found. No large additions to grazing grounds are, however, possible and efforts should, therefore, be concentrated on increasing the productivity of the land already growing grass. Even, however, when all possible use has been made of existing sources of supply, a shortage of fodder is likely to arise in many parts of India. The Commission held that the cultivation of fodder on the cultivator's holding was the only remedy for this. They drew attention to the great possibilities of Egyptian cover, especially if its seed could be produced cheaply and on a commercial scale in India and suggested the encouragement of the cultivation of leguminous fodder crops by

advantages of the supply of combined nitrogen available in the large crops of oil-seeds grown in India can be secured is by the natural development of the oilcrushing industry and advocated an investigation into the possibilities of an extension of the industry and also into the economics of the bone-crushing industry. They were against any further investigation under Government auspices into the possibilities of manufacturing synthetic nitrogen in India.

The Commission pointed out the great scope which still exists for further work in introducing **improved varieties of crops** in India, especially in regard to millets, pulses and oil-seeds. They held that, of the methods of obtaining varieties superior to those ordinarily grown, selection is the one which still, in general, offers the greatest possibilities in Indian conditions. Hybridisation should only be undertaken by officers who, in addition to special training have had experience of Indian crops and conditions.

Experiments in the introduction of new crops should continue but work on exotics should, in no circumstances, take precedence of work on crops already grown in India. No new varieties should be put out until they have been thoroughly tested in the conditions under which they would be grown by the cultivator and it has been thoroughly well established that they possess marked advantages over those already grown.

The Commission held that, though seed merchants of proved integrity and enterprise should be encouraged by the agricultural departments, for a very long time to come **seed distribution** must continue to form one of the most important branches of the work of the agricultural departments. Co-operative agency appeared to offer the best prospects of assistance to the departments in their work but use might also be made of private seed agents. A considerable increase in the number of seed farms was desirable. A separate organisation within the agricultural departments for seed distribution and seed testing was recommended, this organisation to be in charge of a Deputy Director working under the Director of Agriculture. Though continued research on rotation and methods of tillage were required, the Commission held that the more important problem in regard to methods of tillage was that of bringing home to the cultivator knowledge already available.

The Commission did not consider that the agricultural departments had made the fullest use of the opportunities which had presented themselves in regard to the introduction of **improved implements**. The main reasons for this were that agricultural engineering had been regarded as a secondary sphere of departmental activity and that work on implements had in several provinces, been entirely overshadowed by that connected with pumping and boring operations. The Commission, therefore, recommended a complete reorganisaion of the agricultural engineering sections of the agricultural departments which should, in all respects, be integral parts of the departments. They held that the aim of the agricultural departments should be the evolution of a small number of types of implements and machinery suitable for a wide range of conditions and suitable also for mass production. Investigation into the relation of the capacity of the draught cattle of India to the implements they are required to draw was also suggested.

As regards **pests and diseases**, the Commission did not consider any modification of the rules framed under the Destructive Insects and Pests Act was called for. They suggested legislation on the lines of the Madras Agricultural Pests and Diseases Act for other provinces and also to prevent the importation of pests and diseases from India into Burma. The strengthening of the Imperial and Provincial entomological and mycological staff in certain respects was recommended as was the grant of gun licenses on a more liberal scale in order to deal with the damage done to crops and cattle by wild animals.

Subdivision and Fragmentation of Holdings.—In Chapter V, the Commission discussed one of the greatest obstacles to agricultural improvement in India, that presented by the smallness of holdings resulting from subdivision, which is chiefly due to the laws of inheritance customary amongst Hindus and Muhammadans which enjoin a succession to immovable property amongst all the heirs usually in equal shares, and fragmentation which is due, in the main, to the way in which the division of property is effected. The Commission pointed out that subdivision had been retarded where restrictions on the alienation of land had been imposed but that no other suggestion had been put forward for the prevention of further subdivision without interfering with the laws of inheritance. The only measure that appeared to promise relief from the evils arising from the fragmentation of holdings was the process known as consolidation of holdings. Some very striking results on these lines had been achieved on a voluntary basis in the Punjab through the agency of the Co-operative Department, and, in several provinces, opinion in favour of action on similar lines had manifested itself. The Commission held that the initiative must come from the State which should undertake propaganda work, explore the actual situation and bear the cost in the early stages. They laid down the principles which should be embodied in any legislation designed to promote consolidation.

Demonstration and Propaganda. In Chapter VI, the Commission discussed the best means of bringing improved methods of agriculture to the notice of the cultivator. They suggested that the several methods of propaganda employed, their relative cost and the claim of each on the time of the staff, should be frequently reviewed in the light of recorded results and that any method proved ineffective should be abandoned. In their view, the only hope of convining the cultivating classes of the advantage of agricultural improvement lay in ocular demonstration. Demonstration on the cultivator's own fields was preferable to that on a Government demonstration farm in view of the ineradicable suspicion by the cultivator of the results obtained on the latter. There was, however, no objection to the establishment of special demonstration farms for demonstrations involving industrial as well as agricultura operations.

Experimental farms were unsuitable for demonstration work and should be confined to the purpose for which they were intended. Departmental seed farms, on the other hand, could be used with advantage for such work. Demonstration farms, established to demonstrate the possibilities of capitalistic farming, should be run at a profit and seed farms should be at least self-supporting. Short courses in particular subjects should form an important part of the work of demonstration and seed farms. The two systems of carrying out demonstrations on the cultivator's own fields, that under which a plot is hired and the cultivation is carried on throughout by the departmental staff and that under which the land is cultivated by the cultivator himself under departmental supervision, should be adopted in all provinces and the results compared.

The Commission suggested peripatetic demonstrations of the use of improved implements and also suitable arrangements by agricultural departments or by manufacturers in consultation with them for hiring out the more expensive implements and machinery.

They considered agricultural shows a useful means of following up the demonstration work of the agricultural departments and recommended the establishment of permanent agricultural stalls in regulated markets.

The various **publications issued by the agricultural departments** were held to serve a useful purpose in stimulating general interest in the work of the departments but the vernacular leaflets, which are now issued in large numbers, were of little value unless issued in connection with a definite demonstration of their subject matter, as were other forms of propaganda such as lectures, the cinema and wireless. The Commission recommended that the agricultural departments should consider the advisability of undertaking the production of films as also the possibilities of demonstration trains as organised recently in Bengal and the Punjab.

The Commission pointed out that **agricultural associations** had, for various reasons, proved a failure in most provinces and that the agricultural departments had not been successful in exploiting the possibilities offered by the co-operative movement for propaganda. They suggested that the divisional boards and taluka development associations in the Bombay Presidency constituted an organisation for the co-ordination of the propaganda work of the agricultural and co-operative departments which was worthy of study by other provincial governments. Far greater use should be made of co-operative societies in propaganda work.

The Commission recommended the concentration of demonstration and propaganda work both in regard to the area of operation and the subjects selected for demonstration. They recommended the appointment to the office of the Director of Agriculture of an officer whose sole duty it would be to organise and systematise propaganda work throughout a province. They held that the propaganda work of departments concerned with rural development, other than the agricultural and veterinary departments, was best carried on through associations organised for general purposes and through co-operative bodies.

An annual prize awarded by the Government of India for the most striking agricultural improvement of the year was suggested as a valuable stimulus to agricultural development.

Animal Husbandry.—Chapter VII of the Report is the most valuable contribution to the solution of the various problems connected with the improvement of cattle in India that has yet been published.

The Chapter commences with a brief reference to sheep and goat breeding. The Commission held that, in this direction, the main energies of livestock experts should be concentrated on a study of the best Indian types and the building up, by selection, of a flock of ewes or she goats with definite characteristics before any modification of characteristics by crossing is decided on.

The Commission emphasized the extent to which the prosperity of Indian agriculture is linked with the improvement of livestock, and stated that the four cardinal points in a policy of improvement must be :—

(a) attention to all matters that would tend to decrease the number of bullocks required for cultivation;

(b) an effort to secure better treatment for dry cows and cows in-calf;

(c) a reduction in the number of plough cattle; and,

(d) an increase in the efficiency of plough cattle.

They held that, in nearly every part of India, the common grazing lands and all grass lands close to villages were hopelessly overstocked but that, nevertheless, where their treatment was good, many fine cattle belonging to a number of well recognised breeds were to be found. No large additions to grazing grounds are, however, possible and efforts should, therefore, be concentrated on increasing the productivity of the land already growing grass. The Commission considered that the scope for such efforts was great and suggested various ways in which the productivity of the existing grazing grounds could be increased, *e.g.*, by regulation and the establishment of rotational grazing. They recommended that the importance of cutting and storing dry grass in default of hay and of making hay, wherever conditions permitted, should be impressed on the cultivator. They considered that there were great possibilities for silage but that there were practical difficulties in persuading the cultivator to adopt it. The immediate policy should be to concentrate on efforts to get the cultivator to make silage for his cows and young stock from recognised fodders and inferior grasses which experiments have shown to be suitable for this purpose. Even, however, when all possible use has been made of existing sources of supply, a shortage of fodder is likely to arise in many parts of India. The Commission held that the cultivation of fodder on the cultivator's holding was the only remedy for this. They drew attention to the great possibilities of Egyptian cover, especially if its seed could be produced cheaply and on a commercial scale in India and suggested the encouragement of the cultivation of leguminous fodder crops by

advantages of the supply of combined nitrogen available in the large crops of oil-seeds grown in India can be secured is by the natural development of the oilcrushing industry and advocated an investigation into the possibilities of an extension of the industry and also into the economics of the bone-crushing industry. They were against any further investigation under Government auspices into the possibilities of manufacturing synthetic nitrogen in India.

The Commission pointed out the great scope which still exists for further work in introducing **improved varieties of crops** in India, especially in regard to millets, pulses and oil-seeds. They held that, of the methods of obtaining varilties superior to those ordinarily grown, selection is the one which still, in general, offers the greatest possibilities in Indian conditions. Hybridisation should only be undertaken by officers who, in addition to special training have had experience of Indian crops and conditions.

Experiments in the introduction of new crops should continue but work on exotics should, in no circumstances, take precedence of work on crops already grown in India. No new varieties should be put out until they have been thoroughly tested in the conditions under which they would be grown by the cultivator and it has been thoroughly well established that they possess marked advantages over those already grown.

The Commission held that, though seed merchants of proved integrity and enterprise should be encouraged by the agricultural departments, for a very long time to come **seed distribution** must continue to form one of the most important branches of the work of the agricultural departments. Co-operative agency appeared to offer the best prospects of assistance to the departments in their work but use might also be made of private seed agents. A considerable increase in the number of seed farms was desirable. A separate organisation within the agricultural departments for seed distribution and seed testing was recommended, this organisation to be in charge of a Deputy Director working under the Director of Agriculture. Though continued research on rotation and methods of tillage were required, the Commission held that the more important problem in regard to methods of tillage was that of bringing home to the cultivator knowledge already available.

The Commission did not consider that the agricultural departments had made the fullest use of the opportunities which had presented themselves in regard to the introduction of **improved implements**. The main reasons for this were that agricultural engineering had been regarded as a secondary sphere of departmental activity and that work on implements had in several provinces, been entirely overshadowed by that connected with pumping and boring operations. The Commission, therefore, recommended a complete reorganisaion of the agricultural engineering sections of the agricultural departments which should, in all respects, be integral parts of the departments. They held that the aim of the agricultural departments should be the evolution of a small number of types of implements and machinery suitable for a wide range of conditions and suitable also for mass production. Investigation into the relation of the capacity of the draught cattle of India to the implements they are required to draw was also suggested.

As regards **pests and diseases**, the Commission did not consider any modification of the rules framed under the Destructive Insects and Pests Act was called for. They suggested legislation on the lines of the Madras Agricultural Pests and Diseases Act for other provinces and also to prevent the importation of pests and diseases from India into Burma. The strengthening of the Imperial and Provincial entomological and mycological staff in certain respects was recommended as was the grant of gun licenses on a more liberal scale in order to deal with the damage done to crops and cattle by wild animals.

Subdivision and Fragmentation of Holdings.—In Chapter V, the Commission discussed one of the greatest obstacles to agricultural improvement in India, that presented by the smallness of holdings resulting from subdivision, which is chiefly due to the laws of inheritance customary amongst Hindus and Muhammadans which enjoin a succession to immovable property amongst all the heirs usually in equal shares, and fragmentation which is due, in the main, to the way in which the division of property is effected. The Commission pointed out that subdivision had been retarded where restrictions on the alienation of land had been imposed but that no other suggestion had been put forward for the prevention of further subdivision without interfering with the laws of inheritance. The only measure that appeared to promise relief from the evils arising from the fragmentation of holdings was the process known as consolidation of holdings. Some very striking results on these lines had been achieved on a voluntary basis in the Punjab through the agency of the Co-operative Department, and, in several provinces, opinion in favour of action on similar lines had manifested itself. The Commission held that the initiative must come from the State which should undertake propaganda work, explore the actual situation and bear the cost in the early stages. They laid down the principles which should be embodied in any legislation designed to promote consolidation.

Demonstration and Propaganda. In Chapter VI, the Commission discussed the best means of bringing improved methods of agriculture to the notice of the cultivator. They suggested that the several methods of propaganda employed, their relative cost and the claim of each on the time of the staff, should be frequently reviewed in the light of recorded results and that any method proved ineffective should be abandoned. In their view, the only hope of convining the cultivating classes of the advantage of agricultural improvement lay in ocular demonstration. Demonstration on the cultivator's own fields was preferable to that on a Government demonstration farm in view of the ineradicable suspicion by the cultivator of the results obtained on the latter. There was, however, no objection to the establishment of special demonstration farms for demonstrations involving industrial as well as agricultura operations.

Experimental farms were unsuitable for demonstration work and should be confined to the purpose for which they were intended. Departmental seed farms, on the other hand, could be used with advantage for such work. Demonstration farms, established to demonstrate the possibilities of capitalistic farming, should be run at a profit and seed farms should be at least self-supporting. Short courses in particular subjects should form an important part of the work of demonstration and seed farms. The two systems of carrying out demonstrations on the cultivator's own fields, that under which a plot is hired and the cultivation is carried on throughout by the departmental staff and that under which the land is cultivated by the cultivator himself under departmental supervision, should be adopted in all provinces and the results compared.

The Commission suggested peripatetic demonstrations of the use of improved implements and also suitable arrangements by agricultural departments or by manufacturers in consultation with them for hiring out the more expensive implements and machinery.

They considered agricultural shows a useful means of following up the demonstration work of the agricultural departments and recommended the establishment of permanent agricultural stalls in regulated markets.

The various **publications issued by the agricultural departments** were held to serve a useful purpose in stimulating general interest in the work of the departments but the vernacular leaflets, which are now issued in large numbers, were of little value unless issued in connection with a definite demonstration of their subject matter, as were other forms of propaganda such as lectures, the cinema and wireless. The Commission recommended that the agricultural departments should consider the advisability of undertaking the production of films as also the possibilities of demonstration trains as organised recently in Bengal and the Punjab.

The Commission pointed out that **agricultural associations** had, for various reasons, proved a failure in most provinces and that the agricultural departments had not been successful in exploiting the possibilities offered by the co-operative movement for propaganda. They suggested that the divisional boards and taluka development associations in the Bombay Presidency constituted an organisation for the coordination of the propaganda work of the agricultural and co-operative departments which was worthy of study by other provincial governments. Far greater use should be made of cooperative societies in propaganda work.

The Commission recommended the concentration of demonstration and propaganda work both in regard to the area of operation and the subjects selected for demonstration. They recommended the appointment to the office of the Director of Agriculture of an officer whose sole duty it would be to organise and systematise propaganda work throughout a province. They held that the propaganda work of departments concerned with rural development, other than the agricultural and veterinary departments, was best carried on through associations organised for general purposes and through co-operative bodies.

An annual prize awarded by the Government of India for the most striking agricultural improvement of the year was suggested as a valuable stimulus to agricultural development.

Animal Husbandry.—Chapter VII of the Report is the most valuable contribution to the solution of the various problems connected with the improvement of cattle in India that has yet been published.

The Chapter commences with a brief reference to sheep and goat breeding. The Commission held that, in this direction, the main energies of livestock experts should be concentrated on a study of the best Indian types and the building up, by selection, of a flock of ewes or she goats with definite characteristics before any modification of characteristics by crossing is decided on.

The Commission emphasized the extent to which the prosperity of Indian agriculture is linked with the improvement of livestock, and stated that the four cardinal points in a policy of improvement must be :—

(a) attention to all matters that would tend to decrease the number of bullocks required for cultivation ;

(b) an effort to secure better treatment for dry cows and cows in-calf ;

(c) a reduction in the number of plough cattle ; and,

(d) an increase in the efficiency of plough cattle.

They held that, in nearly every part of India, the common grazing lands and all grass lands close to villages were hopelessly overstocked but that, nevertheless, where their treatment was good, many fine cattle belonging to a number of well recognised breeds were to be found. No large additions to grazing grounds are, however, possible and efforts should, therefore, be concentrated on increasing the productivity of the land already growing grass. The Commission considered that the scope for such efforts was great and suggested various ways in which the productivity of the existing grazing grounds could be increased, *e.g.*, by regulation and the establishment of rotational grazing. They recommended that the importance of cutting and storing dry grass in default of hay and of making hay, wherever conditions permitted, should be impressed on the cultivator. They considered that there were great possibilities for silage but that there were practical difficulties in persuading the cultivator to adopt it. The immediate policy should be to concentrate on efforts to get the cultivator to make silage for his cows and young stock from recognised fodders and inferior grasses which experiments have shown to be suitable for this purpose. Even, however, when all possible use has been made of existing sources of supply, a shortage of fodder is likely to arise in many parts of India. The Commission held that the cultivation of fodder on the cultivator's holding was the only remedy for this. They drew attention to the great possibilities of Egyptian cover, especially if its seed could be produced cheaply and on a commercial scale in India and suggested the encouragement of the cultivation of leguminous fodder crops by

advantages of the supply of combined nitrogen available in the large crops of oil-seeds grown in India can be secured is by the natural development of the oilcrushing industry and advocated an investigation into the possibilities of an extension of the industry and also into the economics of the bone-crushing industry. They were against any further investigation under Government auspices into the possibilities of manufacturing synthetic nitrogen in India.

The Commission pointed out the great scope which still exists for further work in introducing **improved varieties of crops** in India, especially in regard to millets, pulses and oil-seeds. They held that, of the methods of obtaining varilties superior to those ordinarily grown, selection is the one which still, in general, offers the greatest possibilities in Indian conditions. Hybridisation should only be undertaken by officers who, in addition to special training have had experience of Indian crops and conditions.

Experiments in the introduction of new crops should continue but work on exotics should, in no circumstances, take precedence of work on crops already grown in India. No new varieties should be put out until they have been thoroughly tested in the conditions under which they would be grown by the cultivator and it has been thoroughly well established that they possess marked advantages over those already grown.

The Commission held that, though seed merchants of proved integrity and enterprise should be encouraged by the agricultural departments, for a very long time to come **seed distribution** must continue to form one of the most important branches of the work of the agricultural departments. Co-operative agency appeared to offer the best prospects of assistance to the departments in their work but use might also be made of private seed agents. A considerable increase in the number of seed farms was desirable. A separate organisation within the agricultural departments for seed distribution and seed testing was recommended, this organisation to be in charge of a Deputy Director working under the Director of Agriculture. Though continued research on rotation and methods of tillage were required, the Commission held that the more important problem in regard to methods of tillage was that of bringing home to the cultivator knowledge already available.

The Commission did not consider that the agricultural departments had made the fullest use of the opportunities which had presented themselves in regard to the introduction of **improved implements**. The main reasons for this were that agricultural engineering had been regarded as a secondary sphere of departmental activity and that work on implements had in several provinces, been entirely overshadowed by that connected with pumping and boring operations. The Commission, therefore, recommended a complete reorganisaion of the agricultural engineering sections of the agricultural departments which should, in all respects, be integral parts of the departments. They held that the aim of the agricultural departments should be the evolution of a small number of types of implements and machinery suitable for a wide range of conditions and suitable also for mass production. Investigation into the relation of the capacity of the draught cattle of India to the implements they are required to draw was also suggested.

As regards **pests and diseases**, the Commission did not consider any modification of the rules framed under the Destructive Insects and Pests Act was called for. They suggested legislation on the lines of the Madras Agricultural Pests and Diseases Act for other provinces and also to prevent the importation of pests and diseases from India into Burma. The strengthening of the Imperial and Provincial entomological and mycological staff in certain respects was recommended as was the grant of gun licenses on a more liberal scale in order to deal with the damage done to crops and cattle by wild animals.

Subdivision and Fragmentation of Holdings.—In Chapter V, the Commission discussed one of the greatest obstacles to agricultural improvement in India, that presented by the smallness of holdings resulting from subdivision, which is chiefly due to the laws of inheritance customary amongst Hindus and Muhammadans which enjoin a succession to immovable property amongst all the heirs usually in equal shares, and fragmentation which is due, in the main, to the way in which the division of property is effected. The Commission pointed out that subdivision had been retarded where restrictions on the alienation of land had been imposed but that no other suggestion had been put forward for the prevention of further subdivision without interfering with the laws of inheritance. The only measure that appeared to promise relief from the evils arising from the fragmentation of holdings was the process known as consolidation of holdings. Some very striking results on these lines had been achieved on a voluntary basis in the Punjab through the agency of the Co-operative Department, and, in several provinces, opinion in favour of action on similar lines had manifested itself. The Commission held that the initiative must come from the State which should undertake propaganda work, explore the actual situation and bear the cost in the early stages. They laid down the principles which should be embodied in any legislation designed to promote consolidation.

Demonstration and Propaganda. In Chapter VI, the Commission discussed the best means of bringing improved methods of agriculture to the notice of the cultivator. They suggested that the several methods of propaganda employed, their relative cost and the claim of each on the time of the staff, should be frequently reviewed in the light of recorded results and that any method proved ineffective should be abandoned. In their view, the only hope of convincing the cultivating classes of the advantage of agricultural improvement lay in ocular demonstration. Demonstration on the cultivator's own fields was preferable to that on a Government demonstration farm in view of the ineradicable suspicion by the cultivator of the results obtained on the latter. There was, however, no objection to the establishment of special demonstration farms for demonstrations involving industrial as well as agricultura operations.

Experimental farms were unsuitable for demonstration work and should be confined to the purpose for which they were intended. Departmental seed farms, on the other hand, could be used with advantage for such work. Demonstration farms, established to demonstrate the possibilities of capitalistic farming, should be run at a profit and seed farms should be at least self-supporting. Short courses in particular subjects should form an important part of the work of demonstration and seed farms. The two systems of carrying out demonstrations on the cultivator's own fields, that under which a plot is hired and the cultivation is carried on throughout by the departmental staff and that under which the land is cultivated by the cultivator himself under departmental supervision, should be adopted in all provinces and the results compared.

The Commission suggested peripatetic demonstrations of the use of improved implements and also suitable arrangements by agricultural departments or by manufacturers in consultation with them for hiring out the more expensive implements and machinery.

They considered agricultural shows a useful means of following up the demonstration work of the agricultural departments and recommended the establishment of permanent agricultural stalls in regulated markets.

The various **publications issued by the agricultural departments** were held to serve a useful purpose in stimulating general interest in the work of the departments but the vernacular leaflets, which are now issued in large numbers, were of little value unless issued in connection with a definite demonstration of their subject matter, as were other forms of propaganda such as lectures, the cinema and wireless. The Commission recommended that the agricultural departments should consider the advisability of undertaking the production of films as also the possibilities of demonstration trains as organised recently in Bengal and the Punjab.

The Commission pointed out that **agricultural associations** had, for various reasons, proved a failure in most provinces and that the agricultural departments had not been successful in exploiting the possibilities offered by the co-operative movement for propaganda. They suggested that the divisional boards and taluka development associations in the Bombay Presidency constituted an organisation for the co-ordination of the propaganda work of the agricultural and co-operative departments which was worthy of study by other provincial governments. Far greater use should be made of co-operative societies in propaganda work.

The Commission recommended the concentration of demonstration and propaganda work both in regard to the area of operation and the subjects selected for demonstration. They recommended the appointment to the office of the Director of Agriculture of an officer whose sole duty it would be to organise and systematise propaganda work throughout a province. They held that the propaganda work of departments concerned with rural development, other than the agricultural and veterinary departments, was best carried on through associations organised for general purposes and through co-operative bodies.

An annual prize awarded by the Government of India for the most striking agricultural improvement of the year was suggested as a valuable stimulus to agricultural development.

Animal Husbandry.—Chapter VII of the Report is the most valuable contribution to the solution of the various problems connected with the improvement of cattle in India that has yet been published.

The Chapter commences with a brief reference to sheep and goat breeding. The Commission held that, in this direction, the main energies of livestock experts should be concentrated on a study of the best Indian types and the building up, by selection, of a flock of ewes or she goats with definite characteristics before any modification of characteristics by crossing is decided on.

The Commission emphasized the extent to which the prosperity of Indian agriculture is linked with the improvement of livestock, and stated that the four cardinal points in a policy of improvement must be :—

(a) attention to all matters that would tend to decrease the number of bullocks required for cultivation ;

(b) an effort to secure better treatment for dry cows and cows in-calf ;

(c) a reduction in the number of plough cattle ; and,

(d) an increase in the efficiency of plough cattle.

They held that, in nearly every part of India, the common grazing lands and all grass lands close to villages were hopelessly overstocked but that, nevertheless, where their treatment was good, many fine cattle belonging to a number of well recognised breeds were to be found. No large additions to grazing grounds are, however, possible and efforts should, therefore, be concentrated on increasing the productivity of the land already growing grass. The Commission considered that the scope for such efforts was great and suggested various ways in which the productivity of the existing grazing grounds could be increased, *e.g.*, by regulation and the establishment of rotational grazing. They recommended that the importance of cutting and storing dry grass in default of hay and of making hay, wherever conditions permitted, should be impressed on the cultivator. They considered that there were great possibilities for silage but that there were practical difficulties in persuading the cultivator to adopt it. The immediate policy should be to concentrate on efforts to get the cultivator to make silage for his cows and young stock from recognised fodders and inferior grasses which experiments have shown to be suitable for this purpose. Even, however, when all possible use has been made of existing sources of supply, a shortage of fodder is likely to arise in many parts of India. The Commission held that the cultivation of fodder on the cultivator's holding was the only remedy for this. They drew attention to the great possibilities of Egyptian cover, especially if its seed could be produced cheaply and on a commercial scale in India and suggested the encouragement of the cultivation of leguminous fodder crops by

the remission of the charge for water from government sources of irrigation or by the grant of concession rates.

The commission held the task of the livestock breeder to be the establishment of pure and improved **types of good cattle.** They pointed out the great difficulties of this task in Indian conditions even when a single purpose is in view and the obstacles to success involved in the quest for dual purpose breeds, *i.e.,* for breeds suited for both draught and milking and *ghi* production. In their view, caution was required in improving the milking qualities of draught breeds of cattle, lest other qualities which gave special value to the breed were sacrificed. The attempt to provide dual purpose cattle should only be made in those districts in which the prospects for successful milk production were markedly better than, on the average, they now are. Even in such districts, the question whether it was expedient to develop high milk production in cows or to resort to buffaloes was one which required careful consideration. In breeding draught cattle, the general rule should be to encourage qualities only in so far as these were entirely consistent with the maintenance of the essential qualities which such cattle should possess. The Commission considered that there was room for the buffalo as well as the cow as a dairy animal, and that the aim of the breeder of buffaloes should be an increase in the productiveness of the she-buffalo and the maintenance of a sound constitution.

Various ways in which action could be taken to augment and cheapen the supply of pure milk to large cities were suggested.

The Commission recommended that, where cultivators evinced a real interest in their livestock, the organisation of co-operative breeding societies should be encouraged by the loan or gift of a good bull and by the provision of grazing ground, if available, on favourable terms. They were not in favour of the prohibition of the export of breeding bulls but considered that the export of cows and heifers was usually undesirable and should be closely watched by Government. They did not advocate the general institution of herd books on the lines of those maintained in western countries or the formation of milk recording societies of the western type.

The control of livestock improvement should generally be entrusted to the agricultural departments. Where veterinary officers showed a special aptitude for work on livestock improvement, they should be posted to livestock farms. Whole-time officers in charge of livestock improvement should be appointed in all major provinces.

The Commission recommended that the staff and equipment of the Animal Nutrition Section of the Imperial Institute of Animal Husbandry and Dairying at Bangalore should be enlarged and that a scheme for a Research Institute for the investigation of animal nutrition problems should be prepared. The establishment of a research institute for the study of animal genetics was considered unnecessary in present conditions.

The Commission recommended that the work of the **Cattle Bureau** should be taken over by the Council of Agricultural Research and that Cattle Conferences on the lines of those held in conjunction with recent meetings of the Board of Agriculture should be held at intervals of about two years. They considered it desirable that the Central Government should pay much more attention to cattle improvement and that one of the whole-time members of the proposed Imperial Council of Agricultural Research should represent the interests of animal husbandry. This representative should be an authority either on livestock breeding, animal husbandry or veterinary medicine.

Forests.—In Chapter VIII, the Commission dealt with Forests in relation to agriculture. They suggested that grass cutting should be encouraged in preference to grazing, that the grazing of inferior cattle in the forests should be discouraged and that the intensity of grazing consistent with the proper development of the forests and the preservation of desirable grasses should be determined as soon as possible. They recommended that the question of fodder supplies from forest areas should be examined by forest and agricultural officers in consultation, and that the cost and efficiency of wood and charcoal relative to that of coal should be investigated. They held the initiation of new, and the development of existing, forest industries to be matters of great importance to the agricultural population in the vicinity and pointed out the wide field which exists for experiment and development in regard to these industries. In regions of heavy rainfall, the only remedy against harmful deforestation appeared to be protection against damage by cultivators and their cattle in order to allow of natural regeneration. In tracts of light rainfall, there appeared to be no generally satisfactory remedy though, in carefully selected areas, artificial regeneration might be possible at high cost.

The Commission recommended that the forest areas in each province should be classified with a view to determining those areas which were most suitable for the growth of timber or the preservation of which under forests was desirable on climatic or physical grounds, those which were most suitable for development as fodder reserves or grazing grounds and those which should be handed over for ordinary cultivation. The Commission held that the most promising method of establishing village forests was to be found in handing over to village management certain more or less wooded areas now under the management of the Forest Department. The creation of a special agency would be required to manage minor forests, to give advice and technical assistance to forest *panchayats* and co-operative afforestation societies, and, generally, to develop to their utmost economic capacity the forest resources of the plains. The question whether this branch should be part of the Forest Department or should work under the Revenue Department was one to be decided in the light of the local conditions. The Commission considered that it would be advantageous if short courses were instituted at the agricultural colleges for all newly recruited forest officers and if forest officers were attached to the head-

quarters of the provincial agricultural department before being posted to the new minor forests division.

Diseases of Livetock and their Control.—The Commission commenced Chapter IX by pointing out the immense losses to agriculture in India caused by contagious diseases of animals of which rinderpest is the most formidable. They did not consider measures for stamping out rinderpest on the lines possible in European countries practicable in India or that the time was ripe for the establishment of protective belts on the South African model. In present conditions in India, rinderpest and other contagious diseases must be combated by measures aiming at the protection of the individual animal rather than by measures which aimed at stamping out the source of infection. In their view, the serum-simultaneous method of inoculation offered the only hopeful method of combating the ravages of rinderpest and, given proper safeguards, involved a risk so slight that, in view of the benefits conferred, it should be accepted. Its employment on a large scale was, therefore, recommended but, in view of the practical difficulties involved, general resort to compulsory inoculation was not considered desirable, though it should be enforced for all animals kept by milksellers in large cities. All inoculation against disease should be done free of charge. An All-India Contagious Diseases of Animals Act should be passed with a view to ensuring uniform procedure in dealing with contagious diseases.

The Commission recommended that, in all provinces, the aim should be to provide a veterinary hospital with accommodation for in-patients at the district headquarters and, in addition, a number of dispensaries serving subdivisions of the district. The value of dispensaries would be greatly enhanced if two or more veterinary assistants were attached to them, one or more of whom would be free for touring duties.

In the view of the Commission, the control measures for treating and preventing the spread of **contagious diseases** should be regarded as the concern of the provincial governments; the duty of providing a local veterinary service for treating diseases not scheduled as contagious and for dealing with operations and wounds should, as soon as the necessary arrangements could be made, rest with local bodies. The aim should be to provide on an average one qualified veterinary surgeon for every district in British India and one veterinary assistant surgeon for each 25,000 cattle. Each province should be divided, for veterinary purposes, into two or three circles, each of which should be in charge of a deputy director who would be a member of the Indian Veterinary Service or of the new superior veterinary services. The qualified veterinary surgeons provided for the districts would constitute the Provincial Veterinary Service, the primary duty of which would be the control of epidemic desease but which would also be entrusted with the supervision of dispensaries and of touring veterinary assistants. The subordinate veterinary services would continue as at present to be mainly employed by local boards but the immediate transfer to the boards of complete control over them was not recommended as progress in the direction of transferring greater responsibility to local bodies in veterinary matters should only be made gradually. When complete transfer had been effected, a Veterinary Reserve Corps of selected veterinary assistants should be formed.

The Commission held that, for the **training of veterinary surgeons** and veterinary assistant surgeons, two entirely distinct courses were required with different entrance requirements and different classes at all stages. The framing of a suitable curriculum for training veterinary assistant surgeons should be referred to a body of experts. The course should extend over two or three years and special prominence should be given in it to the anatomy, physiology, and diseases of cattle. The course of study for veterinary surgeons should extend over a period of five years from matriculation and should end in a degree. It should be settled by Conference between the University and veterinary authorities. The establishment of an All-India Veterinary College was not recommended nor was the expansion of the Imperial Institute of Veterinary Research at Muktesar as an educational centre. It was suggested that, at the outset, one of the existing veterinary colleges should be selected for the training of veterinary surgeons and that the training should be supplemented by a short period of work at Muktesar.

The Commission considered that the provincial veterinary college should be the natural centre of research work in the provinces, and that all senior officers employed in the colleges should be expected and encouraged to undertake investigations in their own special spheres. They held that Muktesar was well suited for the prosecution of research into animal disease and that a second Research Institute was not required. A number of suggestions for improvement in the organisation of the **Muktesar Institute** were made, the most important of which were that an officer with administrative experience should be attached to the staff to relieve the Director of administrative work and that the expenditure on research work should be separated as fully as possible from that on manufacturing operations. It was recommended that Provinces and States should share in any profits from the manufacture of sera in proportion to their purchases and that the administrative control of the Institute should pass from the Agricultural Adviser to the Government of India to the Director of the Institute. The revival of the appointment of Inspector General, Civil Veterinary Department, was held to be unnecessary but it was proposed that a small Standing Committee of the Council of Agricultural Research to deal with veterinary matters should be constituted. The Chairman of this Committee should be the whole-time member representing animal husbandry on the Research Council.

Irrigation.—In Chapter X, the Commission examined the present position of irrigation in India and its future possibilities from the agricultural point of view. After giving a brief survey of the development of irrigation in India and a description of the projects in progress or under consideration, they suggested a periodic revision of the position in regard to all outstanding irrigation projects and expressed

the hope that the relaxation since the introduction of the Reforms, of the financial rules which formally governed the construction of protective works would furnish a stimulus to the construction of this class of works. They recommended that further investigation and experiment should be undertaken before a final decision against the sale of water by volume was reached. They did not consider any change in the agency charged with the distribution of water necessary but suggested that the function of irrigation *panchayats* should be encouraged. The construction and maintenance of minor irrigation works should be entrusted to a special agency. Pumping and boring operations should be entrusted to the Agricultural Departments which should make detailed investigations into the economics of tube well irrigation and should carry out a systematic survey of subsoil water supplies. Government assistance in regard to the construction of tube wells should be limited to the provision of information, of technical advice and of loans, where required, and to placing boring equipment and skilled labour at the disposal of the landholder on payment of a moderate fee. The Commission held that the construction of ordinary wells was essentially a matter for private enterprise but that there were many ways in which the agricultural and irrigation departments could help the landholder. In districts where holdings were very small, every effort should be made to encourage the co-operative sinking and working of wells. Where the number of abandoned wells was at all numerous, a special enquiry should be made into the causes of abandonment.

The Commission considered the establishment of closer relations between the agricultural and irrigation departments advisable and suggested that short courses in agriculture for irrigation officers and in irrigation for agricultural officers should be instituted.

The establishment of a Central Bureau of Information on irrigation matters and frequent conferences of irrigation engineers were recommended. It was suggested that more attention should be paid to research on irrigation problems in all provinces in which irrigation is of importance and that there should be the fullest collaboration in such research between the agricultural and irrigation departments, the assistance of the Indian Universities in such research being enlisted. The Commission did not advocate the establishment of a Central Station for irrigation research but proposed that the work of each provincial station should be passed under review by a Committee appointed by the local government in consultation with the Central Board of Irrigation and the Council of Agricultural Research.

The special irrigation problems of Sind, Bengal, the North-West Frontier Province and Baluchistan were reviewed, the most important recommendations under this head for Sind being that that sub-province should have a Director of Agriculture of its own with headquarters at Karachi, and that a chain of research stations subsidiary to the station at Sakrand with a full staff of competent officers should be established. For Bengal, the separation of the Irrigation Department into two separate departments, one to deal with irrigation proper and the other with navigation, embankments and drainag was recommended as was also the investigation by a committee of experts of the problems presented by the river systems of that province.

The Commission suggested that the Central Bureau of Information for Irrigation should deal with matters arising out of hydro-electric development and that advice in regard to hydro-electric schemes should be obtained from firms of consulting engineers.

Communications and marketing.—In the first part of Chapter XI, the Commission discussed the present state of communications in India. They pointed out that, although the improvement of rural communications was a more important factor in rural development, the condition of the roads in India had deteriorated in recent years. One cause of this was the rapid expansion of motor traffic which had brought into existence an entirely new range of problems of road construction and maintenance. The Commission suggested that Road Boards with functions similar to those which have been entrusted to the Communication Boards in the Punjab and Burma should be constituted in all provinces. They emphasised the necessity that special attention should be paid, in any ordered programme of road development, to the subsidiary communications which are of the greatest importance from the point of view of the cultivator. Liberal financial assistance should be given by local governments to local bodies to enable them to discharge their duties to roads not included in the arterial system. The policy of grants-in-aid from provincial revenues for the construction or improvement of village roads which is being followed in certain provinces was commended but it was pointed out that the improvement of such roads, must in the main, depend upon the efforts of the villagers themselves and that co-operative action in this direction should, therefore, be encouraged in all possible ways. The Commission expressed the hope that railways and roads in India would be regarded as complementary and not as competitive and that the senseless and wasteful competition between rail and motor traffic which is to-day taking place in many European countries would be avoided. They suggested a periodical revision of railway freights with a view to the adjustment of their incidence as between various sorts of agricultural produce. The Commission did not consider that, in ordinary circumstances, any case could be made out for the introduction of tramways to develop rural transport or that roadless tractors could be of any material assistance in opening up rural areas.

The Commission were of opinion that, apart from the organization of producers for the sale of produce, the most effective means of eliminating unnecessary middlemen were the provision of good roads and the establishment of well regulated markets, easy of access to the cultivator. They, therefore, suggested the establishment in all provinces of *regulated markets* on the Berar system, as modified by legislation recently enacted in Bombay, and recommended that this system should be extended to products other than cotton. Regulated

markets should only be established under provincial legislation and local governments should take the initiative in establishing them. The Commission laid down the lines on which such markets should be organised and suggested ways in which they might be utilised for purposes of propaganda in favour of agricultural improvement and of thrift. They recommended that the Government of India should again undertake an investigation into the possibility of standardising weights and measures throughout India and added that Burma required separate treatment in this respect.

The Commission found that much Indian agricultural produce was marked in an unsatisfactory condition though matters in this respect had improved considerably in recent years. Effective pressure to secure improved quality from the producer must, in the main, be applied by the agricultural and co-operative departments though organisation amongst the ultimate buyers was, in some instances, an effective weapon and organised trade associations in India could give great assistance. The most effective method of enabling the cultivator to secure an adequate premium for superior quality was held to be organisation for the purposes of sale. Co-operative sale societies should be encouraged in all possible ways by the agricultural and co-operative departments. Help to these societies could best be given by agricultural departments in the form of assistance in the grading of produce. Auction sales by the departments were considered a useful means of securing an adequate premium for the superior quality of a new variety, especially in the earlier stages but should only be continued until they could be taken over by co-operative societies or private agencies.

Whilst the Commission suggested that the possibilities of developing an export trade in high class wheat should be borne in mind, they did not recommend the establishment of a grain elevator system in India.

Market surveys were regarded as an essential preliminary to the formulation of an effective policy for the improvement of marketing. The lines on which such surveys should be carried out were suggested as was the appointment of an expert marketing officer to the staff of the agricultural departments in all the major provinces.

The Commission also recommended the appointment of an officer with experience of agriculture and co-operation to the staff of the Indian Trade Commissioner in London and to that of the Director General of Commercial Intelligence in Calcutta. They considered that the appointment of separate Trade Commissioners in other countries than England would ultimately be desirable.

The Finance of Agriculture.—In Chapte XII, the Commission dealt with the question of providing the cultivator the capital he requires. They pointed out that the form of long-term credit which is most common throughout India is based on the mortgage of agricultural land. They suggested that no usufructuary mortgage of agricultural land should be permitted unless provision were made for automatic redemption within a fixed period of years, of which twenty should be the maximum. The question of legislation in regard to the redemption of mortgages on the lines of the Punjab Redemption of Mortgages Act was commended to the consideration of other local governments. The Commission held that the desirability of extending the principle of statutory restriction on the alienation of land could only be measured in the light of the local conditions, but that an enquiry should be made into the extent to which the hereditary cultivating class is being expropriated by those who do not themselves cultivate the land. Where existing systems of tenure or tenancy laws operate in such a way as to deter landlords from investing capital in the improvement of their lands, it was suggested that the subject should receive careful attention with a view to the enactment of such amendments as might be calculated to remove the difficulties and that action to permit the establishment by landlords of home farms was specially necessary. The working of the Land Improvement Loans Act and of the Agriculturists Loans Act was considered satisfactory but it was recommended that steps should be taken to make landholders better acquainted with the facilities offered by the former. The Commission held, however, that the greatest hope for the salvation of the rural masses from their crushing burden of debt lay in the growth and spread of a healthy and well organised co-operative movement and that local government should, therefore, give that movement all the encouragement possible. Legislative measures to deal with the problem of indebtedness had proved a failure. This failure was specially disappointing in the case of the Usurious Loans Act, the provisions of which were specially calculated to remove the worst evils of uncontrolled usury, and it was recommended that an enquiry should be made in all provinces into the reasons why this Act had not been utilized and that a special report on its working should be included in the annual reports on the administration of civil justice. The Punjab Moneylenders' Bill and the British Moneylenders' Act of 1927 were commended to the consideration of local governments as was the case for a simple Rural Insolvency Act. Experiments with conciliation bodies were suggested in certain selected areas as was a periodical review by the Income Tax Department of the position of the moneylender.

Co-operation.—Chapter XIII of the Report is devoted to the Co-operative movement in India. The Commission held that the main activities of that movement must continue to be directed to the expansion of the rural credit system. Further effort to fulfil the standards laid down by the Committee on Co-operation in India of 1914-15, which was presided over by Sir Edward Maclagan, appeared to them to be required and they suggested that an enquiry into the working of the movement on the lines followed in the Central Provinces, the United Provinces and Madras might be undertaken in other provinces with advantage. They held that the only remedy for the unsatisfactory condition of the movement in some provinces was the patient and persistent education of the members of Co-operative Societies in the principles and meaning of co-operation. They recommended that every effort should be made by the co-operative departments in all provin-

ces to build up a highly educated and well trained official staff and did not consider that the provision of such a staff should weaken the position of the honorary worker. They considered that progress in the organisation of a supervising agency by federating primary societies into supervising unions had been sufficiently satisfactory to justify further experiments in this direction. The financing and supervision of primary societies should be under separate control.

The Commissioner recommended that the best man available should be selected as Registrar of Co-operative Societies and should hold the appointment for not less than five years or more than ten. Local Governments should impress upon the officers of all departments the importance they themselves attach to a sympathetic attitude towards all phases of co-operative activity.

It was suggested that Government should give liberal assistance in the early stages to the more specialised forms of co-operative activity such as consolidation of holdings, adult education, irrigation and the like. Where expenditure by Government on audit would involve the comparative neglect of education, education should be given preference and the statutory audit should be paid for by societies.

The Commission endorsed the resolution passed by the Conference of Registrars of 1926 in favour of the establishment of *land mortgage banks* and made a number of recommendations in regard to the organisation and working of such banks and the form in which they should receive assistance from Government.

Outside the credit movement, the main function of the co-operative departments was held to be the preparation of the ground for the advice of the experts. In the propaganda work of other departments, preference both of time and attention should always be given to a co-operatively organised body of cultivators rather than to isolated individuals. Substantial progress in non-credit co-operation was not to be expected unless expert advice was liberally given. Whether this advice should be given by the technical department concerned or by the loan of technical officers to the Co-operative Department must depend on the stage of development and the particular form of co-operative activity which it was desired to foster. The desirability of appointing a special officer of the grade of deputy director of agriculture to work under the Registrar, as recommended by the Madras Committee on Co-operation, might be examined in other provinces.

The Commission did not consider an All-India Committee of Enquiry to review the progress of the movement and the defects revealed since the Committee on Co-operation sat in 1914-15 to be necessary. They suggested that official and honorary workers should be encouraged to study co-operative developments in other provinces.

The Village.—In Chapter XIV, the Commission discuss the opportunities that exist for an improvement in the general rural environment of the cultivator and in the conditions in which he lives. They pointed out that the isolation and the self-subsistent economy of village life are tending to break down and held that, in the administrative sphere, provision already exists to enable the villages to maintain and develop self-government and, at the same time, to participate in the wider life of the province.

The Commission then proceeded to emphasise the close and important interaction between agriculture and public health. The working of the Madras district health scheme showed how public interest in health matters could be developed under official guidance. The principles embodied in the Bombay village medical aid scheme were commended as were schemes for subsidising medical practitioners to settle in small towns and villages. An improved water supply was held to be so important that all measures possible to secure this should be undertaken by the local authorities.

A much wider distribution of quinine was considered necessary and it was recommended that, in order to secure this, the development of cinchona cultivation, the manufacture of quinine, and the control of distribution so far as price within India was concerned should be made a responsibility of the central Government, and that much more scientific investigation into the cultivation and manufacturing problems connected with cinchona should be undertaken.

The Commission recommended that the efforts of the medical and public health departments and of non-official agencies in their fight against disease and insanitary conditions should be supported by the central and provincial departments with all the resources, financial and otherwise, at their command. They held that research into problems of human nutrition was of such importance in Indian conditions that a Central Institute of Human Nutrition should be established, that a committee of workers on human and animal nutrition should be formed and should meet at regular intervals and that local governments should consider the desirability of undertaking research in problems of human nutrition either in provincial institutes or through individual officers.

It was pointed out that villagers have ample time at their dispoal for improving the amenities of their village by co-operative action. Specific directions in which assistance might be given them were the extension of village sites where these were congested and facilities for providing schools with adequate playing fields. For these and other purposes, the villagers were, however, much in need of leadership. Instruction of village headmen and subordinate revenue officials in the ideals of village improvement might, in some cases, be productive of good results. In other cases, a "guide" for a group of villages trained on the lines adopted in the Gurgaon district of the Punjab would seem to offer the best solution. The Commission drew special attention to the valuable lessons to be drawn from the Gurgaon uplift compaign and considered that the rural community movement throughout the Punjab combined the advantages of both the official and the private type of organisation and would prove of even greater value if it developed a women's side to its activities.

The establishment of a Bureau of Economic Research in all provinces on lines similar to those on which a Board of Economic Inquiry has been established in the Punjab was commended to the notice of the provinces and the part that Universities could play in assisting the work of rural development on both its economic and educative sides was emphasised.

The Commission held that no field of rural work gave private organisations a greater opportunity for usefulness than the raising of the members of the depressed classes in the villages to full membership of the common life and that the best means of effecting this were education and the inculcation of self-help.

It was pointed out that no lasting improvement in the standard of living of the great mass of the population could possibly be attained if every enhancement in the purchasing power of the cultivator were to be followed by a proportionate increase in the population.

Education.—In Chapter XV, the Commission discuss the type of education best adapted to the needs of an agricultural population. The Chapter commences with a view of the state of primary education in India and brings on in striking fashion its unsatisfactory character as shown by the figures of literacy and of female education. As regards the latter, the Commission pointed out the great importance to rural development of the spread of literacy among the women of India and suggested that the influence of female education in spreading lasting literacy among the young should be ascertained with a a view to demonstrating the true relation between female literacy and the spread of general literacy. For the unsatisfactory state of primary education generally, and epecially for the appalling wastage in the primary schools due to the fact that so many boys attending those schools do not stay for more than a year and that, of those who do, only half complete the course, they held the only remedy to be the introduction of the compulsory system. This should be introduced as rapidly as local conditions permitted and should be accompanied by a campaign of explanation and persuasion. Co-operative education societies on the Punjab model offered a hopeful means of securing attendance at school in present conditions. Inefficient teaching and its consequent effect on attendance should be remedied by improvements in the training of teachers and in the organisation of primary schools and a number of suggestions to this end were made. The Commission held that no attempt should be made to teach agriculture to boys in primary schools, either theoretically as nature study or practically in school gardens.

As regards the next or middle school stage, the Commission considered that there was n genuine demand for middle schools of the "Loni" type in Bombay which provides a vocational education in agriculture and that such schools were unduly expensive. They therefore recommended that no more schools of this type should be opened and that the existing schools in their present form should be closed. Vernacular middle schools on the lines of the Punjab experiment which include agriculture as an optional subject in the curriculum had, on the other hand, much to commend them and it was suggested that the policy followed in regard to the establishment of such schools in the Punjab, the United Provinces and Bombay should be adopted in other provinces. It was considered preferable to attach farms rather than gardens to such schools, provided teachers competent to manage them could be obtained.

Where high schools, are situated in rural areas, the Commission considered that the addition to the curriculum of a course in agriculture on the lines of that given in vernacular middle schools of the Punjab type should be productive of good results.

The Commission considered the *affiliation of agricultural colleges to universities* desirable. They did not recommend separate courses at the colleges for those whose aim was employment under Government and for those who proposed to farm their own land or that of others. They suggested that the intermediate examination in science of the provincial universities or an equivalent examination should be made an essential qualification for admission to all agricultural colleges and that the length of the full college course should be three years. Greater prominence should be given in the college course to agricultural economics and to instruction in farm management, and the short courses given at certain colleges should also be revised in order to permit of greater attention being devoted to these subjects. The Commission considered the miscellaneous short courses given at the colleges a most valuable form of educational activity. It was suggested that facilities should be provided to enable passed students of the colleges to obtain practical experience before commencing active work either in the public service or on their own lands. The qualifications required for the principalship of a college were laid down and it was suggested that the field of selection for the college staff might be widened by the direct appointment of distinguished graduates in science of the Indian universities. The combination, within reasonable limits, of research with teaching work at these colleges was considered of great benefit to both. Agricultural colleges were recommended for Bengal and Bihar and Orissa.

Rural Industries and Labour.—In Chapter XVI, the Commission deal with the question of industries in relation to agriculture. They pointed out, that industries located in rural areas were at present unimportant from the point of view of their demand on labour and that the multiplication of industries of the ordinary commercial type, such as cotton ginneries, rice mills and sugar refineries, would supply one solution of the problem of spare-time employment in rural areas. Of the suggestions made for the establishment of new industries, that of an increase in the number of implement firms throughout the country appeared to offer, on the whole, considerable promise. The Commission considered that there were opportunities for the development of a poultry industry which Government could further, principally by a carefully planned programme of experiments and a careful recording of the results. It was suggested that the Government should try to bring together the

various interests concerned in the production and sale of lac, with a view to forming a Committee on the lines of the Indian Central Cotton Committee and that, to this end, the existing Indian Lac Association should be reconstituted and strengthened. Whilst the stimulus of new ideas, adequate instruction and the best advice obtainable on the commercial side were the chief needs of village industries, it had to be recognised that the opportunities for improving the condition of the general mass of cultivators by the establishment of rural industries were strictly limited. The Commission held that, as a general principle, it might be laid down that the chief solution of the problems of the cultivator lay in the intensification or diversification of his agriculture. There were indications that, with the spread of industrialism, the tendency would be to multiply the number of small factories. This tendency would be to the cultivator's advantage and the co-operative movement could play an important part in linking him and his produce with the localised factories. Technical education and co-operative organisation were the only means by which the smaller industries could hold their own in the intensive competition of modern times.

The Commission considered that Government could do much to assist the mutual adjustment between the larger industries and agriculture by its policy in respect to communications and the development of power; by technical education; and by the collection of marketing information. In the case of the smaller industries, Government would have to be prepared, for a long time to come, to advise and make suggestions for development and even to be responsible for them in the pioneer stage.

The Commission held that the labour problem of to-day was the same from the agricultural point of view as it was when the Famine Commission reported in 1880, namely, to lessen the pressure of population on the land. They suggested that all restrictions on the free movement of labour in India, *e.g.*, to the tea gardens in Assam, should be reduced to the minimum and abolished as soon as possible. To encourage migration, health conditions should be improved in certain areas and definite schemes of colonisation introduced. Apart from Ceylon and British Malaya, British Guiana alone of the tropical or subtropical part of the British Empire, offered scope for emigration on any considerable scale and the Commission regarded the scheme now under consideration for promoting emigration to that colony as worthy of further exhaustive investigation.

Horticulture and Plantations.—Chapter XVII is mainly devoted to a consideration of the possibilities of extending the cultivation of fruit and vegetables in India. The Commission pointed out that, in Indian conditions, fruit growing can seldom be profitably combined with ordinary cultivation by the small cultivator and that he is faced with serious financial and other difficulties in turning from ordinary tillage to the cultivation of orchard and garden crops. They enumerated the difficulties in regard to the transport and marketing of fruit and vegetables and suggested that investigations into transport and marketing should form an essential part of any policy of active encouragement of either fruit or vegetable production. Where fruit and vegetables were grown on a large scale, the question of establishing regulated markets and of improving marketing conditions generally, including transport and the provision of cold storage, should be examined. Whilst the economic possibilities were being worked out, the agricultural departments should undertake experimental work and should encourage and strengthen private enterprise in establishing nurseries for orchard stock and the production of vegetable seeds.

The Commission considered that the importance to the community of the "planters" crops was not generally realised and suggested that the value of the scientific work done by the Indian Tea Association and the United Planters' Association of Southern India should be recognised, and co-operation between these associations and the agricultural departments secured, by arrangements for their joint representation on the Council of Agricultural Research.

Statistics.—In Chapter XVIII, the Commission made a number of suggestions for the improvement of the statistics relating to agriculture, trade and rural welfare generally issued by the Government of India and Provincial Governments and also for increasing the accuracy of the crop forecasts issued by the Commercial Intelligence Department. They recommended that each agricultural department should be strengthened by the appointment of a statistical assistant and that the appointment of this officer should precede any changes in present arrangements for statistical work. They pointed out that the application of mathematics to agriculture had introduced an entirely new factor into scientific agriculture and recommended the appointment of a statistician with the highest qualifications in this branch of science to the Imperial Agricultural Research Institute. They considered it desirable that a statistical officer should be appointed at the headquarters of each provincial government who would control all government statistical work other than that connected with agricultural statistics and, as director of a bureau of statistical information, would be an adviser to non-official workers. They recommended that the statistical organisation of the Government of India should be strengthened by the appointment of a statistician of first rate ability as head of a separate **Department of Staitstios** and expressed the hope that, as the result of this appointment, a Bureau of Statistical Information would be created with the administration of which leading economists, scientists and business men would be closely associated. They held that every opportunity should be taken to utilise the statistical experience of the International Institute of Agriculture at Rome but that the expense of a whole-time representative of India on the Permanent Committee of the Institute would not be justified by statistical considerations. They suggested that more use should be made of non-official agencies in the collection of agricultural statistics bu t did not consider that, in the present stage o development, extensive use could be made o a system of paid reporters.

The Agricultural Services.—In Chapter XIX, the Commission made detailed recommendations in regard to the recruitment, organisation, pay and conditions of service of the personnel of the Imperial and Provincial Agricultural Departments with special reference to the increased responsibilities which would be imposed on them by the recommendations made in the report and also to the changed conditions resulting from the introduction of the Reforms. They dwelt upon the necessity for a period of post-graduate training as an essential qualification for all candidates from the agricultural colleges for direct recruitment to the higher posts in the agricultural departments, and suggested that this training should ordinarily be given at Pusa. They held that restriction of recruitment for the new superior provincial services which are to take the place of the Indian Agricultural Service to a province or even to India would tell seriously on efficiency. From the point of view of wider outlook and variety of experience, officers from abroad could make a valuable contribution to the development of Indian agriculture and they, therefore, strongly endorsed the hope expressed by the Royal Commission on the Superior Civil Services in India in regard to the continued co-operation of European officers.

Miscellaneous.—In Chapter XX, the Commission discuss a few miscellaneous questions which did not appear to fall naturally within the scope of previous chapters of the Report. Recommendations were made in regard to the agricultural organisation required for the minor provinces of Ajmer-Merwara, the Andaman Islands, Baluchistan, Coorg and Delhi and it was suggested that the Council of Agricultural Research should take a special interest in the development of these provinces. It was pointed out that the foundations of an active policy of co-operation in agricultural and co-operative matters between the governments in British India and Indian States had been laid through representation on the Indian Central Cotton Committee and the Board of Agriculture and the hope was expressed that the manner in which co-operation could be rendered more effective would receive early consideration from the Government of India and the rulers of Indian States. It was suggested that an examination should be made of the action which should be taken to promote the investigation of the problems of agricultural meteorology and to decide which departments should be responsible for the different branches of the work. The continued adherence of India to the International Institute of Agriculture at Rome was regarded as most desirable and was recommended that wider publicity should be given in India to the facilities offered by the Imperia Institute and that the question of reorganising the Indian gallery at the Imperial Institute and of renewing the subscription for its maintenance should be considered.

Conclusion.—In Chapter XXI, the Commission conclude their Report by explaining that their aim had been to bring about greater efficiency throughout the whole field of agricultural production and to render the business of farming more profitable to the cultivator. They state their conviction that the success of all measures designed for the advancement of agriculture in India must depend upon the creation of conditions favourable to progress and emphasise the necessity that the rural problem should be attacked as a whole and at all points simultaneously. They conclude by pointing out the very special measure of responsibility resting on the Viceroy, the Provincial Governors and the Ministers in charge of the transferred departments in bringing about the organised and sustained effort by all the departments whose activities touch the lives and surroundings of the rural population, which is required if the problem of rural uplift is to be adequately dealt with.

Action by the Government of India.—The Government of India convened a Conference of Provincial Ministers of Agriculture and Departmental representatives at Simla from October 1st to the 6th to discuss the recommendations of the Royal Commission. It was announced at the conclusion of the Conference that there had been complete unanimity as to the desirability of accepting the Commission's report as a basis for rural reconstruction and agricultural advance, and for the progressive application of the main recommendations as the circumstance of each province might permit. As regards the Commission's proposals for reorganising the services engaged in the agricultural and veterinary fields, the general view was that the discretion of the Provinces should be left unfettered, in respect both of recruitment and of regulation of the terms of service. The Conference approved the principle of promoting and guiding agricultural (including veterinary) research throughout India on a footing of voluntary co-operation between the Government of India and local governments through an agency representative of All-India as well as provincial interests which would be set up and financed by the Government of India. The Government of India have announced their intention to proceed forthwith with the establishment of the Council of Agricultura Research

AGRICULTURAL PRODUCE.

The following table shows the area under the principal crops, in British India, and their territorial distribution, for 1925-26. The town area is always greater than the area of cultivated land, owing to double cropping. The figures represent acres :—

Province.	Rice.	Wheat.	Barley.	Other Food Grains and Pulses.	Total Food Grains and Pulses.	Oilseeds.	Sugar.	Cotton.	Jute.	Total Area sown.	Net sown Area after deducting Area sown more than once.
Madras	11,322,646	24,122	3,573	17,086,598	28,36,939	4,494,658	194,356	2,887,410	..	38,788,496	4,954,731

The following is a summary of the various **crop forecasts** relating to the season 1927-28 issued by the Department of Commercial Intelligence and Statistics, India :—

Crop and Forecast.	Tracts comprised in the figures and percentage of total Indian crop represented by them.	Estimated Area.	Per cent. of preceding year (100-figure of same date preceding year.)	Estimated outturn.	Per cent. of preceding year (100-figure of same date preceding year.)
		Acres.			
Jute*—Final.	Bengal, Bihar and Orissa, and Assam (100 per cent. of the total Jute area in India.)	3,371,000	88	10,230,000 bales. (*a*)	84
Cotton—Supplementary.	All cotton growing tracts ..	24,722,000	99·6	5,871,000 bales.	117
Groundnut—Final.	Madras, Burma, Bombay † and Hyderabad (92 per cent. of total groundnut area of India).	5,244,000	121	2,571,000 tons.	126
Sugarcane—Final.	U. P., †Punjab, Bihar and Orissa, Bengal, Madras, Bombay and Sind†, Assam, N.-W. F. Province, C. P. and Berar, Delhi, Mysore and Baroda (About 95 per cent of total sugarcane area of India.)	2,954,000	101	3,221,000 tons.	99
Sesamum—Supplementary.	United Provinces, Burma, Madras, Bombay and Sind†, C. P. and Berar, Bihar and Orissa, Bengal, Punjab, Ajmer-Merwara, Hyderabad, Baroda and Kotah‡ (about 89 per cent. of total sesamum area of India·)	5,445,000	113	544,000 tons.	131
Indigo—Final.	Madras, Punjab, Bihar and Orissa, United Provinces, and Bombay, Sind† (84 per cent. of total indigo area of India.)	60,200	57	11,200 cwts.	53
Rice—Final.	Bengal, Bihar and Orissa, Burma, Madras, United Provinces,† C. P. and Berar,† Assam, Bombay, and Sind†, Coorg, Hyderabad, Mysore, and Baroda (97 per cent. of total rice area of India).	77,790,000	98	27,972,000 tons.	94
Rape and Mustard—Final.	United Provinces, Punjab, Bihar, & Orissa, Bengal, Assam, Bombay (including Sind)†, North-West Frontier Province, Delhi, Alwar,‡ Baroda and Hyderabad (94 per cent. of total rape and mustard area of India.)	5,931,000	107	846,000 tons.	84
Linseed—Final.	Central Provinces and Berar, † United Provinces, Bihar and Orissa, Bombay,† Bengal, Punjab, Hyderabad and Kotah‡ (about 93 per cent. of the total linseed area of India).	3,352,000	101	351,000 tons.	87
Wheat—Final.	Punjab, † United Provinces, † Central Provinces and Berar, † Bombay (including Sind), † Bihar and Orissa, North West Frontier Province, Bengal, Delhi, Ajmer-Merwara, Central India, Gwalior, Rajputana, Hyderabad, Baroda and Mysore (98 per cent. of total wheat area of India).	32,211,000	103	7,762,000 tons.	87
Castor Seed—	(Practically all castor-growing tracts).	1,457,000	104	135,000 tons.	105

(*a*) Includes figures for Nepal.
* Issued by the Director of Agriculture, Bengal. † Including Indian States. ‡ Rajputana.

Irrigation.

The chief characteristics of the Indian rainfall are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind. The greatest rainfall actually measured at any station in any one year was 905 inches, recorded at Cherrapunji in 1861, while at stations in Upper Sind it has been nil. There are thus portions of the country which suffer as much from excessive rainfall as others do from drought.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rainfalls during the south-west monsoon, between June and October. During the winter months the rainfall is comparatively small the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of India is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation; in another period the same tract becomes a dreary, sun-burnt waste. The transition from the latter to the former stage often occurs in a few days. From the agricultural point of view the most unsatisfactory feature of the Indian rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches. But if separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Scarcity.—Classing a year in which the deficiency is 25 per cent. as a dry year and one in which it is 40 per cent. as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems of India have been constructed.

Government Works.—The Government irrigation works of India may be divided into two main classes, those provided with artificial storage, and those dependent throughout the year on the natural supplies of the rivers from which they have their origin. In actual fact, practically every irrigation work depends upon storage of one kind or another but, in many cases, this is provided by nature without man's assistance. In Northern India, upon the Himalayan rivers, and in Madras, where the cold weather rains are even heavier than those of the south-west monsoon, the principal non-storage systems are found.

The expedient of storing water in the monsoon for utilization during the subsequent dry weather has been practised in India from time immemorial. In their simplest form, such storage works consist of an earthen embankment costructed across a valley or depression, behind which the water collects, and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs recently completed in the Deccan which are capable of storing over 20,000 million cubic feet of water. By gradually escaping water from a work of the latter type, a supply can be maintained long after the river on which the reservoir is situated would otherwise be dry and useless.

The Three Classes.—Previously all irrigation works were divided into three classes, Productive, Protective and Minor, but during the triennium 1921-24 the method of determining the source from which the funds for the construction of Government works was provided was changed, and now all works, whether major or minor, for which capital accounts are kept, have been re-classified under two heads, Productive and Unproductive, with a third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work can be classed as productive is that it shall, within ten years of the completion of construction, produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the largest irrigation systems in India belong to the productive class. The total capital outlay direct and indirect on irrigation and navigation works, including works under construction, amounted at the end of the year 1925-26 to Rs. 108 crores.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues of India, generally from the annual grant for famine relief and insurance, and are not directly remunerative, the construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief, the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly one-eighth of the whole area irrigated in India from Government works is effected by minor works for which no capital account is kept.

Growth of Irrigation.—There has, during the last fifty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878–79 the area annually irrigated rose to 19½ million acres at the beginning of the century and to 28 million acres in 1919–20, the record year up to that date. This record was, however, again surpassed in the year 1922-23, when the total area irrigated by all classes of works in India, excluding the Indian States, amounted to 28¾ million acres. During the year 1926-27 the total area irrigated by Government works of all classes in British India amounted to some

28.2 million acres which almost approaches the record area of 28¾ million acres irrigated in 1922-23.

The main increase has been in the class of productive works, which irrigated 4½ million acres in 1878-79 and rose to 20,756,209 acres in 1926-27. The area irrigated by unproductive works at the end of 1926-27 was 3,773,272 acres.

The area irrigated in 1926-27 was largest in the Punjab, in which province 10,516,000 acres were irrigated during the year. In addition nearly 670,000 acres were irrigated from channels which although drawing their supplies from British canals, lie wholly in the Indian States. The Madras Presidency came next with an area of 7 million acres, followed by Sind with 3.5 million acres and the United Provinces with nearly 3 million.

Capital and Revenue.—The total capital invested in the works has risen from Rs. 42,36, lakhs in 1900-01 to Rs. 108 crores in 1926-27, an average increase of Rs. 180 lakhs a year. As regards revenue, the Government irrigation works of India, taken as a whole, yield a return of about 6½ per cent. on the capital invested in them ; this is a satisfactory result as Rs. 40,62 lakhs of the total have been spent on unproductive works, most of which return less than 1 per cent. The capital outlay also includes expenditure on a number of large works under construction, which have not yet commenced to earn revenue.

Charges for Water.—The charges for water are levied in different ways in the various provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, 9/10ths of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay, different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may however be regarded as exceptional. Over the greater part of India water is paid for separately, the area actually irrigated is measured, and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried, such as by renting outlets for an annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops, no charge" which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown, and are different in each province and often upon the several canals in a single province. Thus in the Punjab, they vary from Rs. 7-8-0 to Rs. 12 per acre for sugarcane, from Rs. 4 to Rs. 7-8-0 per acre for rice, from Rs. 3-4-0 to Rs. 5-4-0 per acre for wheat, from Rs. 3 to Rs. 4-4-0 per acre for cotton and from Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. No extra charge is made for additional waterings. Practically speaking, Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system, is in force in parts of Bengal and the Central Provinces, under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required ; consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

Triennial Comparisons.—The average area irrigated in British India by Government works of all clases during the triennium 1924-27 was nearly 28 million acres, which is slightly more than in the previous triennium. The areas for each of the three years were 27,156,399 acres in 1924-25; 28,135,123 acres in 1925-26 and 28,243,879 acres in 1926-27.

The results obtained in each province are given in the table below :—

Provinces.	Average area irrigated in triennium 1921-24.	Average area irrigated in triennium 1924-27.
Madras	7,151,988	7,178,457
Bombay (Deccan)	428,750	437,433
Sind	3,436,321	3,509,484
Bengal	100,492	95,516
United Provinces	2,433,595	2,678,178
Punjab	10,465,404	10,349,121
Burma	1,630,794	1,872,383
Bihar and Orissa	960,505	891,984
Central Provinces	431,580	429,911
North-West Frontier Province	390,849	357,325
Rajputana	19,422	23,272
Baluchistan	23,635	22,070
Total	27,473,335	27,845,134

Productive Works.—Taking productive works only, a triennial comparison is given in the following table. It will be seen that the average area irrigated by such works during the triennium was nearly a million acres more than in the previous period.

Provinces.	Average area irrigated in triennium 1921-24.	Average area irrigated in previous triennium 1924-27.
Madras	3,681,946	3,732,271
Bombay Deccan	2,851	2,699
Sind	2,545,065	2,894,468
United Provinces	2,243,989	2,462,061
Punjab	9,714,815	9,755,740
Burma	1,350,780	1,531,403
Central Provinces	181,632	153,942
North-West Frontier Province	216,814	200,413
Total ..	19,937,892	20,732,997

Taking the productive works as a whole, the capital invested in them was, at the end of 1926-27, Rs. 67,44 lakhs. The net revenue for the year was Rs. 659 lakhs giving a return 9·77 per cent. as compared with 9 per cent. in 1818-19 and 9¾ per cent. in 1919-20. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which are under construction, which classes at present contribute little or nothing in the way of revenue; moreover only receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large addition to the general revenues of the country which follows in the wake of their construction.

Unproductive Works.—Turning now to the unproductive works, the areas irrigated in the various provinces during the triennium were as below:—

Provinces.	Average area irrigated in previous triennium 1921-24.	Average area irrigated in triennium 1924-27.
Madras	290,654	271,455
Bombay-Deccan	268,863	277,709
Sind	838,891	527,737
Bengal..	79,121	73,381
United Provinces	180,838	207,312
Punjab	65,844	243,613
Burma..	203,863	268,110
Bihar and Orissa	958,607	889,733
Central Provinces	202,220	230,280
North-West Frontier Province	174,035	156,911
Rajputana	19,422	23,272
Baluchistan	23,635	22,070
Total ..	3,305,993	3,191,588

Non-capital Works.—The results obtained from the non-capital works are given below :—

Provinces.	Average area irrigated in previous triennium, 1921-24.	Average area irrigated in triennium, 1924-27.
Madras	3,179,388	3,174,731
Bombay-Deccan	157,036	157,025
Sind	52,365	87,279
Bengal	21,371	22,135
United Provinces	8,768	8,806
Punjab	684,745	349,768
Burma	76,151	72,870
Bihar and Orissa	1,898	2,246
Central Provinces	47,728	45,689
Total ..	4,229,450	3,920,549

Capital Outlay.—The total capital outlay, direct and indirect, on irrigation and navigation works, including works under construction, amounted at the end of 1926-27 to Rs. 108 crores. The gross revenue for the year was Rs. 11,50 lakhs, and the working expenses Rs. 4,51 lakhs; the net return on capital was therefore 6.47 per cent. Of the several provinces, the return on the capital outlay invested in productive works was highest in the Punjab, where the canals yielded 14·06 per cent. In Madras the percentage of return was 10·64, while in the United Provinces a return of 6·15 per cent. was realised. In considering these figures it must be remembered that the capital invested includes considerable expenditure upon four projects of the first magnitude *viz.*, the Sarda Oudh canals, the Sutlej Valley project, the Lloyd Barrage project and the Cauvery (Mettur) project which were under construction and contributed little or nothing in the way of revenue.

Irrigated Acreage.—A comparison of the acreage of crops matured during 1926–27 by means of Government irrigation systems with the total area under cultivation in the several provinces is given below :—

Provinces.	Net area cropped.	Area irrigated by Government. irrigation works.	Percentage of area irrigated to total cropped area.	Capital cost of Government irrigation & Navigation works to end of 1926-27. In lakhs of rupees.	Estimated value of crops raised on areas receiving State irrigation. In lakhs of rupees.
Madras	37,367,000	7,013,000	18·8	13,25	38,77*
Bombay-Deccan	33,561,000	430,000	1·3	9,74	4,84
Sind	3,961,000	3,507,000	88·5	10,23	9,48
Bengal..	23,546,000	90,000	0·4	4,24	1,21
United Provinces	34,283,000	2,971,000	8·7	19,69	19,55
Punjab	26,179,000	10,516,000	40·2	29,55	45,78
Burma..	16,166,000	1,976,000	12·2	5,85	8,85
Bihar and Orissa	24,252,000	946,000	3·9	6,27	7,20
Central Provinces	17,810,000	395,000	2·2	5,70	2,16
North-West Frontier Provinces	2,426,000	348,000	14·3	2,87	2,35
Rajputana	343,000	31,000	9·0	35	17
Baluchistan	275,000	20,000	7·3	32	5
Total ..	220,169,000	28,243,000	12·8	1,08,06	1,40,41

* Exclusive of the value of crops raised on some 3 million acres irrigated by non-capital works.

Irrigation in 1926-27.—The following table shows the distribution of irrigation in British India during the year 1926-27 under the headings of Productive Works, Unproductive Works and Non-Capital Works:—

Provinces.	Productive Works. Acres.	Unproductive Works. Acres.	Non-Capital Works. Acres.	Total. Acres.
Madras	3,769,600	265,918	2,977,425	7,012,943
Bombay-Deccan	3,044	269,092	157,670	429,806
Sind	2,586,781	838,622	81,625	3,507,028
Bengal	Nil.	68,209	21,560	89,769
United Provinces	2,729,026	230,857	10,844	2,970,727
Punjab	9,848,048	327,919	339,982	10,515,949
Burma	1,564,859	334,617	76,873	1,976,349
Bihar and Orissa	Nil.	943,506	2,867	946,373
Central Provinces	64,923	284,748	45,552	395,223
N.-W. Frontier	189,928	158,009	Nil.	347,937
Rajputana	Nil.	31,340	Nil.	31,340
Baluchistan	Nil.	20,435	Nil.	20,435
Total ..	20,756,209	3,773,272	3,714,398	28,243,879

The area of 9,848,048 acres irrigated by productive works in the Punjab during 1926-27 is the highest on record in that province, the increase being attributable to steady development of irrigation on the Lower Chenab, Lower Jhelum, and Lower Bari Doab Canals.

New Works.—Two major works of exceptional importance are now under construction namely the Sukkur Barrage, and Canals, in Sind, and the Sutlej Valley Canals in the Punjab. The Sukkur Barrage, when completed, will be the greatest work of its kind in the world, measuring 4,725 feet between the faces of the regulators on either side. The total cost of the scheme is estimated at Rs. 1,835 lakhs, of which the barrage accounts for about Rs. 569 lakhs and the canals for Rs. 1,266 lakhs. A gross area of 7½ million acres is commanded, of which 6½ million acres is culturable and an annual area of irrigation of 5¼ million acres is anticipated, of which 2 million acres represent existing inundation irrigation which will be given an assured supply by the new canals. The ultimate annual net revenue forecasted as obtainable from the project, after paying working expenses, is Rs. 194 lakhs, which represents a return of 10½ per cent. on capital. This is the return from water rates alone, but a further large increase in general revenues may safely be reckoned upon from the area of 3 million acres of waste which will be brought under cultivation. There will be increases on this account under practically every head of revenue, such as railways, customs, stamps, excise and the like, not to mention the addition to the country's wealth owing to the production, on land at present barren, of crops to the value of Rs. 2,500 lakhs per annum.

The Sutlej Valley Works consist of four weirs, three on the Sutlej and one on the Panjab, as the Chenab is called below its junction with the Sutlej, with twelve canals taking off from above them. The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,075,000 acres are perennial and 3,033,000 acres non-perennial irrigation. 1,942,000 acres are in British territory, 2,825,000 acres in Bahawalpur and 341,000 acres in Bikaner.

The total cost of the scheme was estimated at Rs. 1,460 lakhs. Upon this a return of 12¾ per cent. is anticipated from water-rates alone. But the scheme has another, and even more important source of revenue. On the introduction of irrigation, no less than 3¾ million acres of desert waste, the property of the three parties concerned, at present valueless, will become available for colonisation and sale. It is customary, in the *pro-forma* accounts of irrigation projects, to credit a scheme with the interest on the sale proceeds of Crown waste lands rendered culturable by its construction; if this is included, the annual return on the works will amount to nearly 38 per cent. It bids fair, indeed, to rival the Lower Chenab Canal, the return from which was more than 55 per cent. in 1926-27 These anticipations may need modification, however, in view of the fact that a revised estimate for the project amounts to Rs. 2,376 lakhs.

The Cauvery Reservoir project, which will cost over 6 crores of rupees and will extend irrigation to a new area of 301,000 acres, was sanctioned by the Secretary of State in 1925. In Bombay Presidency the Bhandardara Dam, 270 feet in height, was completed at the end of 1925 and the Bhatgar Dam at the end of 1926. The Damodhar River (Canal) project, which will irrigate 180,000 acres of rice lands in the Burdwan and Hooghly Districts of Bengal was commenced during the year 1926-27. Excellent progress has been made with the Sarda-Oudh Canals in the United Provinces and the system was inaugurated by H. E. the Viceroy in the autumn of 1928. This project will irrigate more than a million acres.

A comprehensive irrigation programme extending over a period of 14 years has been commenced in the Central Provinces. The possibility of increasing irrigation in the North West Frontier Province is being investigated.

WELLS AND TANKS.

So far we have dealt only with the great irrigation schemes. They are essentially exotic, the products of British rule; the real eastern instrument is the well. The most recent figures give thirty per cent. of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it; well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal-watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals increases the possibilities of well irrigation by adding, through seepage, to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used to a year or two and then allowed to fall into decay. These are temporary or kacha wells. Or they may be lined with timber, or with brick or stone. They vary from the kacha well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikanir, where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the *picottah,* or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot,* or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag, more often it is a self-acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be constructed and repaired by village labour, the *mot* is unsurpassed in efficiency. There is also the Persian wheel, an endless chain of earthenware pots running round a wheel. Recently attempts have been made, particularly in Madras, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting well watered lands from extra assessment due to improvement. These advances, termed *takavi,* are freely made to approved applicants, the general rate of interest being 6¼ per cent. In Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Periyar Lake in Travancore. holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zemindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

Bibliography.—Triennial Review of Irrigation in India, 1925-1927. Calcutta. Superintendent of Government Printing. Price One Rupee. The annual irrigation reports in India used to be as arid as the Sahara, consisting of a dull statistical record. They have been greatly improved of recent years and have now assumed a quite satisfactory form. The major review appears once every three years. The first of these triennial reviews was issued in 1922. Between the triennial reviews there is issued a briefer statement recording the progress of each particular year.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in the provinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are:—Westerly winds of the temperate zone over the extreme north of India; to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, *viz.*; the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, *i.e.*, the summer monsoon, at the Madras Observatory amounts to 15·36 inches the total rainfall for the three months October to December amounts to 29·48 inches. The other region in which the weather is unsettled, during this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 5·26 inches while the total fall for the four months, June to September, is 4·78 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months.—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100, occur in the Deccan; in April the area of maximum temperature, between 100° and 105°, lies over the south of the Central Provinces and Gujarat; in May maximum temperatures, varying between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana: the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 126° registered at Jacobabad on June 12th, 1897. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole

character of the weather changes. During the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat. 30°-35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation, *i.e.*, between the Equator and Lat. 20° to 25° North, there exists a light unsteady circulation, the remains of the north-east trades, that is to say about Lat. 20° North there is a north-east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere. Still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the **south-west monsoon** proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S. to Lat. 30° N. the southern half being the south-east trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapours.

The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma; East Bengal and Assam while another portion curves to south at the head of the Bay and over Bengal, and then meeting with the barrier of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, *viz.*, from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south west and is thus directed towards the Tenasserim hills and up the valley of the Irrawady to which it gives very heavy to heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then deflected westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and almost daily rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably

be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is:—

May ..	.. 2·6	inches.
June ..	.. 8·3	,,
July ..	..11·9	,,
August ..	..10·5	,,
September	.. 7·2	,,
October ..	.. 3·2	,,

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, *viz.*, May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution:—

	Jan.	Feb.	Mar.	Apl.	May	June
Bay of Bengal	..	..	1	4	13	28

	July	Aug.	Sep.	Oct.	Nov.	Dec.
Bay of Bengal	41	36	45	34	22	8

	Jan.	Feb.	Mar.	Apl.	May	June
Arabian Sea	..	..	..	..	2	15

	July	Aug.	Sep.	Oct.	Nov.	Dec.
Arabian Sea	2	..	1	1	5	..

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces **variations from the normal**, and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are:—

(1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.

(2) A prolonged break in July or August or both.

(3) Early termination of the rains, which may occur in any part of the country.

(4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north-west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region; fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

(*For monsoon of* 1928, *see page* 367).

MONSOON OF 1928.

The S.-W. Monsoon of the year was weak in its incidence throughout the season and though on the whole the rainfall gathered over the major portion of the Continent was fairly normal, that over North-Western India and over the extreme South of the Peninsula remained in serious defect. In the Northern Divisions of the country in Sind, Punjab, United Provinces, and the North-West Frontier Province conditions of drought virtually prevailed throughout all the monsoon months. The current on the Arabian Sea side was established on the Malabar Coast by the 3rd June almost a week later than the normal date. The belated pulses however rapidly extended northwards to the Konkan Coast on the 4th and into the Deccan on the 5th, and vigorously penetrating further into the central parts of the country well on upto Rajputana, gave fairly heavy rains over a major portion of its field of activity. The advance however was not well sustained and though the current continued normally active during the rest the month over the Konkan and in the Deccan, it was too attenuated to be of much effective service in other parts of its field.

The Bay Branch of the current was established and actively advanced into Burma during the last week in May; and further strengthened by a depression rising off the Bay between the 6th and 8th June it caused heavy rains on the Arakan and Chittagong Coasts and carried the monsoon rains well into North-East India between the 10th and the 18th, and into East United Province by the 19th. This branch continued fairly active throughout the month over practically the whole of its field of activity except the United Provinces. The total rainfall during the month averaged over the plains of India was in defect by 5 per cent. Most of the Divisions were fairly well served but as already remarked Sind, Rajputana, Punjab, United Provinces and Madras returned heavy deficiencies respectively of 100, 66, 44, 38 and 28 per cent. for the month.

Conditions in July improved generally under the influence of three depressions rising off the Bay one after another in the first, third and last week of the month, which enable good rains to be gathered all along their tracks extending from south-west Bengal to Guzrat. And though both the branches of the current thus invigorated carried rains well into Central India, Guzrat, Rajputana, Sind and the United Provinces as also into East and North-East Punjab, they were unable to penetrate further and give relief to extreme North and North-West India. Averaged over the whole of India the total fall during July was 3 per cent. in excess. The notable excesses returned were 30 per cent. by Bihar and Orissa, 32 by Central India, and 24 by the Central Provinces; while the notable deficiencies were 74 per cent. in Sind, and 54 per cent. in North-West Frontier Province.

The month of August commenced with almost a complete break in the rains, which lasted almost to the middle of the month over North-West India and the central parts of the Continent, the activity of the monsoon for the time, being confined mainly to Burma, North-East India, and to the South of the Peninsula. The pulses gathered strength once again however about the 16th and carried the rains into the Central Provinces, laboriously working up to North-West India. A depression rising off the Bay about the 24th, which developed into a storm and traversed the Central Provinces and East Rajputana well into the Punjab, atonce stimulated both the branches of the current, and gave heavy rains not only over a wide area all along its track causing floods in parts of West Central India, Rajputana, and in the Punjab, but also strengthened the monsoon current generally over the Konkan and North Deccan. The total fall during the month was 11 per cent. in defect. Rajputana and Mysore were the only Divisions which returned excesses respectively of 24 and 22 per cent., while Sind, North-West Frontier Province, Punjab, United Provinces and Bihar and Orissa returned notable defects, respectively, of 80, 40, 50, 64 and 28 per cent.

In September much the same conditions prevailed. The stimulating effects of the storm late in August kept up the activity of the pulses for a while in the United Provinces and the Central Provinces, the monsoon generally being weak elsewhere. Indications of the retreat of the S.-W. Monsoon from the Punjab became apparent early in the month about the 2nd and from the United Provinces about the 5th, and the weather was practically dry thereafter in these regions. A depression rising off the North Madras Coast and the development of another shallow depression over Hyderabad about the middle of the month considerably affected the circulation, extending the monsoon to the North and Central Deccan, Guzrat and East Rajputana. During the last week, under the influence of yet another disturbance off the North Madras Coast, fairly active monsoon conditions prevailed in North-East India, and the North of the Peninsula. The total fall for the month was in defect by 25 per cent. The only Division returning excess was Hyderabad, the rest returned notable defects.

In October the activity of the retreating monsoon was confined mainly to the central parts and south of the Peninsula. Under the influence of a depression off the Bay on the 2nd, heavy rains were gathered in Orissa, North Madras, United Provinces and the central parts of the country and in northern Deccan. Good rains were also gathered about the middle of the month in the south of the Peninsula, associated with the usual change of conditions on the establishment of the North-East Monsoon. A storm off the Masulipatam Coast on the 20th together with another consequen-

tial disturbance developed off the Konkan Coast on the 23rd caused extensive rains throughout the Peninsula, Central India, and the United Provinces. The progress of this Arabian Sea disturbance northwards to Sind and the Kathiawar coast determined heavy fall all along the west coast and in Guzrat and Sind. The total fall for the month over the whole of India was 54 per cent. in excess.

The total fall for the season June to September averaged over the plains of India was 5 per cent. in defect.

The following table gives detailed information of the rainfall of the period June to September:—

Division.	Rainfall, June to September.			
	Actual.	Normal.	Departure from Normal.	Percentage departure from Normal.
	Inches.	Inches.	Inches.	
Burma	84.5	83.8	+ 0.7	+ 1
Assam	62.2	61.1	+ 1.1	+ 2
Bengal	64.0	60.9	+ 3.1	+ 5
Bihare and Orissa	44.2	45.5	— 1.3	— 3
United Provinces	21.6	36.1	— 14.5	— 40
Punjab	12.0	15.7	— 3.7	— 24
North-West Frontier Province	3.0	5.0	— 2.0	— 40
Sind	0.9	4.7	— 3.8	— 81
Rajputana	16.5	18.1	— 1.6	— 9
Bombay	40.5	36.9	+ 3.6	+ 10
Central India	31.1	33.8	— 2.7	— 8
Central Provinces	37.2	40.5	— 3.3	— 8
Hyderabad	31.1	26.7	+ 4.4	+ 16
Mysore	12.8	15.5	— 2.7	— 17
Madras	21.5	26.3	— 4.8	— 18
Mean of India	37.8	39.6	— 1.8	— 5

INTEREST TABLE.

From 5 to 12 per cent. on Rupees 100.

Calculated for 1 Year, 1 Month (Calendar), 1 Week, and 1 Day (365 Days to a Year), the Decimal Fraction of a Pie for the Day being shown for the Day.

Per cent.	*1 Day.*	*1 Week.*	*1 Month.*	*1 Year.*

To the student of Indian administration nothing is more remarkable than the manner in which great problems arise, produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administrator. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety, and at the first signs of a bad or poor season the famine relief machinery was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the economic condition of the Indian peasantry. Nearly three-quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness, or absence, of the rain-bearing currents, then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season, but western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no railways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fall back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine in 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relief covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prosperity which accompanied the period of high prices. The rapid spread of the co-operative credit movement has mobilised and strengthened rural credit. The spread of manufacturing enterprise has lightened the pressure on the soil. The relation of famine to the question of Indian administration has therefore changed. In an exceptionally bad year it may create administrative difficulties: it has ceased to be an administrative and social problem.

Famine under Native Rule.

Famines were frequent under Native rule, and frightful when they came. "In 1630," says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1631 a Dutch merchant reported that only eleven of the 260 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons; but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, available for the whole of India. In India there is now no such a thing as a food famine; the country always produces enough food for the whole of the population; famine when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.
